

Avaya Solution & Interoperability Test Lab

Application Notes for CallCopy cc:Discover with Avaya Communication Manager and Avaya Application Enablement Services – Issue 1.0

Abstract

These Application Notes describe the configuration steps required for CallCopy cc:Discover to interoperate with Avaya Communication Manager and Avaya Application Enablement Services.

The cc:Discover is a software-only solution for voice call recording that offers various recording, playback and archiving features and options.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

CallCopy cc:Discover is a software-only solution for voice call recording that offers various recording, playback and archiving features and options. By combining media redirection from Avaya Communication Manager with single step conferencing, call recording can be achieved without the use of physical connections to the CallCopy server other than standard network connections.

CallCopy cc:Discover uses the Telephony Services API (TSAPI) of the Avaya Application Enablement Services (AES) to receive call related events. CallCopy cc:Discover's internal scheduling algorithm makes the determination on which calls should be recorded based on the events received via the TSAPI link and customer recording requirements.

The cc:Discover's Device Media and Call Control (DMCC) integration works by registering a number of softphone stations (one per channel) and sets the media and media control streams (RTP/RTCP) to go to unique UDP ports on the CallCopy cc:Discover server. When a call is to be recorded, the cc:Discover's TSAPI module performs a single step conference between the extension to be recorded and one of the softphone stations. The recording application then sends a message to the DMCC integration application to begin recording the voice stream coming to that soft phone extension. In this message, the recorder passes along the softphone extension to be recorded along with the location and filename of the recording. All RTP traffic on that softphone's RTP port is captured and written to the file location in CallCopy's proprietary .cca format.

2. Equipment and Software Validated

The following equipment and software were used for the sample configuration:

Equipment		Software/Firmware
Avaya S8700 Servers		Avaya Communication Manager 4.0.1 (R014x.00.1.731.2)
Avaya G650 Media Gateway		
	TN2312BP IP Server Interface	HW11 FW030
	TN799DP CLAN Interface	HW01 FW017
	TN2302AP IP Media Processor	HW20 FW108
Avaya S8300 Server with Avaya G700 Media Gateway		Avaya Communication Manager 4.0.1 (R014x.00.1.731.2)
Avaya Application Enablement Services		4.0 w/ Bundled Offer Build 47.3
Avaya 4600 Series IP Telephones		
	4620 (H.323)	2.8
	4625 (H.323)	2.8
Avaya 9600 Series IP Telephones		
	9630 (H.323)	1.5
	9650 (H.323)	1.5
Avaya 6400D Series Digital Telephones		N/A
Avaya C363T-PWR Converged Stackable Switch		4.5.14
Extreme Networks Summit 48		4.1.21
CallCopy cc:Discover		3.6.0.215

3. Configure Avaya Communication Manager

This section provides the procedures for configuring hunt/skill group, vectors, Vector Directory Numbers (VDN), agents, agent login/logout feature access codes, recording ports and recording (DMCC) stations, recorded stations, IP codec, IP network regions, and Computer Telephony Interface (CTI) link on Avaya Communication Manager to integrate with cc:Discover. All the configuration changes in Avaya Communication Manager are performed through the System Access Terminal (SAT) interface. The highlights in the following screens indicate the values used during the compliance test. For the compliance testing, the following contact center devices were used.

Device Type	Device Number/Extension
VDN	50000
Vector	11
Skill group	11
Logical agent IDs	50021, 50022, 50023, 50024, 20025
Recorded stations (IP Telephones)	IP Telephones: 22001, 22002, 22003 DCP Telephone: 22007 IP Agents: 22008, 22009
Recording stations (DMCC stations)	21001 - 21023

3.1. Hunt/Skill Groups, Agent Logins, and Call Vectoring

Enter the **display system-parameters customer-options** command. On **Page 6**, verify that the ACD and Vectoring (Basic) fields are set to **y**. If not, contact an authorized Avaya account representative to obtain these licenses.

```
display system-parameters customer-options                               Page 6 of 11

```

Enter the **add hunt-group n** command, where **n** is an unused hunt group number. On **Page 1** of the hunt-group form, assign a descriptive Group Name and Group Extension valid in the provisioned dial plan. Set the ACD, Queue, and Vector fields to **y**. When ACD is enabled, hunt group members serve as ACD agents and must log in to receive ACD split/skill calls. When Queue is enabled, calls to the hunt group will be served by a queue. When Vector is enabled, the hunt group will be vector controlled.

```

Press 'Esc f 6' for Vector Editing

Enter the **add vdn r** command, where **r** is an extension valid in the provisioned dial plan. Specify a descriptive Name for the VDN and specify the vector configured in the previous step as the Vector Number. In the example below, incoming calls to extension 50000 will be routed to VDN 50000, which in turn will invoke the actions specified in vector 11.

```
add vdn 50000                                     Page 1 of 2

                                VECTOR DIRECTORY NUMBER

                                Extension: 50000
                                Name: VDN-50000
                                Vector Number: 11

                                Meet-me Conferencing? n
                                Allow VDN Override? n

```

3.2. Recording Ports

The recording ports in this configuration are AES Device, Media, and Call Control (DMCC) stations that essentially appear as IP Softphones to Avaya Communication Manager. Each DMCC station requires an IP_API_A license.

Enter the **display system-parameters customer-options** command and verify that there are sufficient **IP_API_A** licenses. If not, contact an authorized Avaya account representative to obtain these licenses.

display system-parameters customer-options			Page 10 of 11
MAXIMUM IP REGISTRATIONS BY PRODUCT ID			
Product ID	Rel. Limit	Used	
IP_API_A	: 200	0	
IP_API_B	: 0	0	
IP_API_C	: 0	0	
IP_Agent	: 50	0	
IP_IR_A	: 0	0	
IP_Phone	: 12000	3

IP_Soft	: 2	0	
IP_eCons	: 0	0	
	: 0	0	
	: 0	0	
(NOTE: You must logoff & login to effect the permission changes.)			

Enter the **add station s** command, where **s** is an extension valid in the provisioned dial plan. On **Page 1** of the STATION form, set the Type field to an IP telephone set type, set the Port field to **ip**, enter a descriptive Name, specify the Security Code, and set the IP SoftPhone field to **y**.

Repeat this step as necessary, with the same Security Code, to configure additional DMCC stations.

add station 21001		Page 1 of 5

3.3. Recorded Stations

The stations that were recorded during the compliance testing include an Avaya Digital Telephone, Avaya IP Telephones (Avaya 4600 and 9600 Series), and an Avaya IP Agent. The extensions used were in the ranges 22001-22009.

3.4. Audio Codec Configuration

Enter the **change ip-codec-set t** command, where **t** is a number between 1 and 7, inclusive.

Note: The codec has to match between Avaya Communication Manager and CallCopy cc:Discover (recording codec).

```
change ip-codec-set 1                                     Page 1 of 2

                                IP Codec Set

Codec Set: 1

2:
3:
4:

Media Encryption
1: none
2:
```

3.5. IP Network Regions

During compliance testing, a C-LAN board dedicated for H.323 endpoint registration was assigned to IP network region 1. Set the Codec Set field to **1**. The Avaya IP Telephones and Avaya IP Agent, as well as Avaya AES DMCC stations used by the cc:Discover, registered with the C-LAN board (CLAN) and were thus also assigned to IP network region 1. One consequence of assigning the aforementioned Avaya IP Telephones, Avaya IP Agent, Avaya AES DMCC stations, and MedPro boards to a common IP network region is that the RTP traffic between them is governed by the same codec set. The second C-LAN board (CLAN-AES), which was dedicated for the Avaya AES was assigned to the IP network region 2. The following screen shows only IP network region 1.

change ip-network-region 1		Page 1 of 19
IP NETWORK REGION

3.6. Configure TSAPI CTI Link

Enter the **add cti-link m** command, where **m** is a number between 1 and 64, inclusive. Enter a valid Extension under the provisioned dial plan. Set the Type field to **ADJ-IP** and assign a descriptive Name to the CTI link. Default values may be used in the remaining fields.

add cti-link 4	Page 1 of 2
CTI LINK	
CTI Link: 4	
Extension: 79001	
Type: ADJ-IP	
Name: TSAPI	COR: 1

Enter the **change node-names ip** command. In the compliance-tested configuration, the CLAN IP address was utilized for registering H.323 endpoints (Avaya IP Telephones, Avaya IP Agents, and Avaya AES DMCC stations). The CLAN-AES IP address was used for connectivity to the Avaya AES server.

change node-names ip	Page 1 of 2
IP NODE NAMES	
Name	IP Address
CLAN	192.45.80.87
CLAN-AES	192.45.80.89
MEDPRO	192.45.80.88
S8300G700	192.45.87.11
VAL	192.45.80.85
default	0.0.0.0

Enter the **change ip-services** command. On **Page 1**, configure the Service Type field to **AESVCS** and the Enabled field to **y**. The Local Node field should be pointed to the **CLAN-AES** board that was configured previously in the node-name ip form. During the compliance test, the default port was utilized for the Local Port field.

change ip-services	Page 1 of 4				
IP SERVICES					
Service Type	Enabled	Local Node	Local Port	Remote Node	Remote Port
AESVCS	y	CLAN-AES	8765		

On **Page 4**, enter the hostname of the AES server for the AE Services Server field. The server name may be obtained by logging in to the AES server using ssh, and run **uname -a**. Enter an alphanumeric password for the Password field. Set the Enabled field to **y**. The same password will be configured on the AES server in **Section 4.1**.

change ip-services				Page 4 of 4
AE Services Administration				
Server ID	AE Services Server	Password	Enabled	Status
1:	server1	xxxxxxxxxxxxxxxxxx	y	idle

4. Configure Avaya Application Enablement Services

Avaya AES enables Computer Telephony Interface (CTI) applications to control and monitor telephony resources on Avaya Communication Manager. Avaya AES receives requests from CTI applications, and forwards them to Avaya Communication Manager. Conversely, Avaya AES receives responses and events from Avaya Communication Manager and forwards them to the appropriate CTI applications.

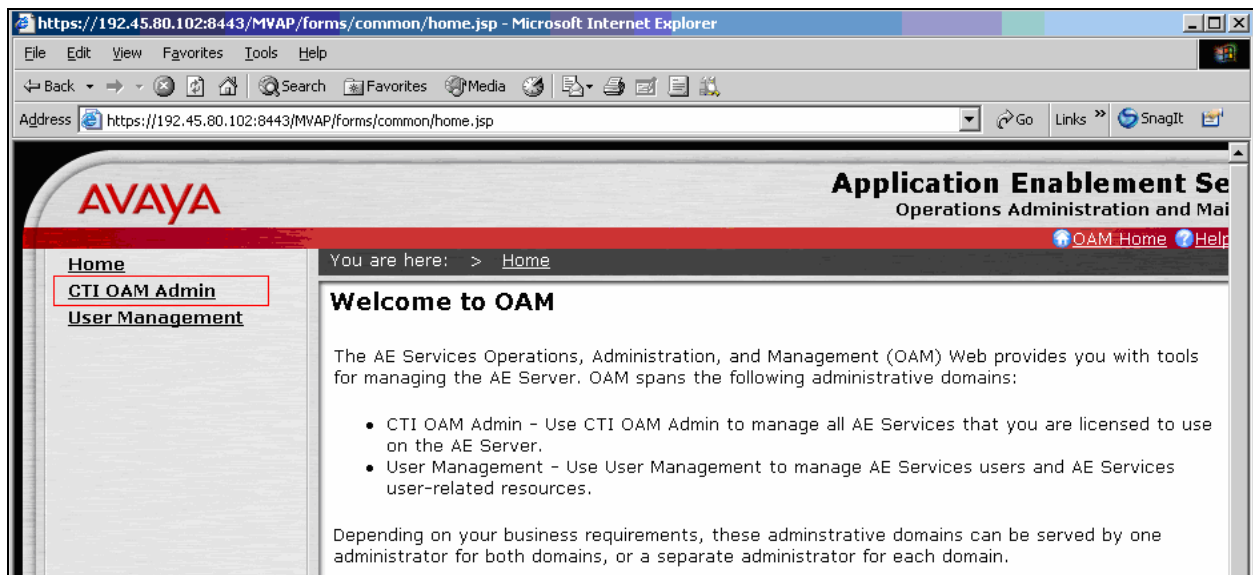

This section assumes that installation and basic administration of the Avaya Application Enablement Services server has been performed. The steps in this section describe the configuration of a Switch Connection, creating a CTI link for TSAPI, and a CTI user.

4.1. Configure Switch Connection

Launch a web browser, enter <https://<IP address of AES server>:8443/MVAP> in the URL, and log in with the appropriate credentials for accessing the AES CTI OAM pages.

The Welcome to OAM screen is displayed next. Select **CTI OAM Admin** from the left pane.

Verify that AES is licensed for the TSAPI service, as shown in the bottom of the screen below.

AVAYA Application Enablement Service
Operations Administration and Maintenance

You are here: > CTI OAM Home

Welcome to CTI OAM Screens

[craft] logged in on Wed June 20 12:26:19 E.S.T. 2007

IMPORTANT: AE Services must be restarted for administrative changes to fully take effect. Changes to the Security Database do not require a restart.

Service	Controller Status
ASAI Link Manager	Running
DMCC Service	Running
CVLAN Service	Running
DLG Service	Running
Transport Layer Service	Running
TSAPI Service	Running

For status on actual services, please use [Status and Control](#).

License Information

You are licensed to run Application Enablement (CTI) version 4.0.

You are licensed for the following services

- DLG
- CVLAN
- TSAPI

Click on **Administration** → **Switch Connections** in the left pane to invoke the Switch Connections page. A Switch Connection defines a connection between the AES server and Avaya Communication Manager. Enter a descriptive name for the switch connection and click on **Add Connection**.

AVAYA Application Enablement Services
Operations Administration and Maintenance

You are here: > Administration > Switch Connections

Switch Connections

[S8700] **Add Connection**

Connection Name	Number of Active Connections	Connection Type
<div>Edit Connection Edit CLAN IPs Edit H.323 Gatekeeper Delete Connection</div>		

The next window that appears prompts for the Switch Password. Enter the same password that was administered on Avaya Communication Manager in **Section 3.6**. Default values may be used in the remaining fields. Click on **Apply**.

AVAYA Application Enablement Services
Operations Administration and Maintenance

You are here: > Administration > Switch Connections

Set Password - S8700

Please note the following:
 * A password is not required for a H323 Gatekeeper Connection.
 * Changing the password affects only new connections, not open connections.

You are here: > Administration > Switch Connections

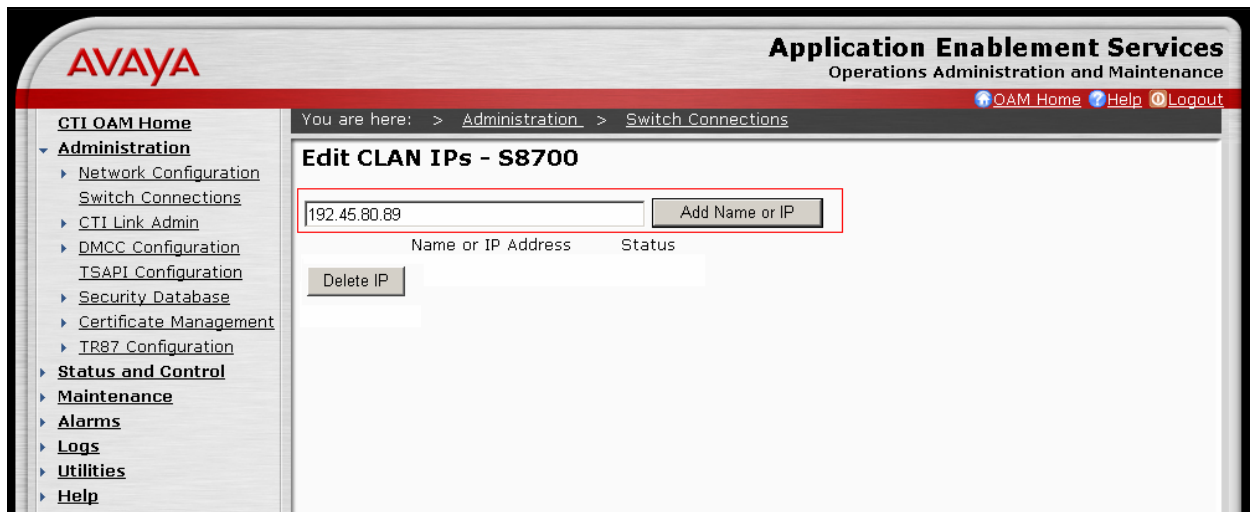

Switch Connections

Add Connection

Connection Name	Number of Active Connections	Connection Type
<input type="radio"/> S8300G700	1	CTI/Call Information
<input checked="" type="radio"/> S8700	1	CTI/Call Information

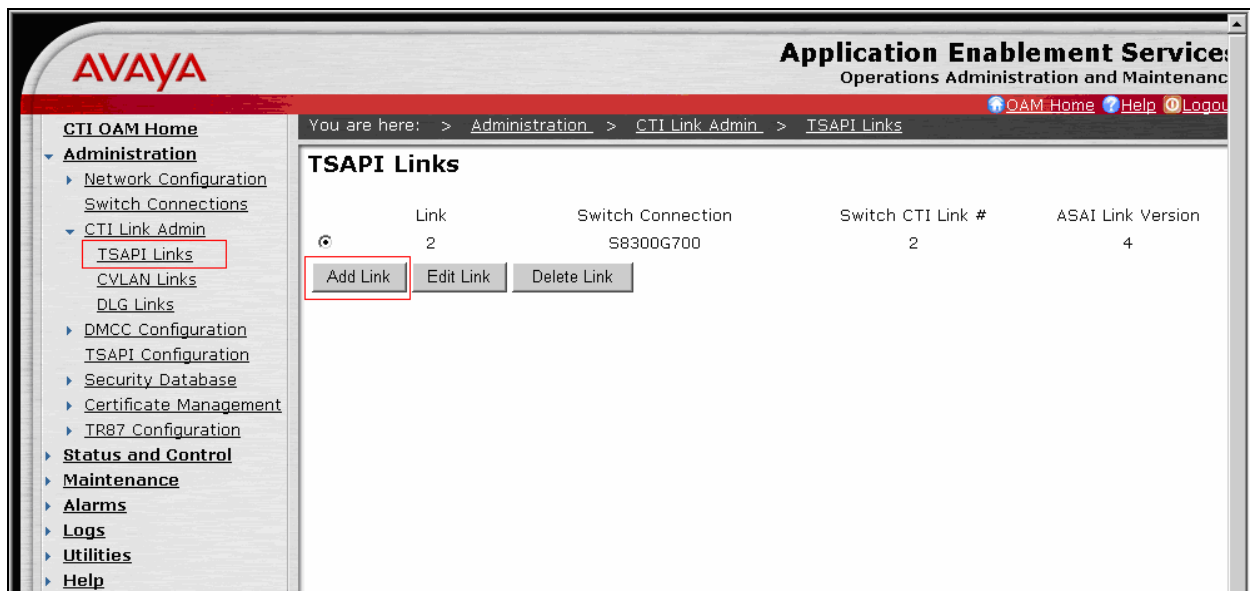

Edit Connection Edit CLAN IPs Edit H.323 Gatekeeper Delete Connection

Enter the IP address of the CLAN used for Avaya AES connectivity from **Section 3.6**, and click on **Add Name or IP**.

4.2. Configure TSAPI CTI Link

Navigate to **Administration → CTI Link Admin → TSAPI Links** to configure the TSAPI CTI link. Click the **Add Link** button to start configuring the TSAPI link.

Select the switch connection using the drop-down menu. Select the switch connection configured in **Section 4.1**. Select the Switch CTI Link Number using the drop-down menu. The CTI link number should match with the number configured in the cti-link form in **Section 3.6**. Select **Apply Changes**.

AVAYA Application Enablement Services
Operations Administration and Maintenance

You are here: > Administration > CTI Link Admin > TSAPI Links

Add / Edit TSAPI Links

Link: 1

Switch Connection: S8700

Switch CTI Link Number: 4

The following screen shows the TSAPI CTI link configuration.

AVAYA Application Enablement Services
Operations Administration and Maintenance

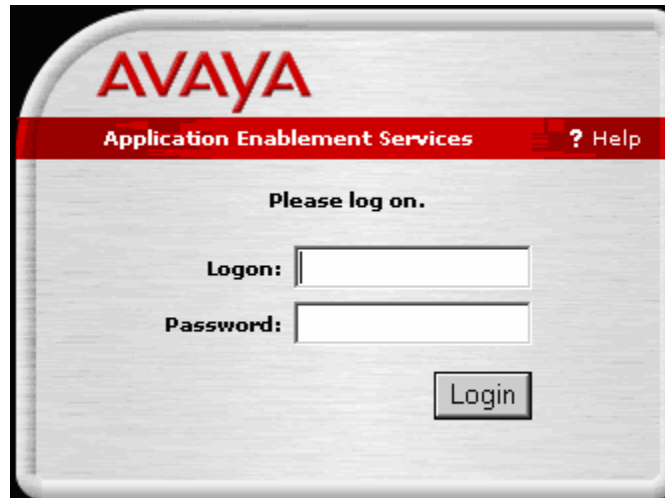

You are here: > Administration > CTI Link Admin > TSAPI Links

TSAPI Links

	Link	Switch Connection	Switch CTI Link #	ASAI Link Version
<input checked="" type="radio"/>	1	S8700	4	4
<input type="radio"/>	2	S8300G700	2	4

4.3. Configure CTI User

The steps in this section describe the configuration of a CTI user. Launch a web browser, enter <https://<IP address of AES server>:8443/MVAP> in the URL, and log in with the appropriate credentials for accessing the OAM Home page.

The Welcome to OAM screen is displayed next. Select **User Management** from the left pane.

From the Welcome to the User Management Home page, navigate to the **User Management** → **Add User** page to add a CTI user.

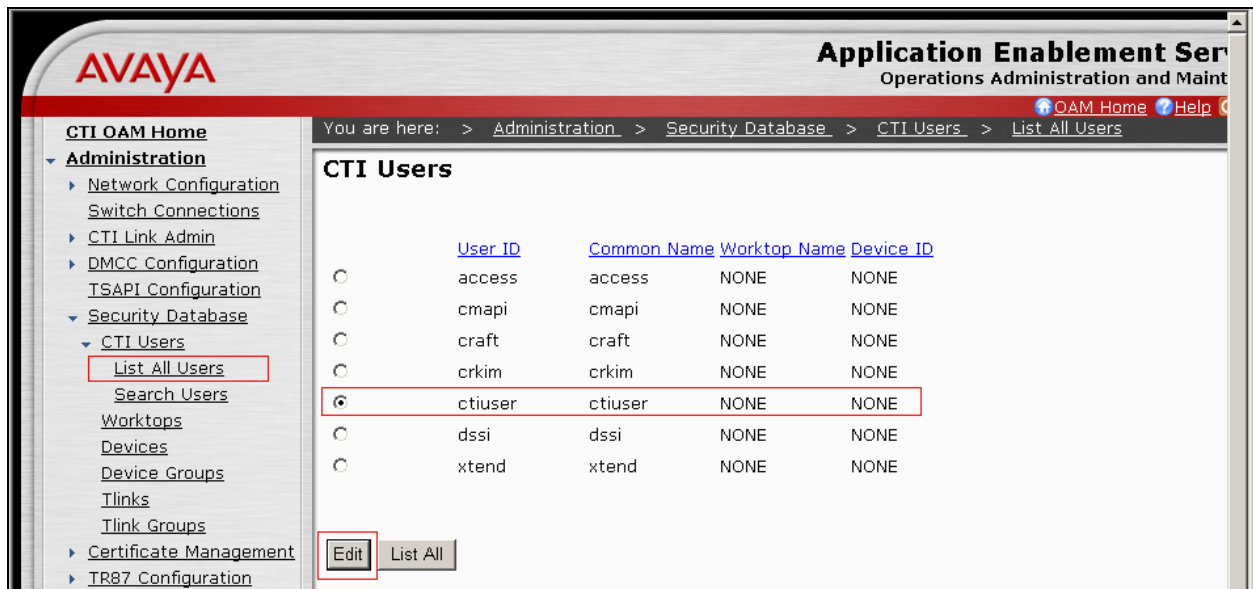

On the Add User page, provide the following information:

- User Id
- Common Name
- Surname
- User Password
- Confirm Password

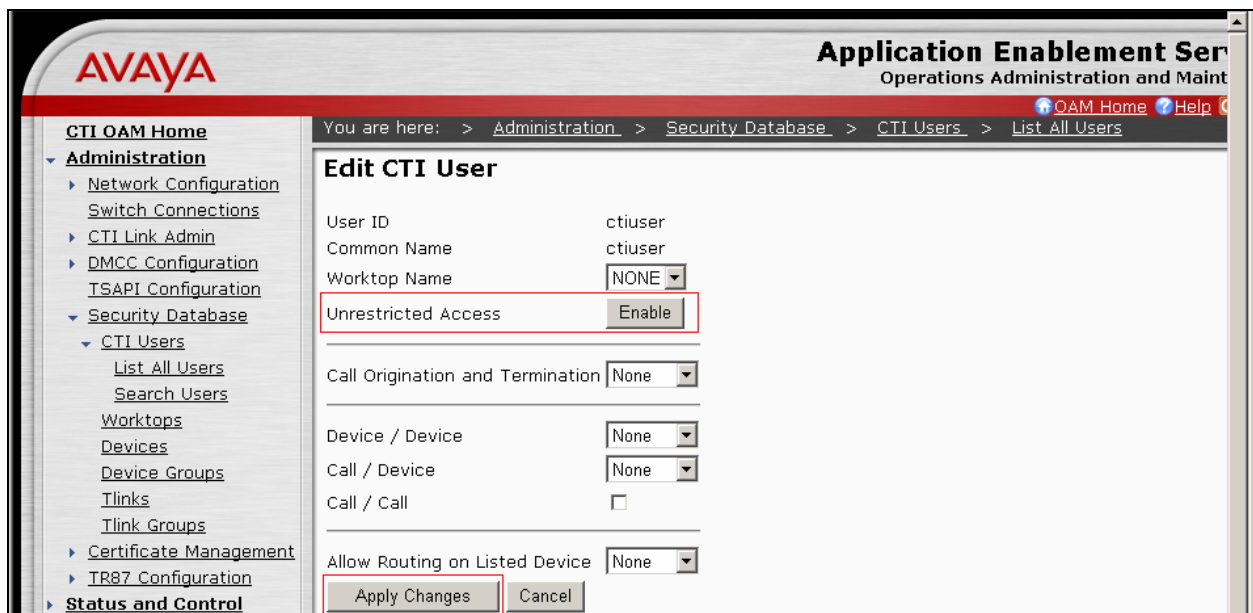

Select **Yes** using the drop-down menu on the CT User field. This enables the user as a CTI user. Click the **Apply** button (not shown here) at the bottom of the screen to complete the process. Default values may be used in the remaining fields.

The screenshot shows the 'Add User' page in the Avaya AES interface. The breadcrumb trail is 'You are here: > User Management > Add User'. The left sidebar is the same as the previous screenshot. The main content area is titled 'Add User' and includes a note: 'Fields marked with * can not be empty.' The form contains the following fields: '* User Id' (text input, value: 'ctiuser'), '* Common Name' (text input, value: 'ctiuser'), '* Surname' (text input, value: 'ctiuser'), '* User Password' (password input, value: '*****'), '* Confirm Password' (password input, value: '*****'), 'Admin Note' (text input), 'Avaya Role' (dropdown menu, value: 'None'), 'Business Category' (text input), 'Car License' (text input), 'CM Home' (text input), 'Ciss Home' (text input), 'CT User' (dropdown menu, value: 'Yes', highlighted with a red box), and 'Department Number' (text input).

Once the user is created, select **OAM Home** in upper right and navigate to the **Administration** → **Security Database** → **CTI Users** → **List All Users** page. Select the User ID created previously, and click the **Edit** button to set the permission of the user.

Provide the user with unrestricted access privileges by clicking the **Enable** button on the Unrestricted Access field. Click the **Apply Changes** button.

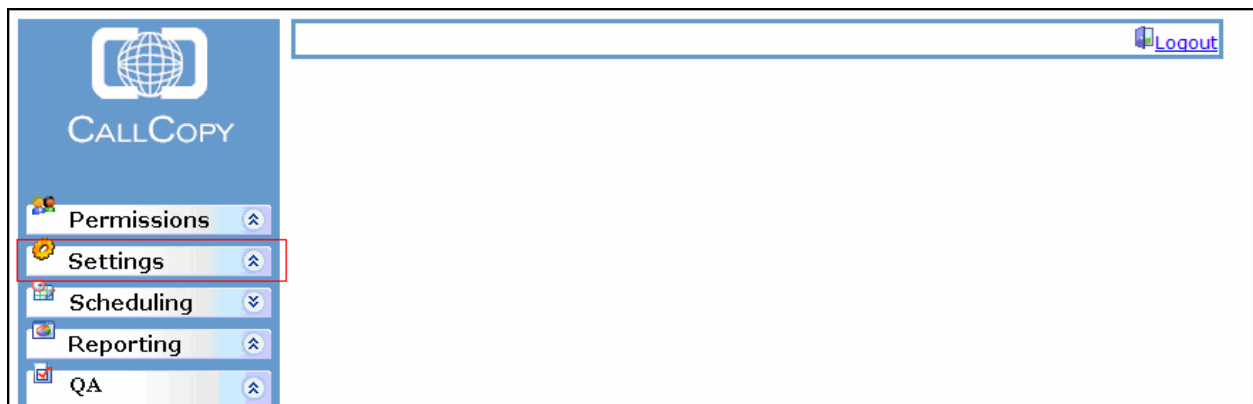

5. Configure CallCopy cc:Discover

CallCopy installs, configures, and customizes the cc:Discover application for their end customers. This section only describes the interface section of the cc:Discover configuration.

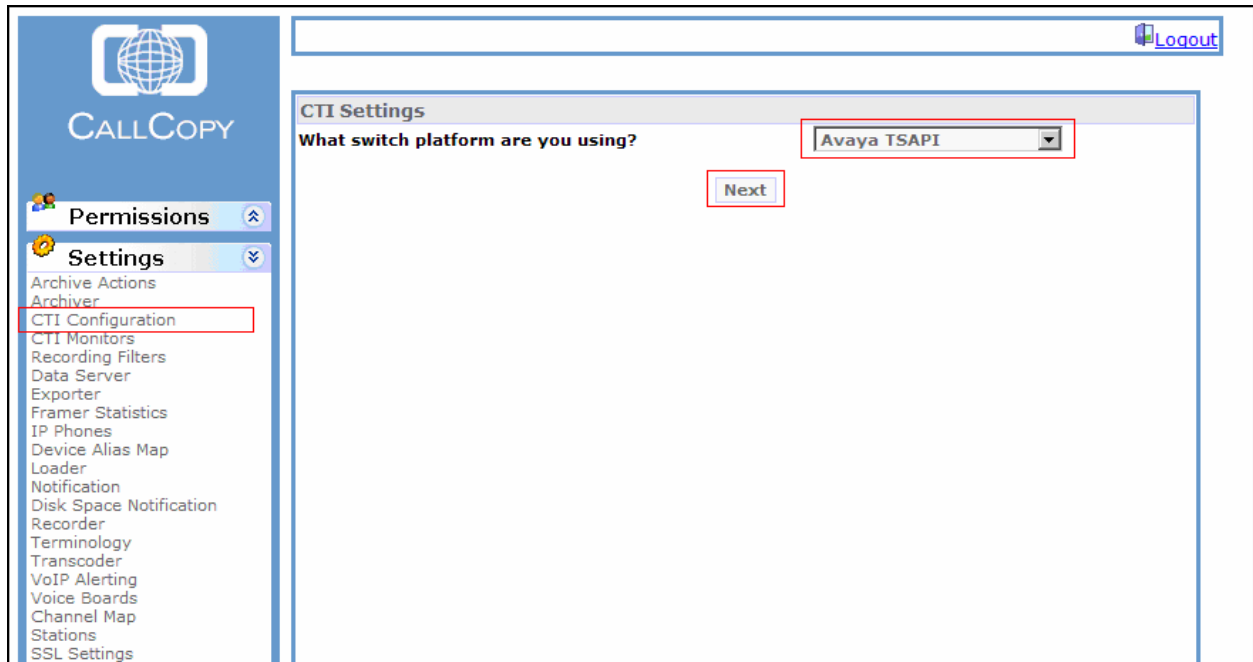

Launch a web browser, enter <http://<IP address of CallCopy server>> in the URL, and log in with the appropriate credentials for accessing the CallCopy cc:Discover main pages.

The image shows the CallCopy User Login page. At the top, there is a banner with a globe icon and the text "CALLCOPY". Below the banner, the heading "USER LOGIN" is displayed. Underneath, there is a form with two input fields: "Username:" and "Password:". A "Login" button is located below the password field. The entire form is enclosed in a red rectangular border.

Select the **Settings** → **CTI Configuration** link from the left pane to configure the interface.

The following shows the CTI Settings screen. Using the drop-down menu, select **Avaya TSAPI**. Click the **Next** button.

Select **Voice Boards** link under the Settings section. To add a new board, click **Add Board**.

Enter a descriptive Name for the Hardware Type field, and click **Next**.

The highlighted fields on the following screen were configured for the compliance test.

- AES/DMCC Host - IP address of the AES/DMCC host.
- DMCC User - DMCC username used for authenticating with Avaya AES during the DMCC session startup.
- DMCC Password - DMCC password used for authenticating with Avaya AES during the DMCC session startup.
- Avaya Call Manager Host - CLAN (or procr) IP address of Avaya Communication Manager.
- DMCC Station Endpoint Host - IP address that will be receiving the RTP/RTCP traffic from the Call Manager. This will be the server running the Avaya DMCC Integration (usually the CallCopy Server). You must enter the actual IP address of the server – do not use localhost or 127.0.0.1.

Default values may be used for all other fields.

21	Anything	21021	1234	<New Channel>

6. Interoperability Compliance Testing

The interoperability compliance test included feature, serviceability, and performance testing. The feature testing evaluated the ability of CallCopy cc:Discover to monitor and record calls placed to and from stations and agents. The serviceability testing introduced failure scenarios to see if CallCopy cc:Discover could resume recording after failure recovery. The performance testing stressed CallCopy cc:Discover by continuously placing calls over extended periods of time.

6.1. General Test Approach

All test cases were performed manually. The general approach was to place various types of calls to and from stations, and agents. These trunk calls were then monitored and recorded using CallCopy cc:Discover. The recordings were verified for each call. For feature testing, the types of calls included inbound and outbound trunk calls, transferred calls, bridged calls, and conferenced calls. Performance tests verified that CallCopy cc:Discover could record calls during a sustained, high volume of calls. For serviceability testing, failures such as cable pulls, busyouts/releases of the trunk group, and resets were applied.

6.2. Test Results

All test cases were executed and passed.

7. Verification Steps

This section provides the tests that can be performed to verify proper configuration of Avaya Communication Manager and Avaya AES.

7.1. Verify Avaya Communication Manager

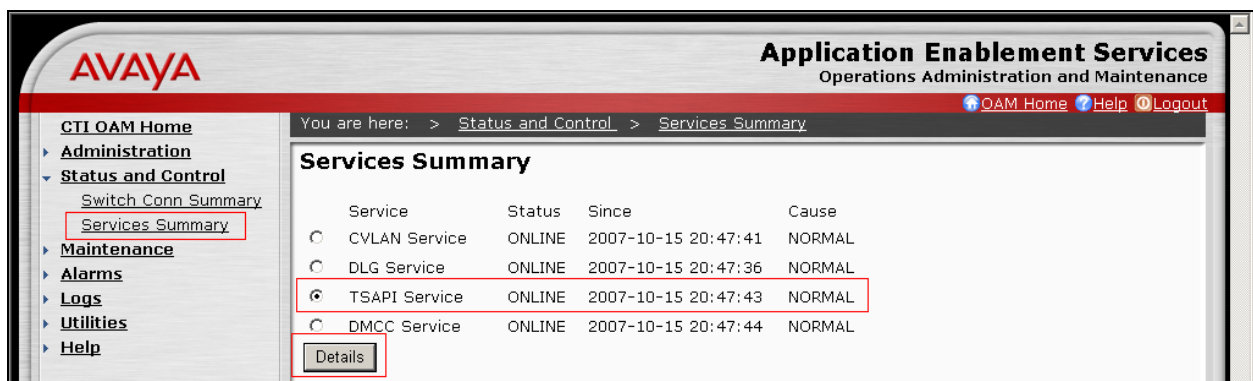

Verify the status of the administered CTI link by using the **status aesvcs cti-link** command. Verify the Service State is “**established**” for the CTI link number administered in **Section 3.6**, as shown below.

```
status aesvcs cti-link
```

AE SERVICES CTI LINK STATUS						
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd
1		no		down	0	0
2		no	server1	restarting	15	15
3		no		down	0	0
4	4	no	server1	established	15	15
5		no		down	0	0
6		no		down	0	0

7.2. Verify Avaya Application Enablement Services

From the AES CTI OAM Admin web pages, verify the status of the TSAPI link by selecting **Status and Control** → **Services Summary** from the left pane. Select the radio button for TSAPI Service, and click **Details**.

The **TSAPI Link Details** screen is displayed. Verify that the **Conn Status** is “Talking”, as shown below.

AVAYA Application Enablement Services
Operations Administration and Maintenance

You are here: > Status and Control > Services Summary

TSAPI Link Details

Link	Switch Conn Name	Switch CTI Link Number	Conn Status	Since	Service State	Switch Version	Number of Associations	ASAI Message Rate
1	S8700	4	Talking	2007-10-15 20:47:41.0	Online	14	0	15
2	S8300G700	2	Talking	2007-10-15 20:47:41.0	Online	14	0	15

8. Support

Technical support on the cc:Discover can be obtained through the following:

- **Phone:** (888) 922-5526 (Option 2)
- **Web:** <http://support.callcopy.com> or <http://www.callcopy.com/support>

9. Conclusion

These Application Notes describe the configuration steps required for CallCopy cc:Discover (Version 3.6.0.215) to interoperate with Avaya Communication Manager 4.0.1 (R014x.00.1.731.2) and Avaya Application Enablement Services 4.0 (Bundled Offer Build 47.3). All feature and serviceability test cases were completed.
