

Avaya Solution & Interoperability Test Lab

Application Notes for Etrali Trading Solutions Open Trade with Avaya Communication Server 1000 and Avaya Aura® Session Manager - Issue 1.0

Abstract

These Application Notes describe the configuration steps necessary for provisioning Etrali Trading Solutions Open Trade to successfully interoperate with Avaya Communication Server 1000 Release 7.6 and Avaya Aura® Session Manager R6.3.

Readers should pay attention to section 2, in particular the scope of testing as outlined in Section 2.1 as well as the observations noted in Section 2.2, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe a compliance-tested configuration of the interoperability of Open Trade from Etrali Trading Solutions to successfully interoperate with Avaya Communication Server 1000 Release 7.6 (CS 1000) and Avaya Aura® Session Manager Release 6.3. Etrali Trading Solutions Open Trade is a trading communication platform combining voice, email, instant messaging and video, for communication in fast-moving markets. Open Trade integrates cloud strategy with the back-end localised in the network and makes managing distant sites and turrets easier via remote access and administration. Any Open Trade component can be managed as standard IT equipment.

2. General Test Approach and Test Results

Open Trade is integrated with the CS 1000 using SIP trunks between Open Trade and Session Manager. Session Manager directs the call over SIP trunks to a specific IP address depending on the digits dialled using SIP signalling. Compliance testing was executed manually by making calls to and from extensions on the Open Trade SIP server. The test results and observations are listed in **Section 2.2**.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

2.1. Interoperability Compliance Testing

During interoperability compliance testing the following types of calls were made:

- **Basic Inbound/Outbound** – Tests inbound calls to Open Trade.
- **Call Hold** – Tests held calls to/from Open Trade.
- **Call Transfer** – Tests transferred calls to/from Open Trade.
- **Call Conference** – Tests conferenced calls to/from Open Trade.
- **Call Forward** – Tests forwarded calls to/from Open Trade.
- **Call Information** – Tests caller information (CLID).
- **VoiceMail, DTMF RFC 2833 and Message Notification** – Tests voice message, message notification and DTMF transmission to/from Open Trade.
- **Failover/Serviceability** – Tests the behaviour of Open Trade when there are certain failed conditions.

2.2. Test Results

All tests passed successfully. Below are listed observations following the compliance test of this solution.

1. Open Trade is unable to propagate updates to the display name during after transferring a call. For example, where Avaya1 calls OT1 and OT1 transfers the call to Avaya2, both Avaya1 and Avaya2 show the connected party as OT1.
2. As Open Trade do not support SIP UPDATE, the CS 1000 default configuration will not allow a blind transfer to be executed if the parties involved do not support the SIP UPDATE method. With the installation of plugin 501 on the CS 1000, the blind transfer will be allowed and the call will be completed. The limitation of this plugin is that no ring back is provided to the originator of the call for the duration that the destination set is ringing. The use of plugin 501 does not restrict the use of the SIP UPDATE method of blind transfer to other parties that do happen to support the UPDATE method, but rather extend support to those parties that do not.
3. Open Trade does not support the multipart (MIME) in SIP INVITE message of the CS 1000 therefore the MIME must be removed from the INVITE sent from CS 1000. To remove MIME, an adaptation was created in **Section 5.3** and applied in the Open Trade SIP entity in the Section **5.4.3**.

2.3. Support

For more information on Etrali Trading Solutions Open Trade and product support visit:

- Website: <http://www.etrali.com/>
- Telephone: 0033 (0) 155829348

2.4. Reference Configuration

Figure 1 illustrates the setup used to verify the Open Trade solution with Avaya Aura® Session Manager and Avaya Communication Server 1000. Open Trade is deployed on a dedicated server running Windows 2008 R2 Enterprise server. Session Manager interfaces to Communication Server 1000 using a SIP trunk, and Open Trade interfaces to Session Manager via SIP. To access the Open Trade application, a call is simply routed from Communication Server 1000 to the Open Trade server through Session Manager. Multiple SIP channels were configured on the Open Trade server. Avaya Aura® System Manager was used to configure Session Manager.

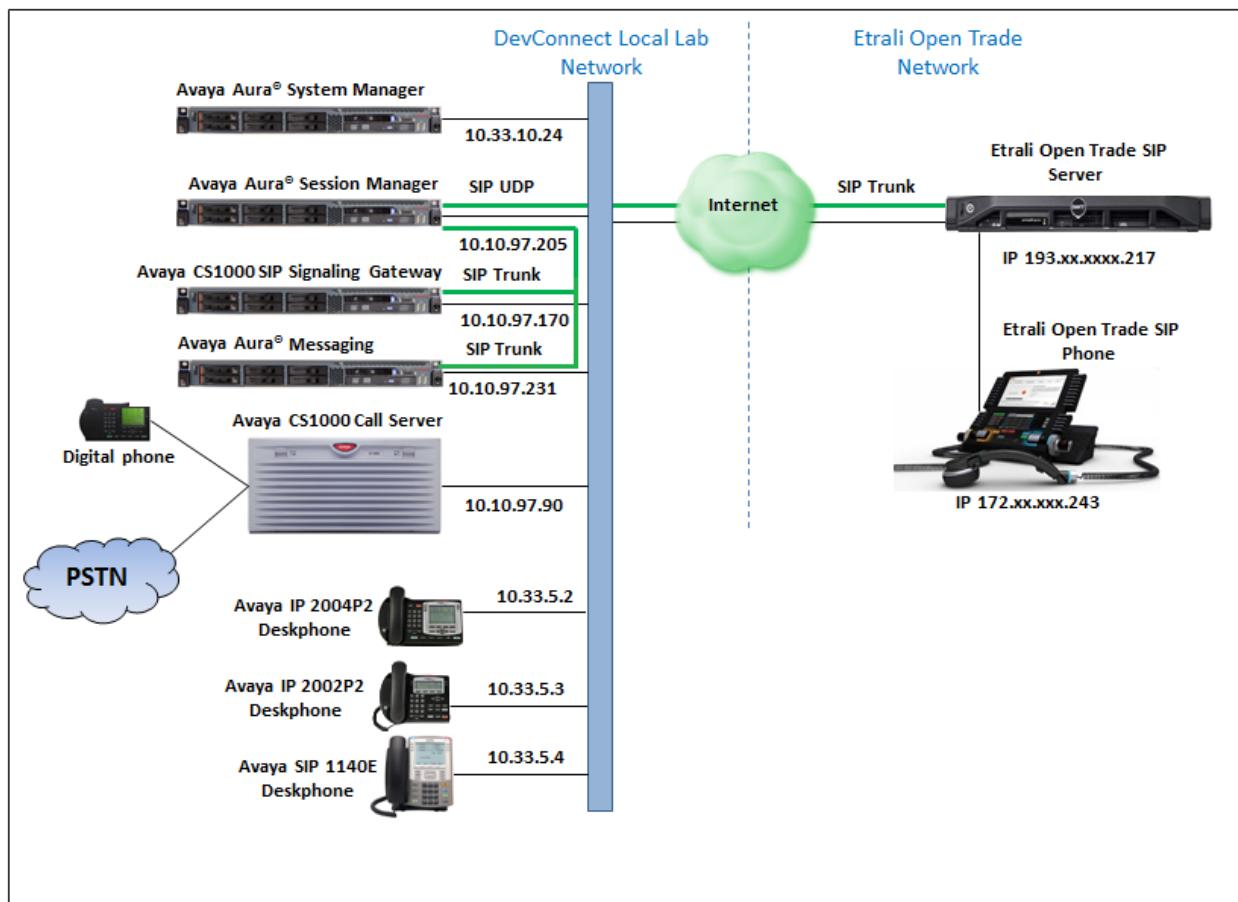

Figure 1: Reference Configuration Diagram

3. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® Session Manager running on S8800 Server	6.3.10 Build No. 6.3.0.0.630002-6.3.7.637004
Avaya Aura® System Manager running on S8800 Server	6.3.10 Build No. 6.3.0.8.5682 - 6.3.8.4514 Software Update Revision: 6.3.10.7.2656
Avaya Communication Server 1000 running on CPPM card	R7.6 Service Pack 5 DepList1 Created 2014-06-24)
Avaya Aura® Messaging running on S8800 Server	6.3.1
Avaya Media Gateway Controller CSP Version Boot Version	MGCC DC03+ MGCB BA18
Avaya 2004P IP Phone	0604DC0
Avaya SIP 1140 IP Phone	4.3
Avaya Digital 3904	N/A
Etrali Open Trade System	4.3.0.5.13
Etrali Open Trade Admin	4.0.11.0

4. Configure Avaya Communication Server 1000

The document assumes that route, trunk and dialing plan of the Avaya CS 1000 have been configured. This section only describes the details on how to configure the Avaya CS 1000 Signaling gateway to connect to the Session Manager via SIP trunk using the Element Manager.

Prerequisites: An Avaya CS1000 server which has been:

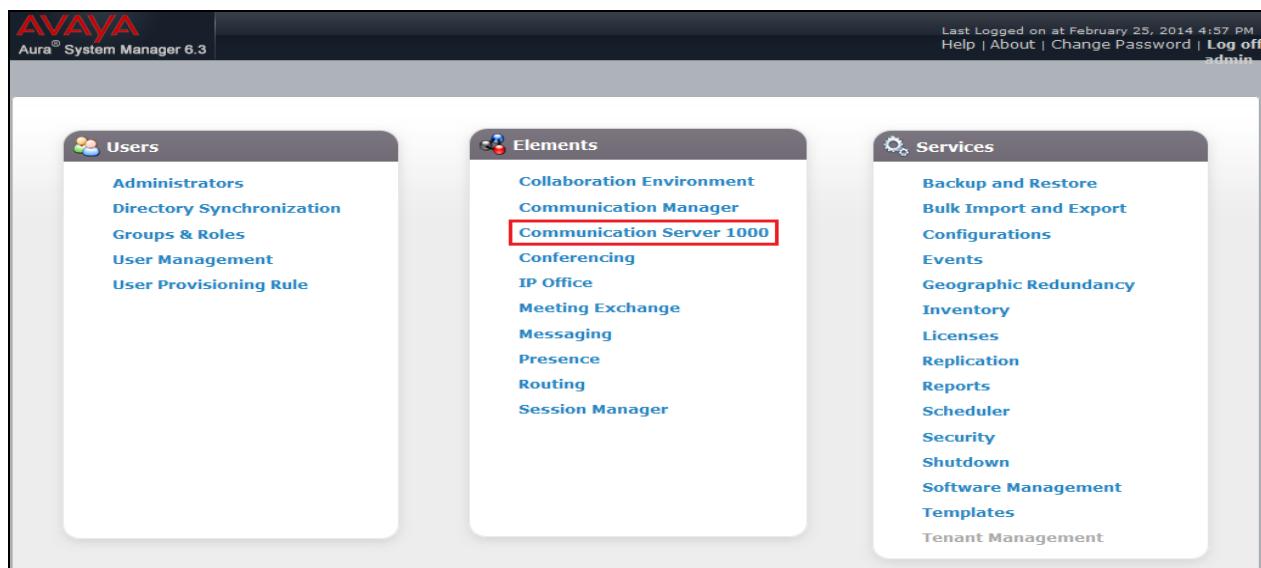

- Installed with CS 1000 Release 7.6 Linux Base.
- Joined CS 1000 Release 7.6 Security Domain.
- Deployed with SIP Trunk Application.

For more information on CS 1000 installation, maintenance, and upgrades, see Section 9. The following software packages are enabled in the key code. If any of these features have not been enabled, please contact your Avaya account team or Avaya technical support at <http://www.avaya.com>.

Package Mnemonic	Package Number	Package Description	Package Type (New or Existing or Dependency)	Applicable Market
SIP	406	SIP Service package	New package	Global
FFC	139	Flexible Feature Codes	Existing package	Global

SIPL_Nortel	415	Avaya SIP Line	Existing package	-
SIPL_3ThirdParty	416	Third Party SIP Line	Existing package	-

Since release 7.6 Avaya CS 1000 Elements is integrated to System Manager, to access the Element Manager of CS 1000 first log in the System Manager. The screen below shows the System Manager home page with **Communication Server 1000** entry in the Elements table. Click on the **Communication Server 1000** to access to CS 1000 Elements, the Elements webpage will be opened in the new window.

The **Elements** page is shown in the following screenshot. Click Element Name of the CS 1000 that needs to be accessed as highlighted in the red box.

Element Name	Element Type	Release	Address	Description
smgr.bwdev.com (primary)	Base OS	7.6	10.33.10.24	Base OS element.
EM on car1-sip1	CS1000	7.6	10.10.97.80	New element.
EM on car2-mas	CS1000	7.6	10.10.97.90	New element.

The following screenshot shows the CS 1000 Element Manager System Overview page.

- [Personal Directories \(PD\)](#)
- [Presence Publisher](#)
- [IP Media Services](#)

Enter the information highlighted in the red-box for the **General** and **SIP Gateway Settings**. All other fields are left as default. Click **Save**. Note: **SIP domain name bwdev.com** should be matched with what was created in **Section 5.1**.

General

Vtrk gateway application: Enable gateway service on this node

SIP domain name: **bwdev.com** (highlighted with a red box)

Local SIP port: 5060 * (1 - 65535)

Gateway endpoint name: car2-cores *

Gateway password:

Application node ID: 2001 * (0-9999)

Enable failsafe NRS:

Note: Failsafe NRS will be enabled only on those servers in the node where NRS application is not deployed.

Virtual Trunk Network Health Monitor

Monitor IP addresses (listed below)
Information will be captured for the IP addresses listed below.

Monitor IP: Add

Monitor addresses:

Remove

The **Primary TLAN IP address** is the IP address used in **Section 5.4.1** which is the Session Manager IP address 10.10.97.205

Proxy Or Redirect Server:

Proxy Server Route 1:

Primary TLAN IP address: **10.10.97.205** (highlighted with a red box)

The IP address can have either IPv4 or IPv6 format based on the value of "TLAN address type"

Port: **5060** * (1 - 65535) (highlighted with a red box)

Transport protocol: **UDP** *

Options: Support registration
 Primary CDS proxy

Secondary TLAN IP address: **0.0.0.0**

The IP address can have either IPv4 or IPv6 format based on the value of "TLAN address type"

Port: **5060** * (1 - 65535)

Transport protocol: **TCP** *

On the same page, scroll-down the parameters box to the **SIP URI Map** section. Under the **Private domain names** subsection, leave all fields as default, which has the phone context **cdp.udp** in the **CDP** field.

The screenshot shows the CS1000 Element Manager interface. On the left, there's a navigation tree with items like UCM Network Services, Home, Links, System, and IP Network. The IP Network node is expanded, showing Nodes, Servers, Media Car, Maintenance and Reports, Media Gateways, Zones, Host and Route Tables, Network Address Translation, QoS Thresholds, Personal Directories, and Unicode Name Directory. The 'Nodes: Servers, Media Car' node is selected. The main panel displays 'Node ID: 2001 - Virtual Trunk Gateway Configuration Details'. Under the 'SIP URI Map' section, there are fields for Public E.164 domain names (National, Subscriber, Special number, Unknown) and Private domain names (CDP). The 'CDP' field is highlighted with a red box. Other fields include Special number, Vacant number, and Unknown.

Afterwards, click **Save**, the system will bring back the **Node ID** page (not shown). Then click **Save** button on the **Node ID** page and that will take the user to the **Node Saved** page (not shown). Click on the **Transfer Now** button, when finished it will bring the user to the **Synchronize Configuration Files** page. Then click **Start Sync** button (not shown) to complete the configuration saved process.

The screenshot shows the 'Synchronize Configuration Files (Node ID <2001>)' page. It includes a note about selecting components to synchronize their configuration files. A table lists components: 'car2-cores' (Type: Signaling_Server, Applications: SIP Line, LTPS, Gateway (SIP/H323), PD, Presence, Publisher, IP Media Services). The 'Sync required' status is indicated. Buttons for Start Sync, Cancel, and Restart Applications are at the top, along with Print and Refresh links. A note at the bottom states: '* Application restart is only required for initial system configuration or if changes have been made to general LAN configurations, SNTP settings, SIP and H323 Gateway settings, network connectivity related parameters like ports and IP address, enabling or disabling services, or adding or removing application servers.'

5. Configure Avaya Aura® Session Manager

This section provides the procedures for configuring Session Manager. The procedures include adding the following items:

- SIP domain.
- Logical/physical Locations that can be occupied by SIP Entities.
- SIP Entities corresponding to Session Manager and Communication Server 1000.
- Entity Links, which define the SIP trunk parameters used by Session Manager when routing calls to/from SIP Entities.
- Routing Policies, which control call routing between the SIP Entities.
- Dial Patterns, which govern to which SIP Entity a call is routed.

Configuration is accomplished by accessing the browser-based GUI of System Manager using the URL “<https://<ip-address>>”, where <ip-address> is the IP address of System Manager. Log in with the appropriate credentials (not shown).

5.1. Specify SIP Domain

Add the SIP domain for which the communications infrastructure will be authoritative. From the home page of System Manager, navigate to **Elements → Routing**, the Routing page will be displayed, select **Domains** on the left and click the **New** button on the right (not shown). The following screen will then be shown. Fill in the following:

- **Name:** The authoritative domain name (e.g., **bvwdev.com**).
- **Type:** Select **sip** in the dropdown menu.
- **Notes:** Descriptive text (optional).

Click **Commit**.

Since the sample configuration does not deal with any other domains, no additional domains need to be added.

Name	Type	Notes
* bvwdev.com	sip	SIP domain in SM Interop

5.2. Add Locations

Locations can be used to identify logical and/or physical locations where SIP Entities reside for purposes of bandwidth management. To add a location, select **Locations** on the left and then click the **New** button on the right (not shown). The following screen will then be shown. Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **Notes**: Descriptive text (optional).

The screenshot shows the 'Location Details' screen in the Avaya Aura System Manager. The 'General' tab is selected. The 'Name' field is populated with 'Belleville' and has a red border around it, indicating it is a required field. The 'Notes' field is empty. Below the general section, there is a section titled 'Dial Plan Transparency in Survivable Mode' with an 'Enabled' checkbox checked. There are also fields for 'Listed Directory Number' and 'Associated CM SIP Entity'. At the bottom, there are sections for 'Overall Managed Bandwidth' (with dropdowns for 'Managed Bandwidth Units' set to 'Kbit/sec' and 'Total Bandwidth' and 'Multimedia Bandwidth' both empty) and 'Audio Calls Can Take Multimedia' (with a checked checkbox). The top right corner shows the user is 'admin' and last logged on at November 6, 2014, 7:50 AM.

- Under **Location Pattern**:
 - **IP Address Pattern**: A pattern used to logically identify the location.
 - **Notes**: Descriptive text (optional).

The screen below shows addition of a location which includes the CS 1000 and Session Manager. Click **Commit** to save the Location definition.

The screenshot shows the 'Location Pattern' screen with four items listed. The table has columns for 'IP Address Pattern' and 'Notes'. The entries are:

IP Address Pattern	Notes
* 10.33.10.0	
* 10.33.5.0	
* 10.10.97.0	
* 10.10.98.0	

A 'Select : All, None' button is at the bottom left. A 'Filter: Enable' link is at the top right.

5.3. Configure Adaptations

To configure a new Adaptation select **Adaptations** from the left window and click on **New** (now shown) from the main window.

Enter a descriptive name in the **Adaptation Name** and select **CS1000Adapter** for the **Module Name**. Select **Name-Value Parameter** as the **Module Parameter Type**. Add the following Parameters: MIME = no.

Click on **Commit** once completed.

The screenshot shows the Avaya Aura System Manager 6.3 interface. The top navigation bar includes the Avaya logo, the title 'Aura® System Manager 6.3', the date 'Last Logged on at November 6, 2014 7:50 AM', and user information 'Log off admin'. The main menu on the left is under the 'Routing' tab, with 'Adaptations' selected. The current page is 'Adaptations' under 'Routing'. The 'General' tab is active. The 'Adaptation Details' section contains fields for 'Adaptation Name' (set to 'Remove-MIME'), 'Module Name' (set to 'CS1000Adapter'), and 'Module Parameter Type' (set to 'Name-Value Parameter'). Below these are 'Add' and 'Remove' buttons and a table for parameters. The table has one row with 'Name' set to 'MIME' and 'Value' set to 'no'. There is also a note field at the bottom.

5.4. Add SIP Entities

In the sample configuration, a SIP Entity is added for Session Manager, CS 1000, and Open Trade system.

5.4.1. Session Manager SIP Entity

A SIP Entity must be added for Session Manager. To add a SIP Entity, select **SIP Entities** on the left and click on the **New** button on the right (not shown). The following screen is displayed.

Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **FQDN or IP Address**: IP address of the signaling interface on Session Manager.
 - **Type**: Select **Session Manager**.
 - **Location**: Select the location defined previously.
 - **Time Zone**: Time zone for this location.

The screenshot shows the 'SIP Entity Details' page in the Avaya Aura System Manager. The 'General' section is highlighted with a red box. Inside this box, the following fields are visible:

- * Name: InteropSM
- * FQDN or IP Address: 10.10.97.205
- Type: Session Manager
- Notes: Session Manager for interop
- Location: Belleville
- Outbound Proxy: (empty dropdown)
- Time Zone: America/Toronto
- Credential name: (empty input field)

Scroll down **Port** section, click on **Add** button to add a new port and protocol for this port and select the domain respectively for the port as shown in the figure below. In the compliance test, port 5060 UDP was used.

Defaults can be used for the remaining fields. Click Commit to save each SIP Entity definition.

The screenshot shows the 'Port' configuration screen. At the top, there are two input fields for 'TCP Failover port' and 'TLS Failover port', both currently empty. Below these are 'Add' and 'Remove' buttons. The main area displays a table titled '3 Items' with a 'Filter: Enable' link. The table has columns: Port, Protocol, Default Domain, and Notes. The data is as follows:

	Port	Protocol	Default Domain	Notes
<input type="checkbox"/>	5060	TCP	bvwdev.com	
<input type="checkbox"/>	5060	UDP	bvwdev.com	
<input type="checkbox"/>	5061	TLS	bvwdev.com	

At the bottom left, there is a 'Select : All, None' link.

5.4.2. Communication Server 1000 SIP Entity

A SIP Entity must be added for the CS 1000. To add a SIP Entity, select SIP Entities on the left and click on the New button on the right (not shown). The following screen is displayed. Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **FQDN or IP Address**: Enter the IP address of the SIP gateway node IP.
 - **Type**: Select **SIP Trunk**.
 - **Location**: Select the location defined previously.
 - **Time Zone**: Time zone for this location.

Defaults can be used for the remaining fields. Click Commit to save each SIP Entity definition.

The screenshot shows the 'SIP Entity Details' configuration page. The 'General' section is highlighted with a red box. The fields in this section are:

- * Name: car2-cores
- * FQDN or IP Address: 10.10.97.170
- Type: SIP Trunk
- Notes: (empty)
- Adaptation: (empty)
- Location: Belleville
- Time Zone: America/Toronto
- * SIP Timer B/F (in seconds): 4
- Credential name: (empty)
- Call Detail Recording: egress

5.4.3. Etrali Open Trade SIP Entity

A SIP Entity must be added for Open Trade. To add a SIP Entity, select SIP Entities on the left and click on the **New** button on the right (not shown). The following screen is displayed. Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **FQDN or IP Address**: Enter Open Trade IP address.
 - **Type**: Select **Other**.
 - **Adaptation**: Select the adaption **Remove-MIME** in **Section 5.3**.
 - **Location**: Select the location defined previously.
 - **Time Zone**: Time zone for this location.

Defaults may be used for the remaining fields. Click **Commit** to save each SIP Entity definition.

The screenshot shows the Avaya System Manager 6.3 interface. The top navigation bar includes the Avaya logo, system name, last logon information, and user admin. The main window has a breadcrumb trail: Home / Elements / Routing / SIP Entities. On the left, a sidebar under the Routing category lists: Domains, Locations, Adaptations, **SIP Entities**, Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The central panel is titled "SIP Entity Details" and "General". It contains the following fields:

- * Name: OpenTrade
- * FQDN or IP Address: 193. [redacted] .217
- Type: Other
- Notes: [empty]
- Adaptation: Remove-MIME
- Location: Belleville
- Time Zone: America/Toronto
- * SIP Timer B/F (in seconds): 4
- Credential name: [empty]
- Call Detail Recording: none
- CommProfile Type Preference: [empty]

Fields for Name, FQDN/IP, Type, Adaptation, Location, and Time Zone are highlighted with a red border.

5.5. Add Entity Links

The SIP trunk from Session Manager to CS 1000 and Open Trade are described by Entity Links. To add an Entity Link, select Entity Links on the left and click on the New button on the right (not shown). Fill in the following fields in the new row that is displayed:

- **Name**: A descriptive name.
- **SIP Entity 1**: Select the Session Manager.
- **Protocol**: Select the appropriate protocol.
- **Port**: Port number to which the other system sends SIP requests.

- **SIP Entity 2:** Select the name of CS 1000 or Open Trade.
- **Port:** Port number on which the other system receives SIP requests.
- **Trusted:** Select Trusted.

The following screens display the two Entity Links. The first entity link is for Session Manager and CS 1000. The second entity link is for Session Manager and Open Trade.

This screenshot shows the 'Entity Links' configuration screen in Avaya System Manager 6.3. The left sidebar is titled 'Routing' and includes options like Domains, Locations, Adaptations, SIP Entities, Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main panel title is 'Entity Links' with a 'Commit' and 'Cancel' button. A table header '1 Item' and 'Filter: Enable' is shown. The table has columns: Name, SIP Entity 1, Protocol, Port, SIP Entity 2, DNS Override, Port, and Connection Policy. One row is listed: Name is 'InteropSM_car2-cores_5', SIP Entity 1 is 'InteropSM', Protocol is 'UDP', Port is '5060', SIP Entity 2 is 'car2-cores', and Connection Policy is 'trusted'. A note at the bottom says 'Select : All, None'.

The entity link is below between Session Manager and Open Trade.

This screenshot shows the 'Entity Links' configuration screen in Avaya System Manager 6.3. The left sidebar is titled 'Routing' and includes options like Domains, Locations, Adaptations, SIP Entities, Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main panel title is 'Entity Links' with a 'Commit' and 'Cancel' button. A table header '1 Item' and 'Filter: Enable' is shown. The table has columns: Name, SIP Entity 1, Protocol, Port, SIP Entity 2, DNS Override, Port, and Connection Policy. One row is listed: Name is 'InteropSM_OpenTrade_5', SIP Entity 1 is 'InteropSM', Protocol is 'UDP', Port is '5060', SIP Entity 2 is 'OpenTrade', and Connection Policy is 'trusted'. A note at the bottom says 'Select : All, None'.

5.6. Add Routing Policy

Routing policies describe the conditions under which calls will be routed to the SIP Entities. Two routing policies were added – one for Communication Server 1000 and one for Open Trade. To add a routing policy, select **Routing Policies** on the left and click on the New button on the right (not shown). The following screen is displayed. Fill in the following:

- Under **General:** Enter a descriptive name in Name.
- Under **SIP Entity as Destination:** Click **Select**, and then select the appropriate SIP entity to which this routing policy applies.

Defaults can be used for the remaining fields. Click **Commit** to save each Routing Policy definition. The following screen shows the Routing Policy for CS 1000.

Routing Policy Details

General

- * Name: To-car2-cores
- Disabled:
- * Retries: 0
- Notes:

SIP Entity as Destination

Name	FQDN or IP Address	Type	Notes
car2-cores	10.10.97.170	SIP Trunk	

Time of Day

Ranking	Name	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Start Time	End Time	Notes
0	24/7	<input checked="" type="checkbox"/>	00:00	23:59	Time Range 24/7						

The following screen shows the Routing Policy for Open Trade.

Routing Policy Details

General

- * Name: To-OpenTrade
- Disabled:
- * Retries: 0
- Notes:

SIP Entity as Destination

Name	FQDN or IP Address	Type	Notes
OpenTrade	193.0.0.217	Other	

5.7. Add Dial Pattern

Dial patterns must be defined that will direct calls to the appropriate SIP Entity. In the sample configuration, 4-digit extensions beginning with “4” reside on CS 1000, extension 51xx is the Open Trade number. To add a dial pattern, select Dial Patterns on the left and click on the New button on the right (not shown). Fill in the following:

Under General:

- **Pattern:** Dialed number or prefix.
- **Min:** Minimum length of dialed number.
- **Max:** Maximum length of dialed number.
- **SIP Domain:** Select **bvwdev.com** SIP domain as defined in **Section 6.1**.
- Under Originating Locations and Routing Policies: Click Add, and then select the appropriate location and routing policy from the list.

Default values can be used for the remaining fields. The following screen shows the dial pattern definitions for local extensions on CS 1000. Click **Commit** to save this dial pattern.

The following screen shows the dial pattern definition for Communication Server 1000 extensions beginning with “4”.

The screenshot displays the 'Dial Pattern Details' configuration page. The 'General' section contains the following settings:

- Pattern:** 4
- Min:** 4
- Max:** 4
- Emergency Call:** (checkbox)
- Emergency Priority:** 1
- Emergency Type:** (dropdown menu)
- SIP Domain:** bvwdev.com
- Notes:** (text input field)

The 'Originating Locations and Routing Policies' section shows a table with one item:

Originating Location Name	Routing Policy Name	Rank	Routing Policy Disabled	Routing Policy Destination	Routing Policy Notes
Belleville	To-car2-cores	0	(checkbox)	car2-cores	

The following screen shows the dial pattern definition for the Open Trade.

The screenshot displays the 'Dial Pattern Details' configuration screen. On the left, a navigation tree under 'Routing' includes 'Domains', 'Locations', 'Adaptations', 'SIP Entities', 'Entity Links', 'Time Ranges', 'Routing Policies', 'Dial Patterns', 'Regular Expressions', and 'Defaults'. The 'Dial Patterns' item is selected. The main panel shows 'Dial Pattern Details' with tabs for 'General' and 'Originating Locations and Routing Policies'. In the 'General' tab, fields include 'Pattern' (51), 'Min' (4), 'Max' (4), 'Emergency Call' (unchecked), 'Emergency Priority' (1), 'Emergency Type' (empty), 'SIP Domain' (bvwdev.com), and 'Notes' (empty). The 'SIP Domain' field and the 'SIP Domain' dropdown in the 'Originating Locations and Routing Policies' table are highlighted with red boxes. The 'Originating Locations and Routing Policies' table has an 'Add' button and shows one item: 'Belleville' in the 'Originating Location Name' column, 'To-OpenTrade' in the 'Routing Policy Name' column, and 'OpenTrade' in the 'Routing Policy Destination' column. A 'Filter: Enable' button is also present.

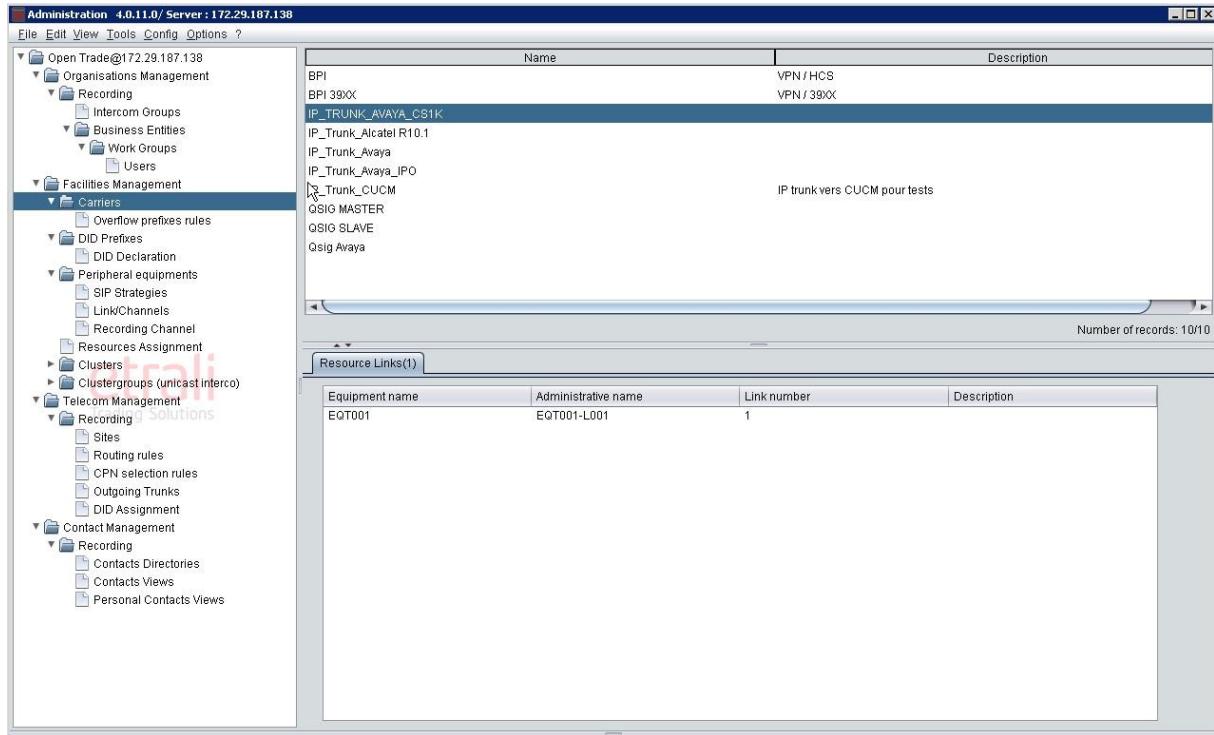

6. Configuration of Etrali Trading Solutions Open Trade

Start the Open Trade Administration program, and log in with the appropriate credentials.

6.1. Create Carrier

Expand the **Facilities Management** icon and select the **Carriers** menu element. Place the cursor under the **Name** pane header and right-click the mouse.

Select **Create** from the menu which appears.

Enter an appropriate **Name** and **Description** and click **Ok**.

6.2. Create DID Prefixes

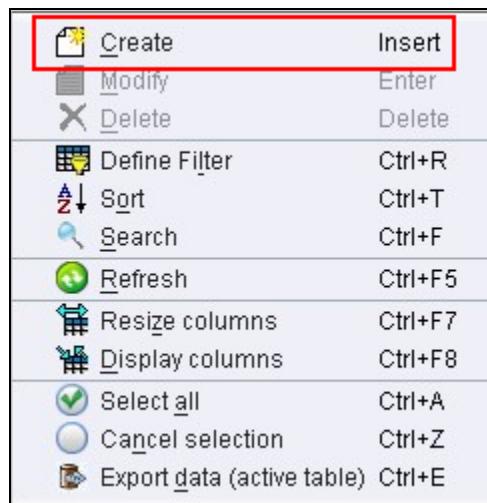

Expand the **DID Prefixes** menu item. Place the cursor in the **DID prefix** pane and right-click the mouse.

The screenshot shows the Administration 4.0.11.0 software interface. The left sidebar has a tree view with nodes like 'Open Trade@172.29.187.138', 'Organisations Management', 'Facilities Management', and 'DID Prefixes'. The 'DID Prefixes' node is expanded, showing sub-nodes like 'DID Declaration', 'Peripheral equipments', 'Resources Assignment', 'Clusters', 'Clustergroups (unicast interco)', 'Telecom Management', and 'Contact Management'. The main pane shows a table with the following data:

DID prefix	Description
UPC	
SIP TRUNK	
QSIG MASTER	
QSIG SLAVE	
5100	
SIP_AVAYA	
6500	DID tests Cisco Call Manager RYMA

At the bottom of the main pane, there are buttons for 'DID', 'Links', and 'Filtered names'. A status bar at the bottom right says 'Number of records: 7/7'.

Select **Create** from the menu which appears.

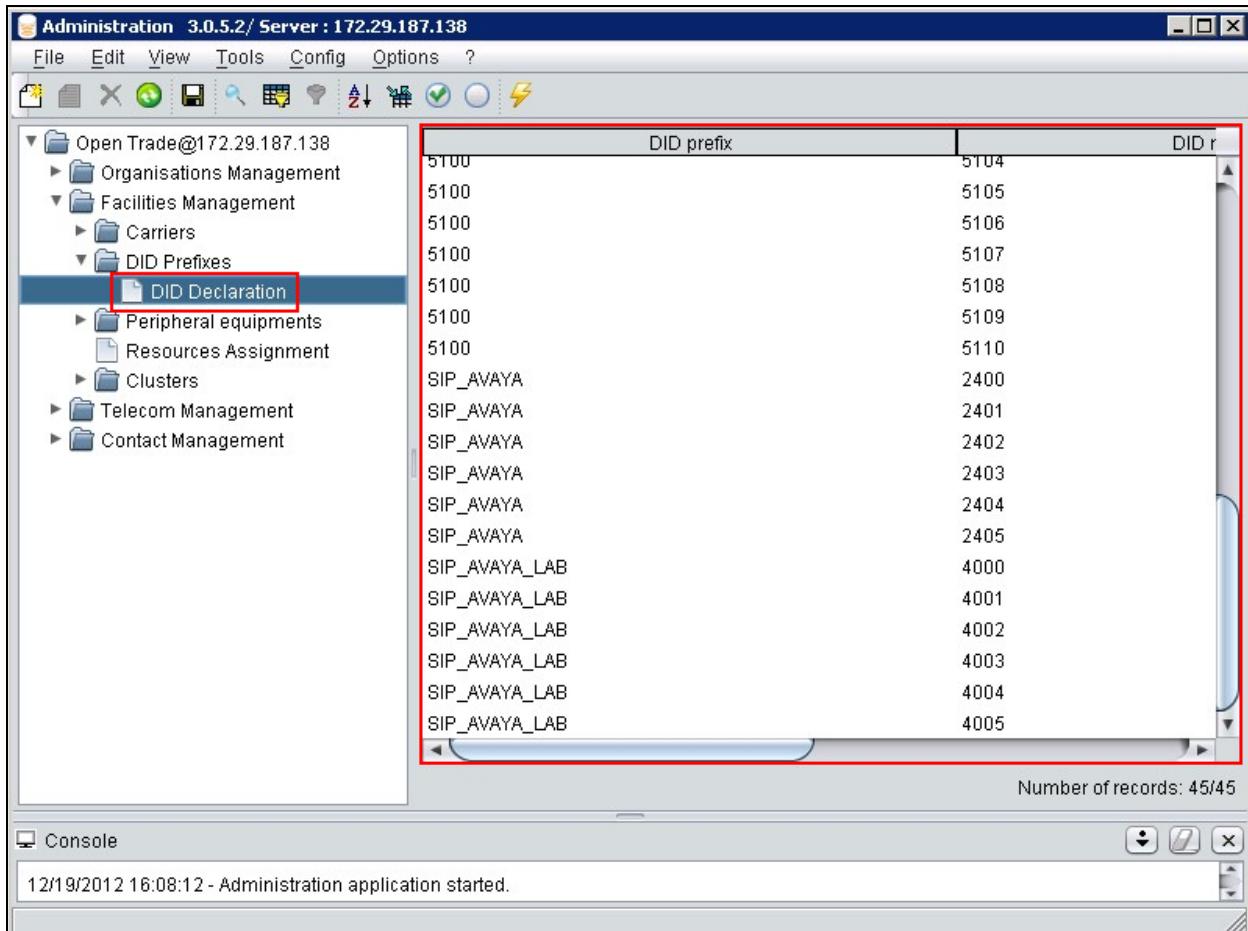

Enter an identifying name in the **DID prefix** field and click **Add**.

6.3. Create DID Declaration

Expand the **DID Declaration** menu item. Place the cursor under the first blank entry in the **DID prefix** pane and right-click the mouse.

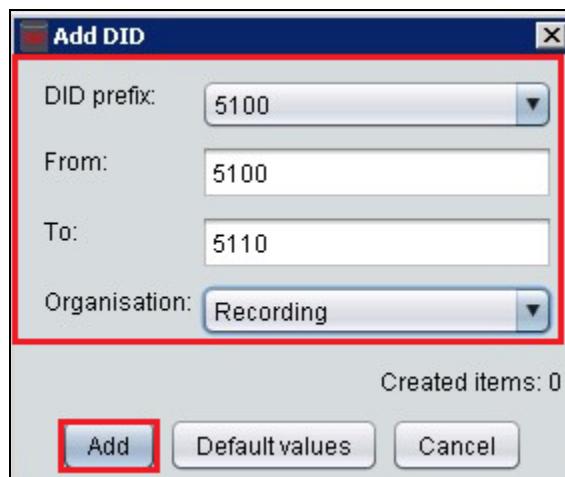

Select **Create** from the menu which appears.

Enter the following values in the **Add DID** screen which appears and click **Add**.

- **DID prefix** – select the DID Prefix created in **Section 8.2**.
- **From** – enter the first number of the range of numbers Open Trade will receive call for. In this case, **5100**.
- **To** – enter the last number of the range of numbers Open Trade will receive calls for. In this case, **5110**.
- **Organization** – select the name of the appropriate Organization from the drop-down menu, this is preconfigured and the details are not covered in these Application Notes.

6.4. Create SIP Strategies

Navigate to Facilities Management → Peripheral equipments → SIP Strategies.

Str.	Strategy Name	Inhe.	Su.	U.	S.	N.	O.	Req.	Fro...	To...	Tl...	Mi...	DTM...	D...	D...	R...	Su...	Su...	R...	Di...	Hi...	Di...	I...	C...	Med...	Loc...	Re...

6.5. Create Peripheral Equipment

This section relates to the Avaya components from/to SIP traffic will be routed. Expand the **Peripheral equipments** menu item. Place the cursor under the first blank entry in the right-hand pane and right-click the mouse.

The screenshot shows the Administration 4.0.11.0 interface with the following details:

- Left Panel (Tree View):** Shows the navigation tree with the "Peripheral equipments" node expanded, revealing options like SIP Strategies, LinkChannels, Recording Channel, Resources Assignment, Clusters, Clustergroups (unicast interco), Telecom Management, and Contact Management.
- Right Panel (Table View):** A table listing peripheral equipment entries. The columns are: Logical name, Domain, Equipment na., Manufacturer, Product, Strategy, IP Address / FQDN, SIP-X, and Link. The data is as follows:

Logical name	Domain	Equipment na..	Manufacturer	Product	Strategy	IP Address / FQDN	SIP-X	Link
EQT003		EQT003	ALCATEL	OXE 10.1	ALCATEL_IPBX	172.16.21.177	CLUSTER01... 1	
EQT008		EQT008	AVAYA	AVAYA AURA	AVAYA_IPBX	172.16.27.140	CLUSTER01... 1	
EQT001		EQT001	ITSP	UPC	CUSTOM_001	bwwdev.com	CLUSTER01... 1	
EQT002		EQT002	CISCO	CALL MANAGER	CUCM_IPBX	172.29.184.2	CLUSTER01... 1	
EQT004		EQT004	AVAYA	AVAYA AURA	AVAYA_IPBX	172.16.27.134	CLUSTER01... 1	

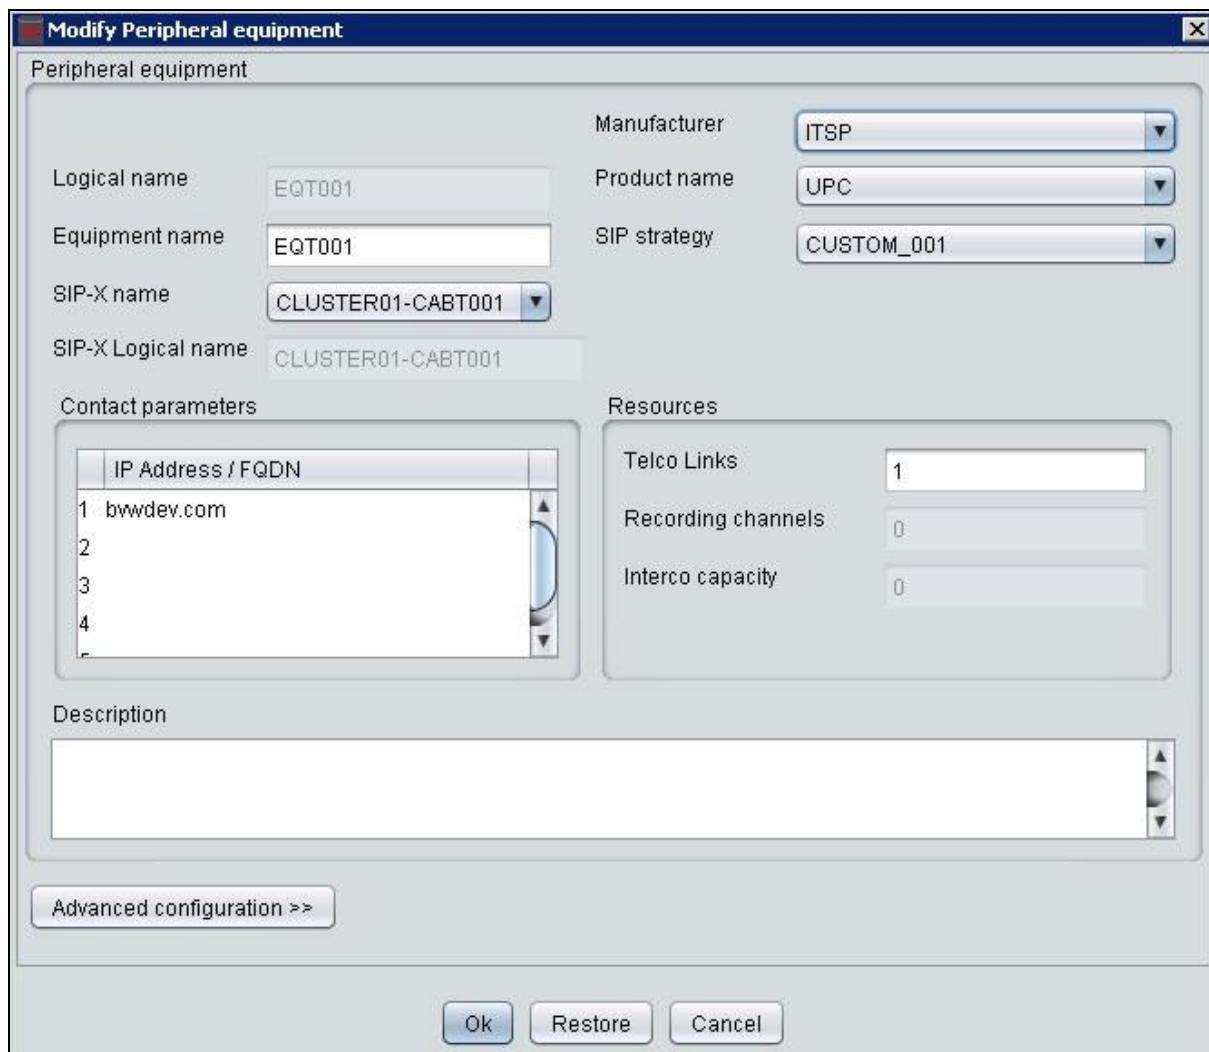

Number of records: 5/5

Select **Create** from the menu which appears.

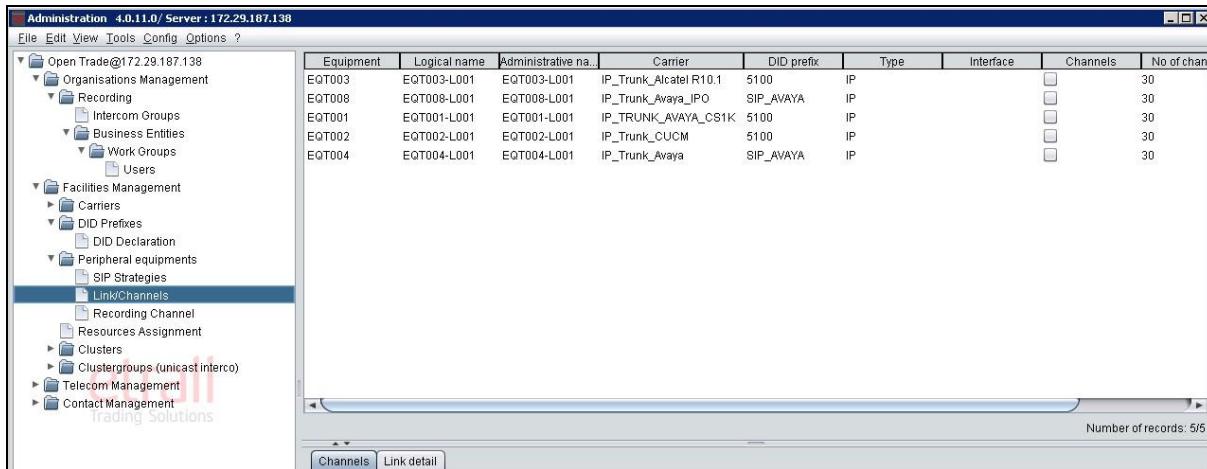

Enter the following values in the **Add Peripheral equipment** screen which appears and click **Add**.

- **Manufacturer** – select **ITSP** from the drop down list.
- **Product name** – select **UPC** from the drop down list.
- **SIP Strategy** – select **CUSTOM_001** from the drop down list. (Created in section 6.4 : create strategies)
- **Equipment name** – enter an identifying name.
- **IP Address or Hostname** – enter the IP address or FQDN of Session Manager.
- **Telco links** – enter **1**.

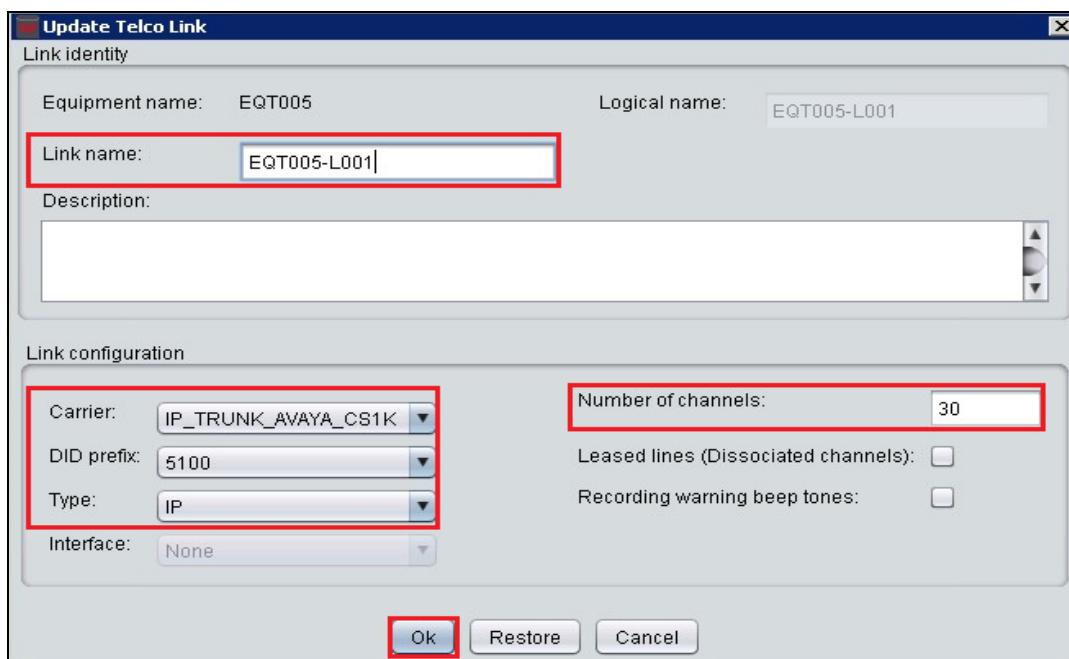

6.6. Create Link/Channels

Expand the **Link/Channels** menu item and double click the newly created Equipment created in **Section 6.4**.

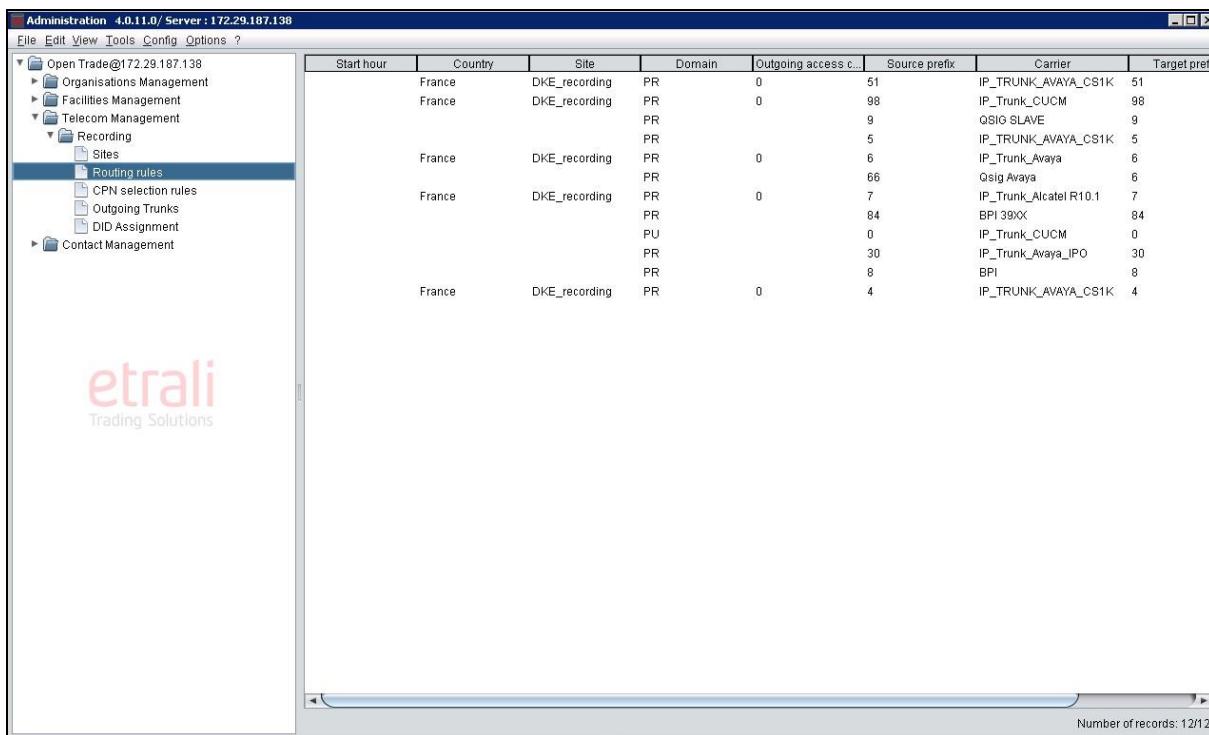

Enter the following values in the **Update Telco Link** screen which appears and click **Ok**.

- Link name** – enter an identifying name.
- Carrier** – select the Carrier created in **Section 6.1**.
- DID prefix** – select the DID prefix created in **Section 6.2**.
- Type** – select **IP** from the drop down list.
- Number of channels** – enter **30**.

6.7. Create Routing Rule

Expand the **Telecom Management** item and select the **Routing rules** menu element. Place the cursor under the first blank entry in the right hand pane and right-click the mouse to create a new routing rule to Session Manager.

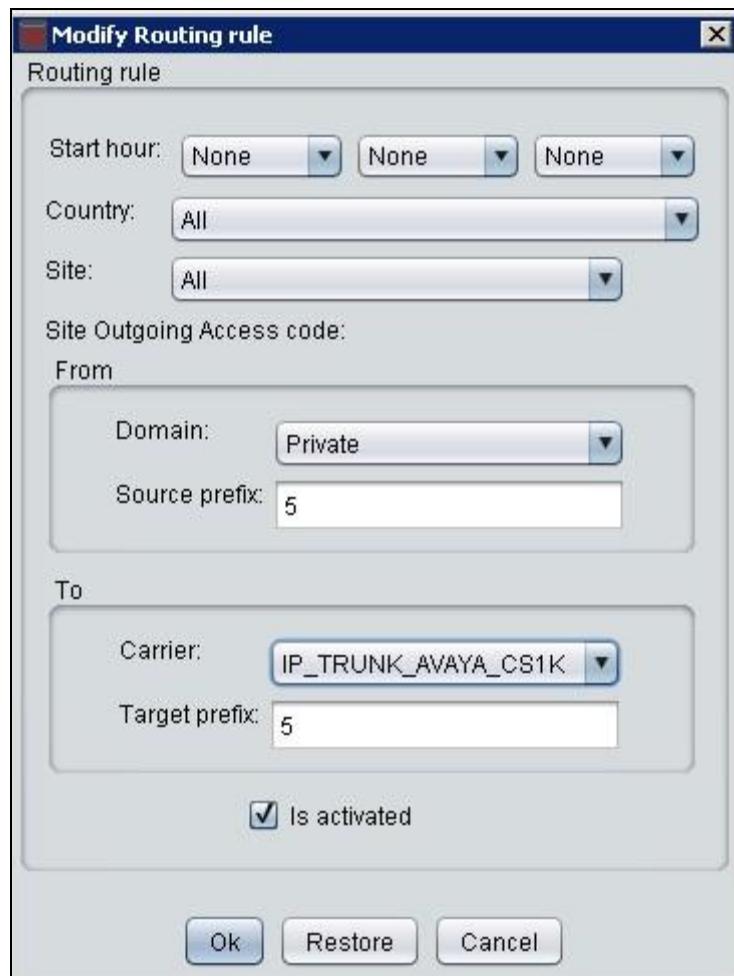

Select **Create** from the menu which appears.

Enter the following values in the **Modify Routing rule** screen which appears and click **Ok**.

- **Domain** – select **Private** from the drop down list.
- **Source prefix** – enter the first digit of the extension range configured for Avaya endpoints.
- **Carrier** – enter the Carrier configured in **Section 6.1**.
- **Target prefix** - enter the first digit of the extension range configured for Avaya endpoints.

6.8. Create Outgoing Trunk

Expand the **Telecom Management** and **Recording** items and select the **Outgoing Trunks** menu element. Place the cursor under the first blank entry in the right hand pane and right-click the mouse to create a new outgoing trunk to the Avaya solution.

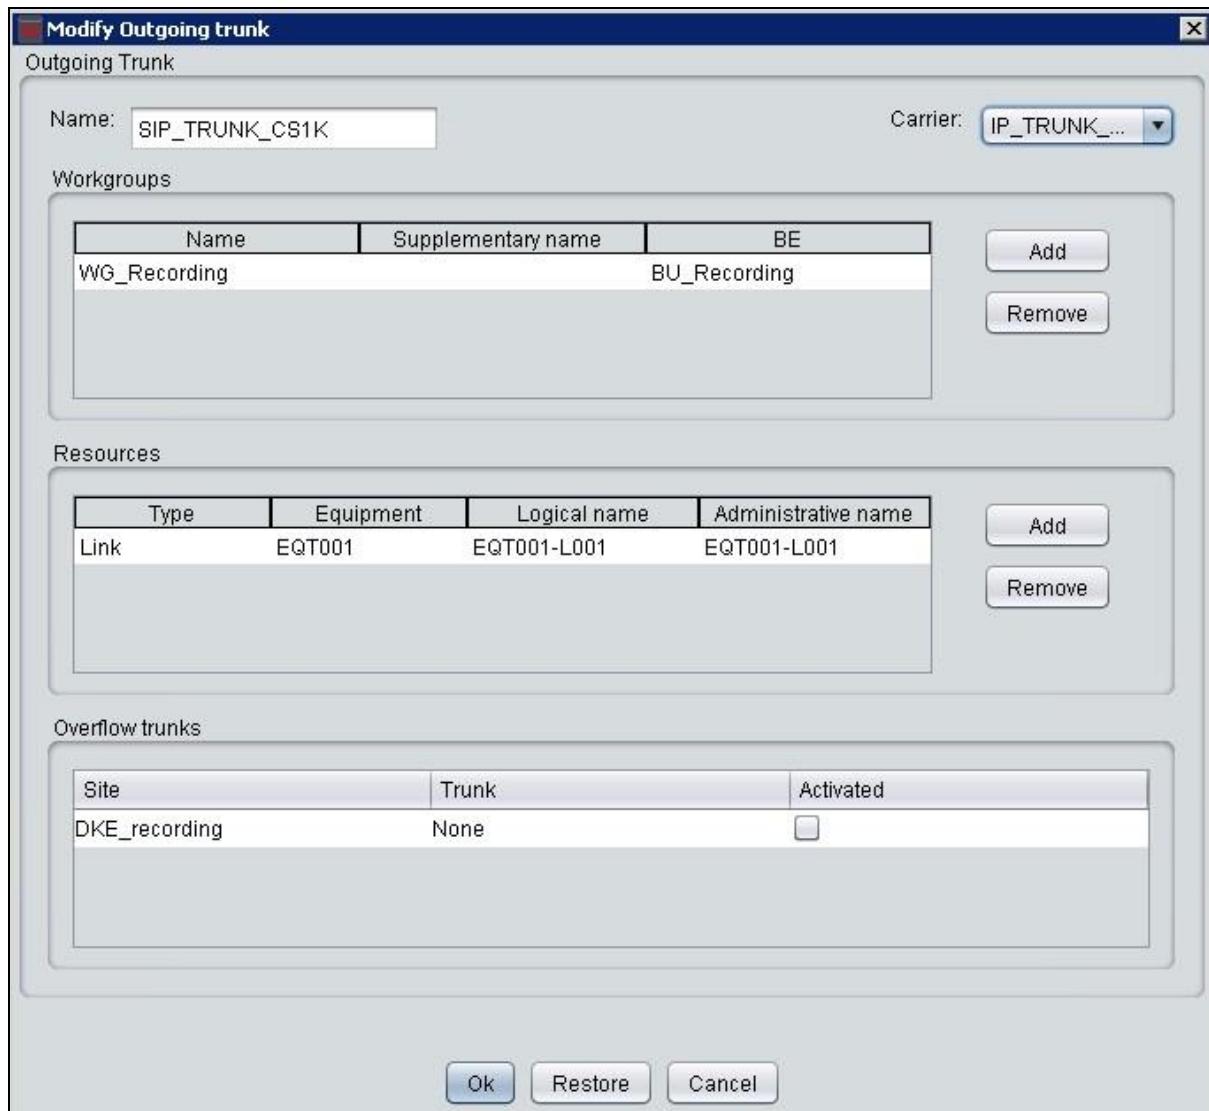

The screenshot shows the Administration 4.0.11.0 software interface. The left sidebar has a tree view with nodes like Open Trade@172.29.187.138, Organisations Management, Facilities Management, Telecom Management (expanded), Recording (expanded), and Contact Management. Under Recording, Outgoing Trunks is selected. The main pane displays a table of outgoing trunks with columns for Name and Carrier. The table includes entries such as SIP_TRUNK_AVAYA_IPO, Qsig Avaya, MASTER TRUNK, TRUNK SLAVE, SIP_TRUNK_CUCM, SIP_TRUNK_AVAYA, SIP_TRUNK_ALCATEL, SIP_TRUNK_HCS, SIP_TRUNK_39XX, and SIP_TRUNK_CS1K. The carrier column lists IP_Trunk_Avaya_IPO, Qsig Avaya, QSIG MASTER, QSIG SLAVE, IP_Trunk_CUCM, IP_Trunk_Avaya, IP_Trunk_Alcatel R10.1, BPI, BPI 39XX, and IP_Trunk_AVAYA_CS1K. The bottom navigation bar has tabs for Resources, Overflow trunks, and Workgroups.

Select “Create” from the menu which appears.

Enter the following values in the **Create Outgoing trunk** screen which appears and click **Ok**.

- **Name** – Enter a suitable name for the outgoing trunk.
- **Carrier** – select the carrier created in **Section 6.1** from the drop down list.
- **Workgroup** – add the appropriate Workgroup from the drop-down menu, this is preconfigured and the details are not covered in these Application Notes.
- **Resources** – add the peripheral equipment created in **Section 6.4**.

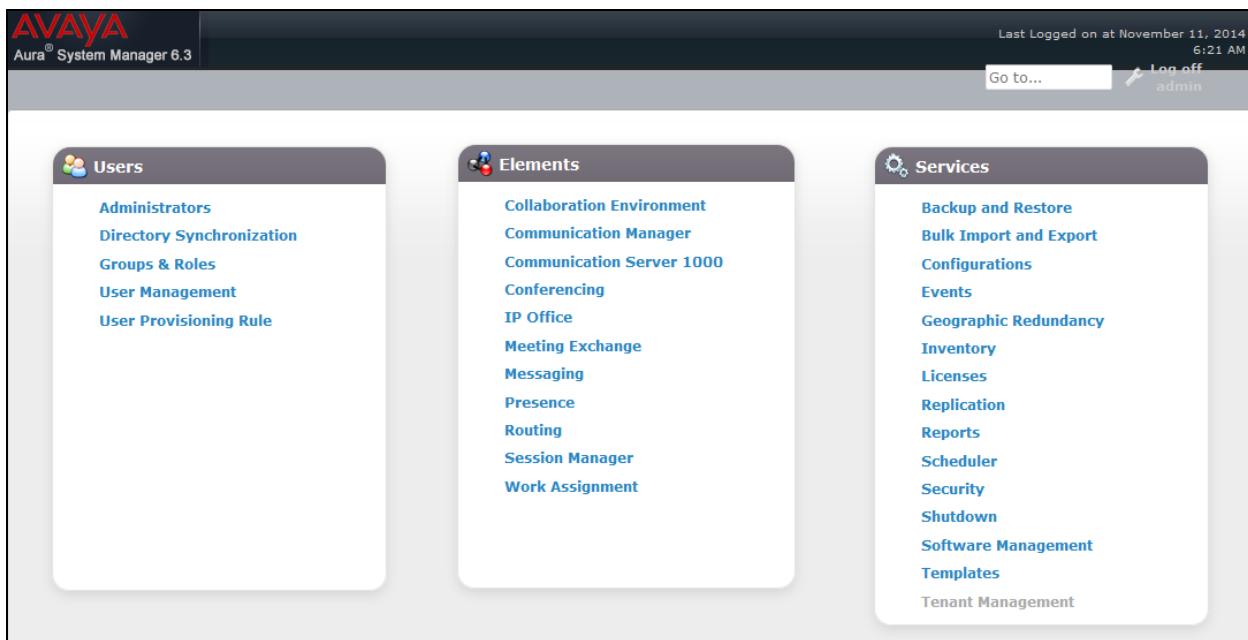

7. Verification Steps

To verify a successful configuration of Open Trade and CS 1000 a call is placed from CS 1000 to and from an Open Trade extension with the caller getting answered successfully and hearing clear and audible speech. The following steps can also be taken to ensure the link is up between Open Trade and Session Manager.

- Verify Open trade SIP Entity is up.

Log into System Manager as per **Section 5**. From the main menu select Session Manager as shown below.

Navigate to **System Status** → **SIP Entity Monitoring**. Select the **OpenTrade SIP Entity** (not shown), SIP Entity, Entity Link Connection Status is displayed and shows the status of OpenTrade SIP entity with Session Manager, make sure both **Conn Status** and **Link Status** is UP.

Session Manager Nam	SIP Entity Resolved IP	Port	Proto.	Deny	Conn. Status	Reason Code	Link Status
InteropSM	193.0.0.217	5060	UDP	FALSE	UP	200 OK	UP

- Verify the CS 1000 SIP Entity: repeat the steps above and verify that the link status of CS 1000 and Session Manager is UP as shown in the figure below.

Session Manager Nam	SIP Entity Resolved IP	Port	Proto.	Deny	Conn. Status	Reason Code	Link Status
InteropSM	10.10.97.170	5060	UDP	FALSE	UP	200 OK	UP

8. Conclusion

The interoperability of Open Trade from Etrali Trading Solutions with Avaya Communication Server 1000 Release 7.6 and Avaya Aura® Session Manager R6.3 was successful for this specific setup in order to place calls to and from Open Trade to CS 1000. All issues and observations are outlined in **Section 2.2**.
