

Avaya Solution & Interoperability Test Lab

Application Notes for Grandsys Technology & Service LOG8000 with Avaya Communication Manager and Avaya Application Enablement Services - Issue 1.0

Abstract

These Application Notes describe the procedures for configuring Grandsys Technology & Service LOG8000 to monitor and record calls placed to and from Avaya IP telephones and agents on Avaya Communication Manager.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe a compliance-tested configuration comprised of an Avaya Communication Manager, an Avaya Application Enablement Services (AES) and Grandsys Technology & Service LOG8000.

Grandsys LOG8000 is a recording solution made for the customers of the call center market. Grandsys LOG8000 communicates with Avaya AES using the Telephony Services Application Programming Interface (TSAPI) and uses E1 FXS lines as recording channels. When a call starts on an extension to be recorded, the recording channel will be added to the call using the TSAPI Single Step Conference feature. Grandsys LOG8000 will then record the call and save the recording to the database. Detailed call information obtained using TSAPI are also stored for each call along with the recording.

Figure 1 illustrates a sample configuration consisting of an Avaya S8500 Server, an Avaya G650 Media Gateway, an Avaya AES Server, Avaya IP Telephones and a Windows 2003 Server running Grandsys LOG8000. The Grandsys LOG8000 Server connects to Avaya Communication Manager using E1 FXS lines for voice recording. The Grandsys LOG8000 Server also monitors the agent extensions using the TSAPI Service to retrieve call related information. The TSAPI Service is provided by the Avaya AES Server.

Figure 1: Test Configuration

2. Equipment and Software Validated

The following equipment and software/firmware were used for the sample configuration provided:

Equipment	Version
Avaya S8500 Server	Avaya Communication Manager 5.1 (Service Pack 1 01.0.414.3-15962)
Avaya G650 Media Gateway - TN2312BP IP Server Interface - TN799DP C-LAN Interface - TN2602AP IP Media Processor - TN2214CP Digital Line - TN2464BP DS1 Interface	- HW07, FW044 HW01, FW026 HW02, FW040 HW08, FW015 HW05, FW022
Avaya Application Enablement Services	4.1 with Patch 1
Avaya 4621SW IP Telephone	2.8.8.7 (H.323)
Avaya 9600 Series IP Telephones - 9630 - 9640	1.55 (H.323) 1.55 (H.323)
Avaya 1608 IP Telephone	1.0.2 (H.323)
Avaya C364T-PWR Converged Stackable Switch	4.5.18
Grandsys LOG8000	2.1.5

3. Configure Avaya Communication Manager

This section provides the procedures for configuring Computer Telephony Integration (CTI) links and FXS stations on Avaya Communication Manager. All the configuration changes in Avaya Communication Manager are performed through the System Access Terminal (SAT) interface. The highlights in the following screens indicate the values used during the compliance test.

3.1. Configure AES and CTI Links

The Avaya AES server forwards CTI requests, responses, and events between Grandsys LOG8000 and Avaya Communication Manager. The Avaya AES server communicates with Avaya Communication Manager over an AES link. Within the AES link, CTI links may be configured to provide CTI services to CTI applications such as Grandsys LOG8000. The following steps demonstrate the configuration of the Avaya Communication Manager side of the AES and CTI links. See **Section 4** for the details of configuring the AES side of the AES and CTI links.

Step	Description												
1.	Enter the display system-parameters customer-options command. On Page 3, verify that Computer Telephony Adjunct Links is set to y . If not, contact an authorized Avaya account representative to obtain the license.												
	<pre>display system-parameters customer-options</pre> <p style="text-align: right;">Page 3 of 11</p> <p style="text-align: center;">OPTIONAL FEATURES</p> <pre> Abbreviated Dialing Enhanced List? n Audible Message Waiting? n Access Security Gateway (ASG)? n Authorization Codes? y Analog Trunk Incoming Call ID? n Backup Cluster Automatic Takeover? n A/D Grp/Sys List Dialing Start at 01? n CAS Branch? n Answer Supervision by Call Classifier? n CAS Main? n ARS? y Change COR by FAC? n ARS/AAR Partitioning? y Computer Telephony Adjunct Links? y ARS/AAR Dialing without FAC? n Cvg Of Calls Redirected Off-net? n ASAI Link Core Capabilities? n DCS (Basic)? n ASAI Link Plus Capabilities? n DCS Call Coverage? n Async. Transfer Mode (ATM) Trunking? n ATM WAN Spare Processor? n Digital Loss Plan Modification? n ATMS? n DS1 MSP? n Attendant Vectoring? n DS1 Echo Cancellation? n </pre>												
2.	Enter the add cti-link m command, where m is a number between 1 and 64, inclusive. Enter a valid Extension under the provisioned dial plan in Avaya Communication Manager, set the Type field to ADJ-IP , and assign a descriptive Name to the CTI link.												
	<pre>add cti-link 1</pre> <p style="text-align: right;">Page 1 of 2</p> <p style="text-align: center;">CTI LINK</p> <pre> CTI Link: 1 Extension: 19951 Type: ADJ-IP Name: TSAPI Svcs COR: 1 </pre>												
3.	Enter the change node-names ip command. In the compliance-tested configuration, the CLAN-01A02 IP address was utilized for registering H.323 endpoints (Avaya IP Telephones) and for connectivity to Avaya AES.												
	<pre>change node-names ip</pre> <p style="text-align: right;">Page 1 of 2</p> <p style="text-align: center;">IP NODE NAMES</p> <table border="1"> <thead> <tr> <th>Name</th><th>IP Address</th></tr> </thead> <tbody> <tr> <td>CLAN-01A02</td><td>10.1.10.21</td></tr> <tr> <td>MEDPRO-01A13</td><td>10.1.10.31</td></tr> <tr> <td>VAL-01A04</td><td>10.1.10.41</td></tr> <tr> <td>default</td><td>0.0.0.0</td></tr> <tr> <td>procr</td><td>10.1.10.10</td></tr> </tbody> </table>	Name	IP Address	CLAN-01A02	10.1.10.21	MEDPRO-01A13	10.1.10.31	VAL-01A04	10.1.10.41	default	0.0.0.0	procr	10.1.10.10

4. Configure Avaya Application Enablement Services

This section provides the procedures for configuring Avaya Application Enablement Services. The procedures fall into the following areas:

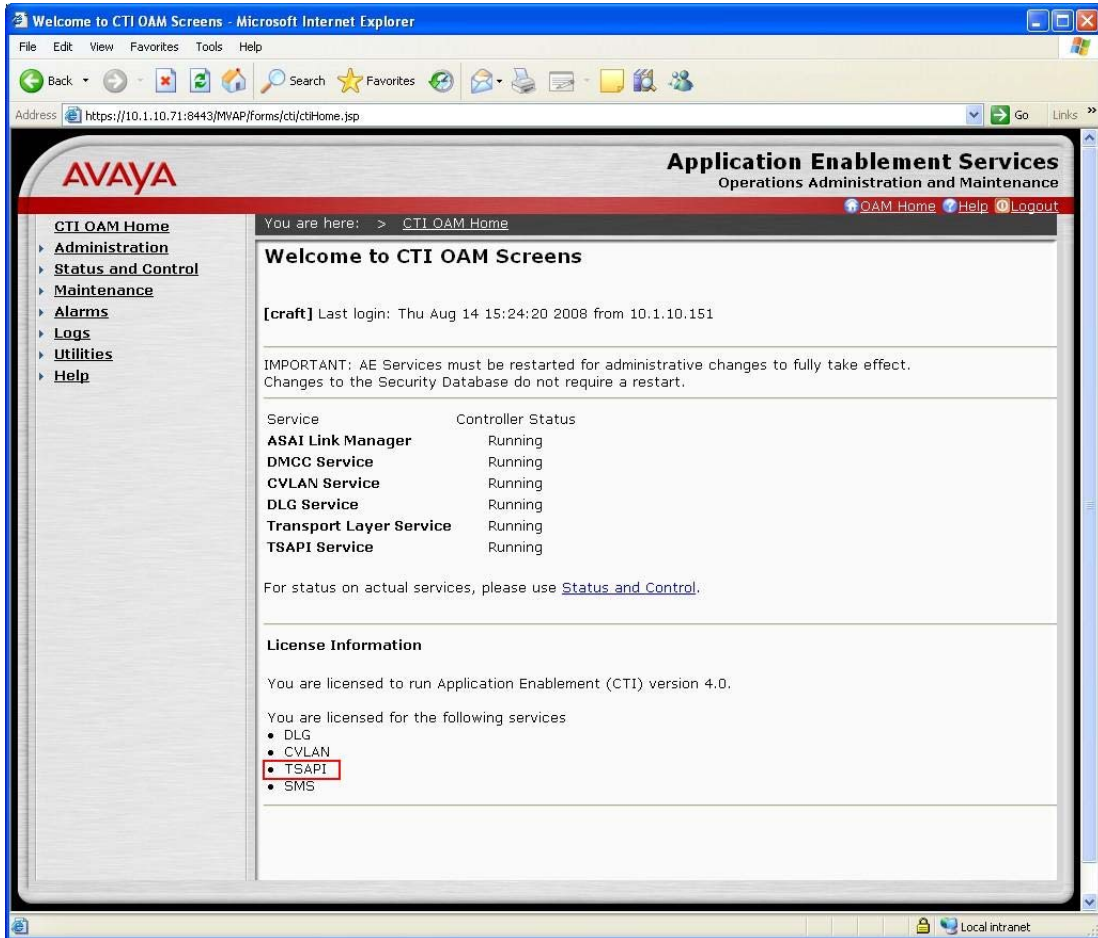

- Administer CTI User
- Verify Avaya Application Enablement Services License
- Administer Switch Connection
- Administer TSAPI link
- Administer CTI user permission
- Administer Ports

4.1. Administer CTI User

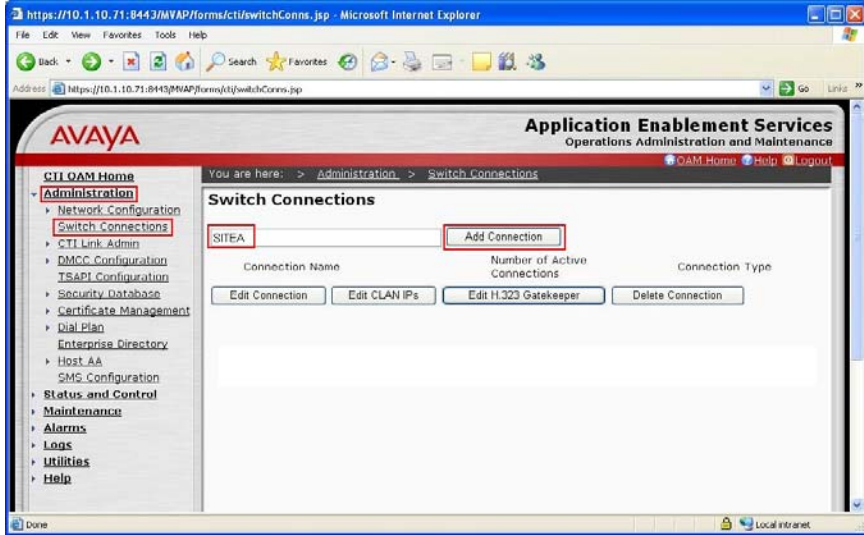

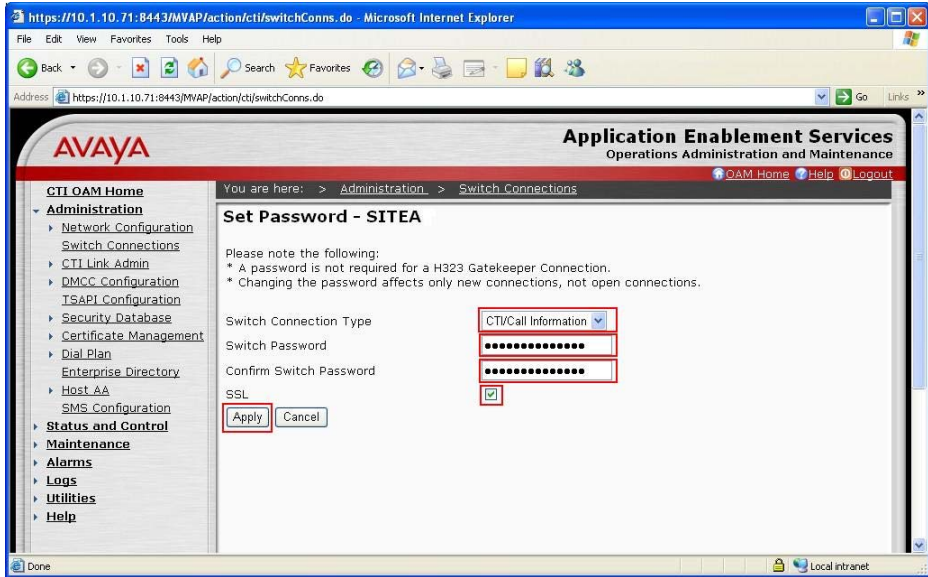

Step	Description
1.	<p>Launch a web browser and enter https://<IP address of AES server>/MVAP/ to access the AES OAM web based interface. Log in to AES OAM using an administrative login and password (not shown), and the Welcome To OAM screen will be displayed.</p> 

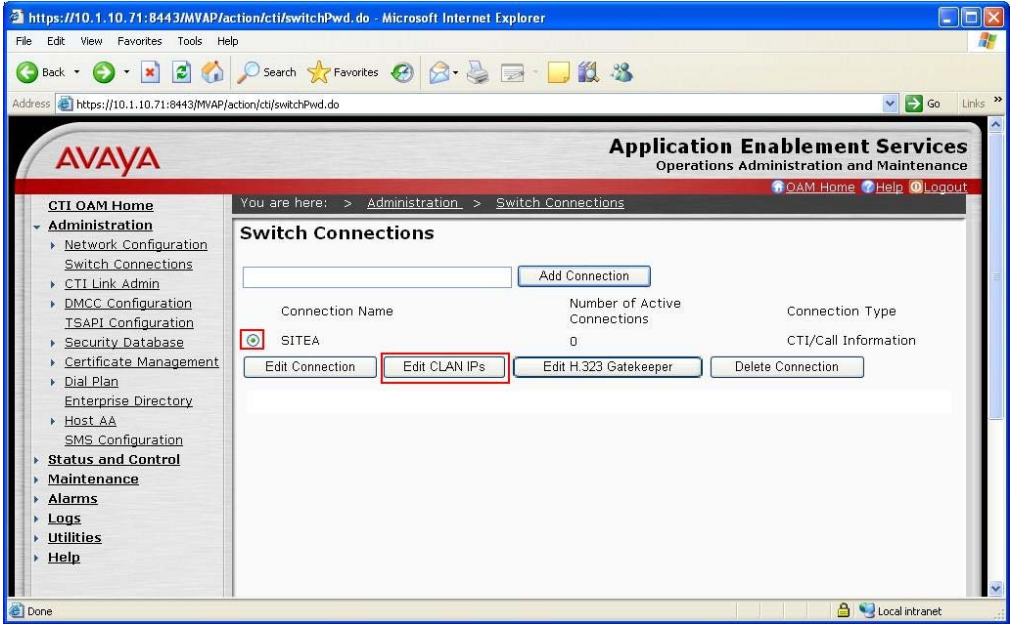

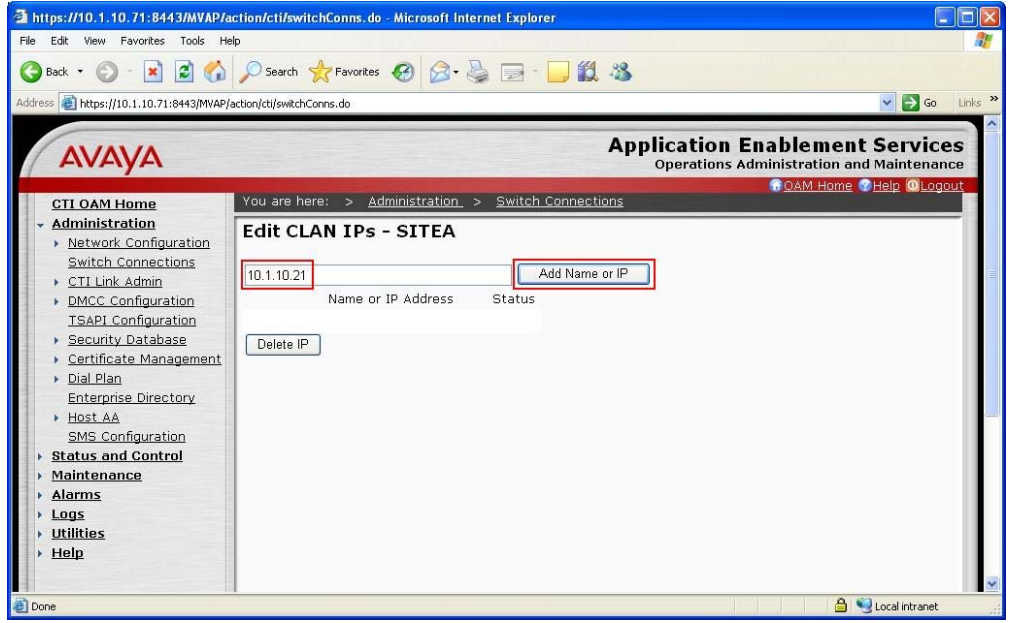

Step	Description
2.	<p>Click User Management, then User Management > Add User in the left pane. Specify a value for User Id, Common Name, Surname, User Password and Confirm Password. Set CT User to Yes. Use the values for User Id and User Password to configure Grandsys LOG8000 in Section 5.2 Step 4 to access the TSAPI Services on the AES server. Scroll down to the bottom of the page and click Apply (not shown).</p> 

4.2. Verify Avaya Application Enablement Services License

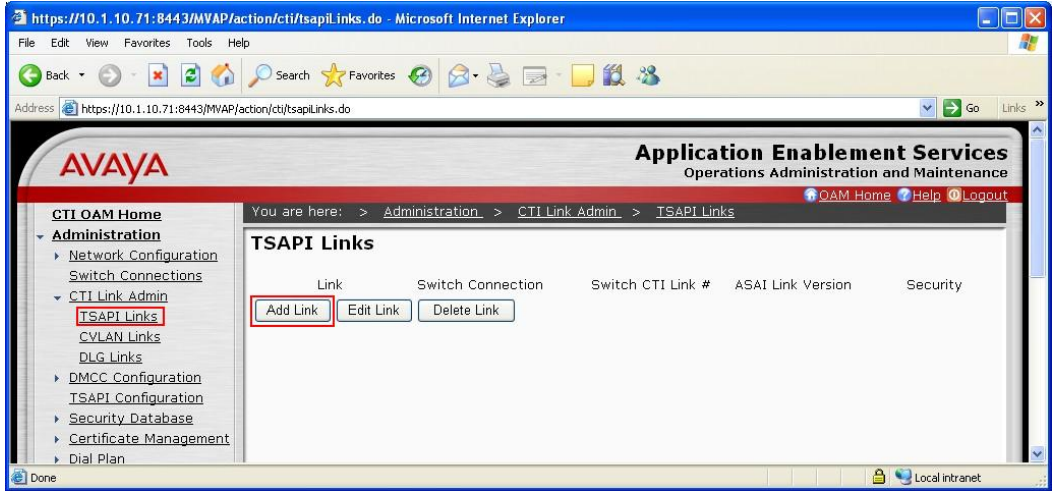

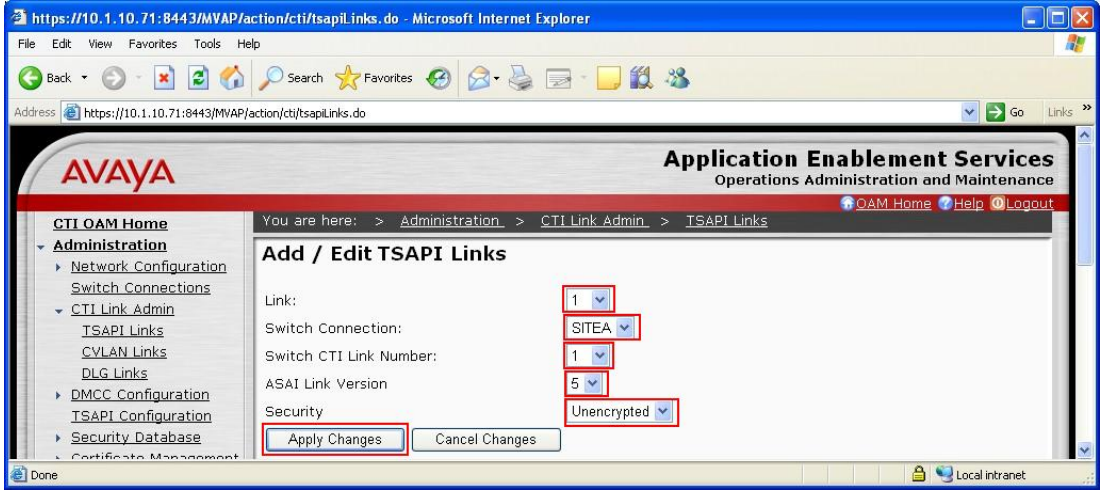

Step	Description														
1.	<p>Select OAM Home, then click on CTI OAM Administration from the left menu (not shown). From the Welcome to CTI OAM screen, verify that the Avaya Application Enablement Services license has proper permissions for the features illustrated in these Application Notes by ensuring the TSAPI service is licensed. If the TSAPI service is not licensed, then contact the Avaya sales team or business partner for a proper license file.</p>  <p>The screenshot shows the 'Welcome to CTI OAM Screens' page in a Microsoft Internet Explorer browser. The page title is 'Application Enablement Services Operations Administration and Maintenance'. The left navigation menu includes 'CTI OAM Home', 'Administration', 'Status and Control', 'Maintenance', 'Alarms', 'Logs', 'Utilities', and 'Help'. The main content area displays the following information:</p> <ul style="list-style-type: none">Welcome to CTI OAM Screens[craft] Last login: Thu Aug 14 15:24:20 2008 from 10.1.10.151IMPORTANT: AE Services must be restarted for administrative changes to fully take effect. Changes to the Security Database do not require a restart.Service Controller Status<table><thead><tr><th>Service</th><th>Controller Status</th></tr></thead><tbody><tr><td>ASAI Link Manager</td><td>Running</td></tr><tr><td>DMCC Service</td><td>Running</td></tr><tr><td>CVLAN Service</td><td>Running</td></tr><tr><td>DLG Service</td><td>Running</td></tr><tr><td>Transport Layer Service</td><td>Running</td></tr><tr><td>TSAPI Service</td><td>Running</td></tr></tbody></table>For status on actual services, please use Status and Control.License Information<p>You are licensed to run Application Enablement (CTI) version 4.0.</p><p>You are licensed for the following services</p><ul style="list-style-type: none">• DLG• CVLAN• TSAPI• SMS	Service	Controller Status	ASAI Link Manager	Running	DMCC Service	Running	CVLAN Service	Running	DLG Service	Running	Transport Layer Service	Running	TSAPI Service	Running
Service	Controller Status														
ASAI Link Manager	Running														
DMCC Service	Running														
CVLAN Service	Running														
DLG Service	Running														
Transport Layer Service	Running														
TSAPI Service	Running														

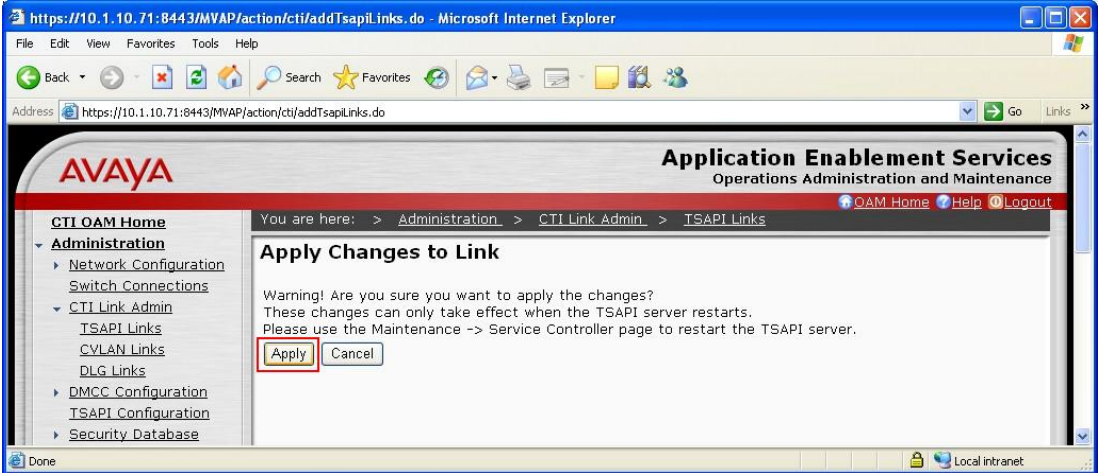

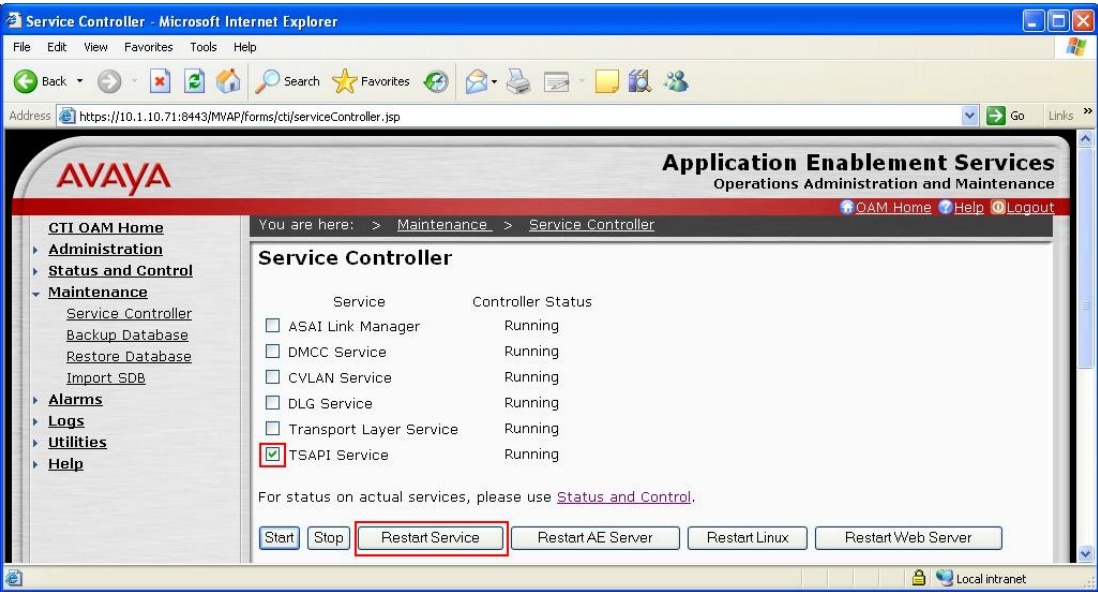

4.3. Administer Switch Connection

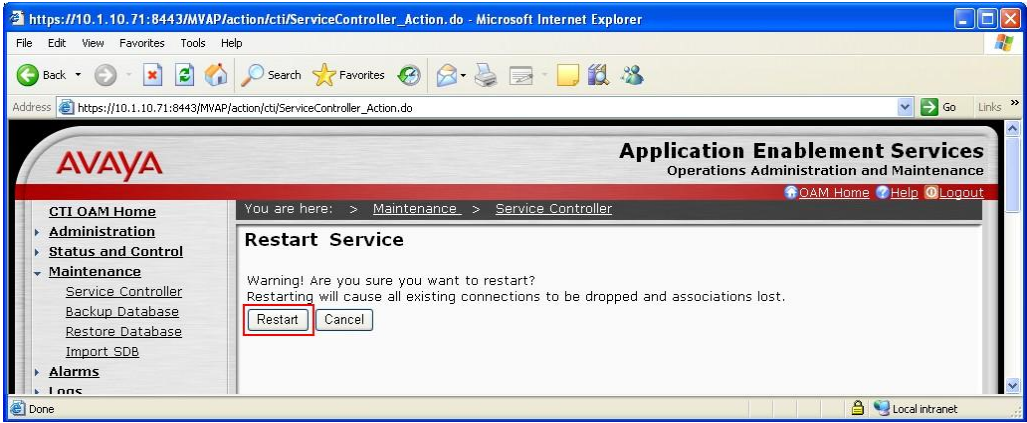

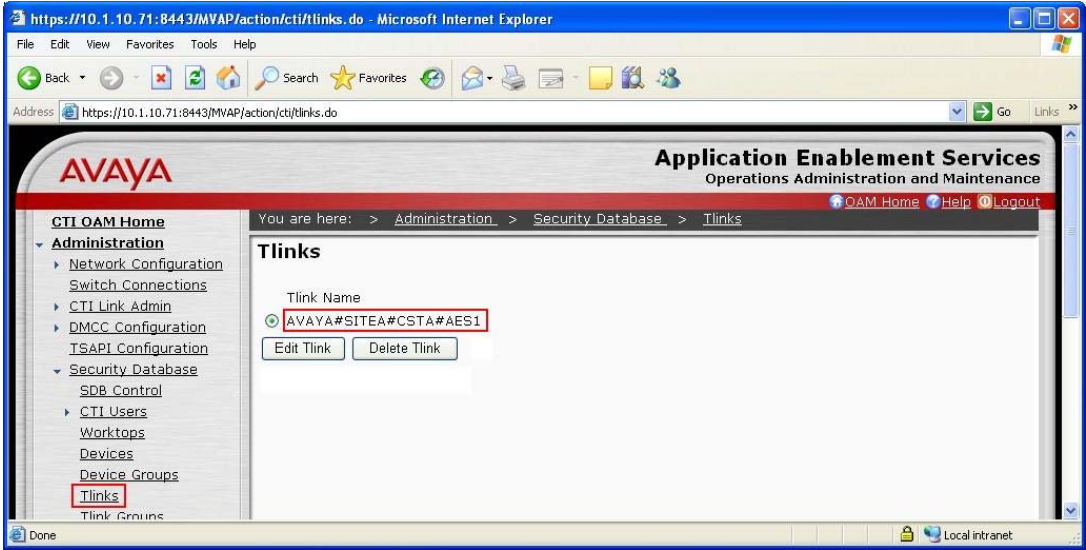

Step	Description
1.	<p>From the CTI OAM Home menu, select Administration > Switch Connections. Enter a descriptive name for the switch connection and click Add Connection. In this case, SITEA is used.</p> 
2.	<p>The Set Password screen is displayed. Select CTI/Call Information for Switch Connection Type. For the Switch Password and Confirm Switch Password fields, enter the password that was administered in Avaya Communication Manager using the IP Services form in Section 3.1 Step 4. The SSL field needs to be checked for the S8500 Server. Click Apply.</p> 

Step	Description
3.	<p>The Switch Connections screen is displayed. Select the newly added switch connection name and click Edit CLAN IPs.</p> 
4.	<p>In the Edit CLAN IPs screen, enter the host name or IP address of the C-LAN used for AES connectivity. In this case, 10.1.10.21 is used, which corresponds to the IP address of the C-LAN administered on Avaya Communication Manager in Section 3.1 Step 3. Click Add Name or IP.</p> 

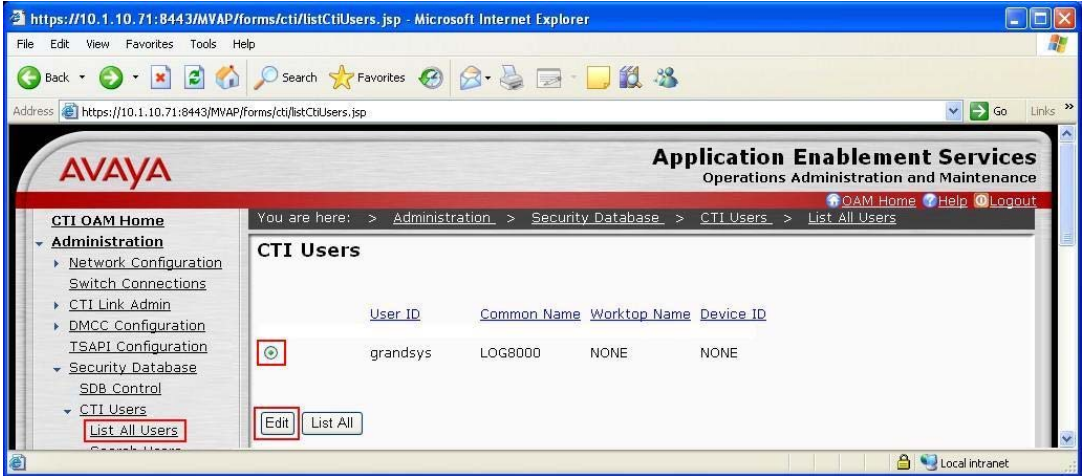

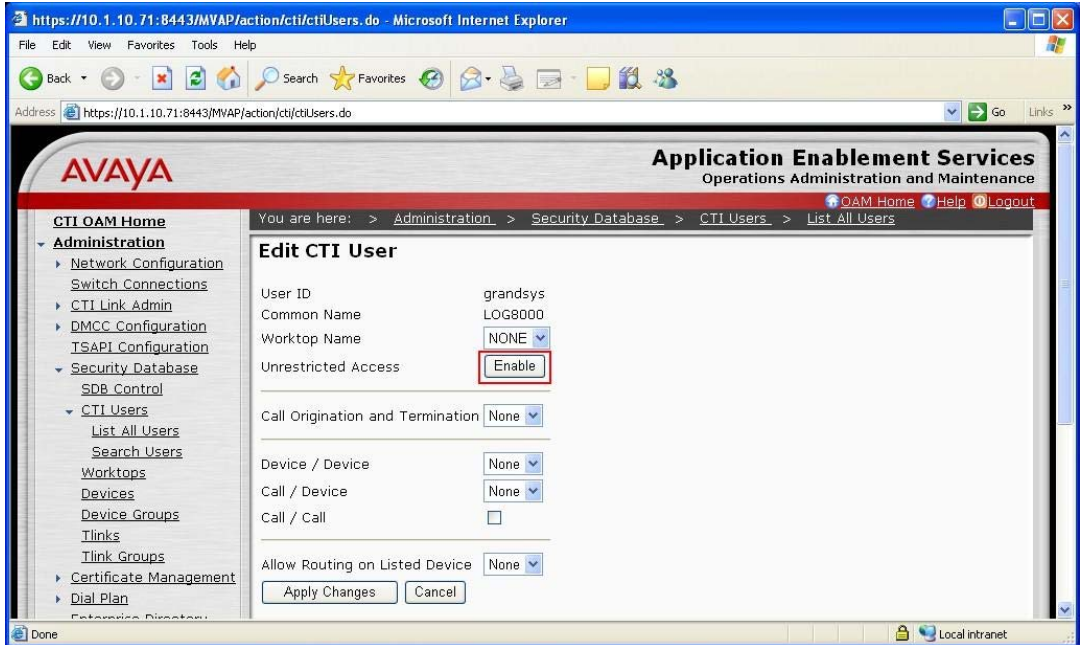

4.4. Administer TSAPI Link

Step	Description
1.	<p>To administer a TSAPI link on AES, select Administration > CTI Link Admin > TSAPI Links from the CTI OAM Home menu. Click Add Link.</p> 
2.	<p>In the Add / Edit TSAPI Links screen, select the following values:</p> <ul style="list-style-type: none">• Link: Select an available Link number from 1 to 16.• Switch Connection: Administered switch connection in Section 4.3 Step 1.• Switch CTI Link Number: Corresponding CTI link number in Section 3.1 Step 2.• ASAI Link Version: Set to either 4 or 5.• Security: Unencrypted TSAPI Links are used. <p>Note that the actual values may vary. Click Apply Changes.</p> 

Step	Description
	<p>Click Apply to confirm the changes.</p> 
3.	<p>To restart the TSAPI Service, select Maintenance > Service Controller from the CTI OAM Home menu. Check the TSAPI Service checkbox and click Restart Service.</p> 

Step	Description
	<p>Click Restart to confirm the restart.</p> 
4.	<p>Navigate to the Tlinks screen by selecting Administration > Security Database > Tlinks from the CTI OAM Home menu. Note the value of the Tlink Name, as this will be needed to configure the Grandsys LOG8000 Server in Section 5.2 Step 4. In this configuration, the Tlink Name is AVAYA#SITEA#CSTA#AES1, which is automatically assigned by the AES server.</p> 

4.5. Administer CTI User Permission

Step	Description
1.	<p>Select Administration > Security Database > CTI Users > List All Users from the CTI OAM Home menu. Select the User ID created in Section 4.1 Step 2 and click Edit.</p> 
2.	<p>Assign access rights and call/device privileges according to customer requirements. For simplicity in configuration, Unrestricted Access was enabled during compliance testing. If Unrestricted Access is not desired, then consult [1] for guidance on configuring the call/device privileges as well as devices and device groups. Click Enable.</p> 

Step	Description
	<p>Click Apply to apply the changes.</p> 

5. Configure Grandsys LOG8000

Grandsys installs, configures, and customizes the Grandsys LOG8000 application for their end customers. This section only describes the interface configuration for the Grandsys LOG8000 application to communicate with Avaya AES and Avaya Communication Manager. Refer to [3] and [4] for configuring the Grandsys LOG8000 application.

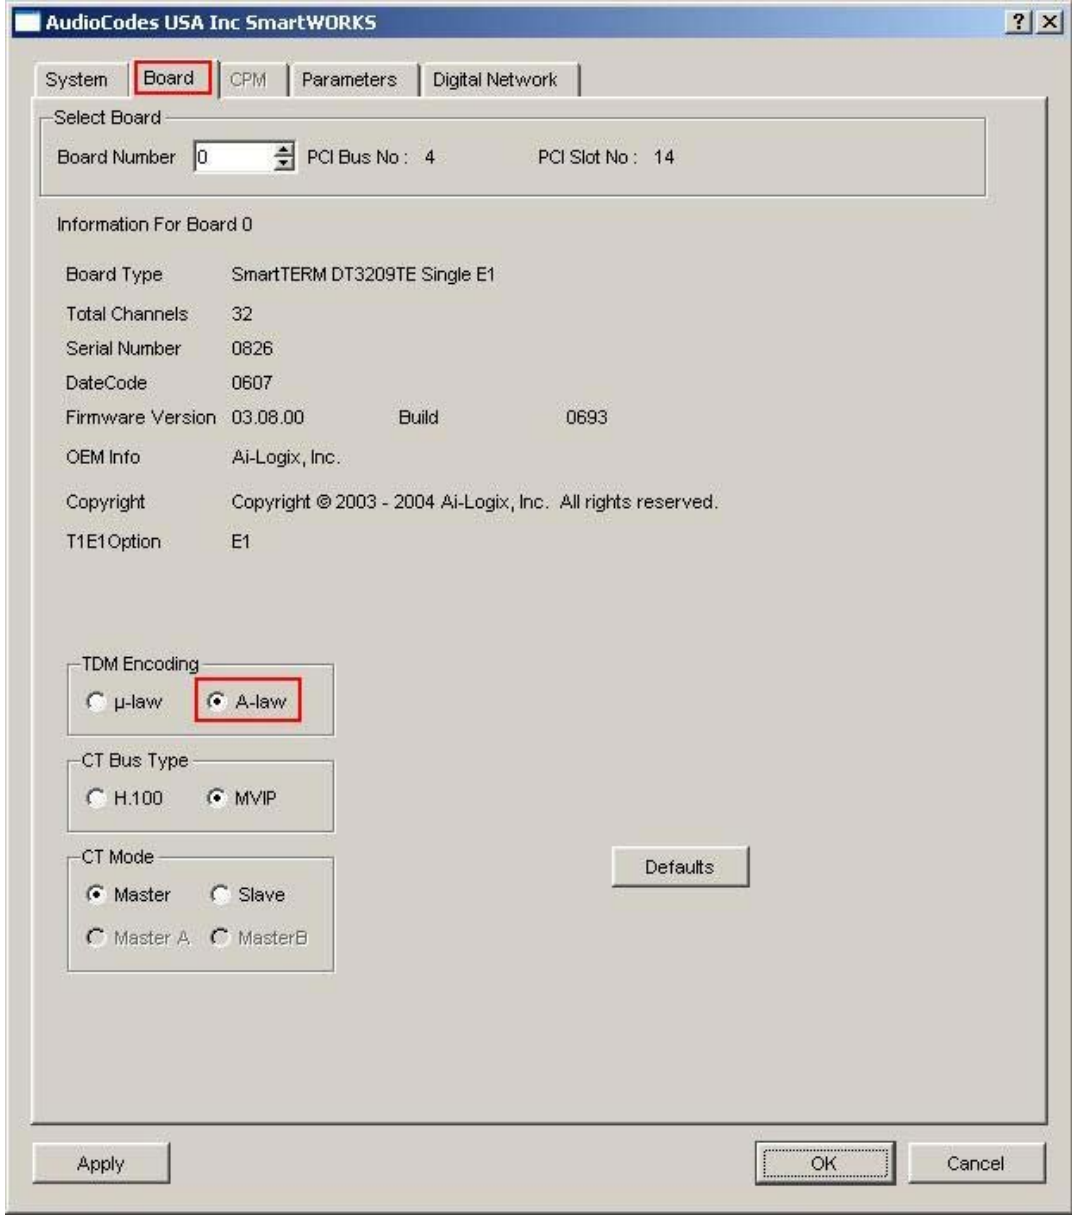

5.1. Install Avaya AES TSAPI Client Software

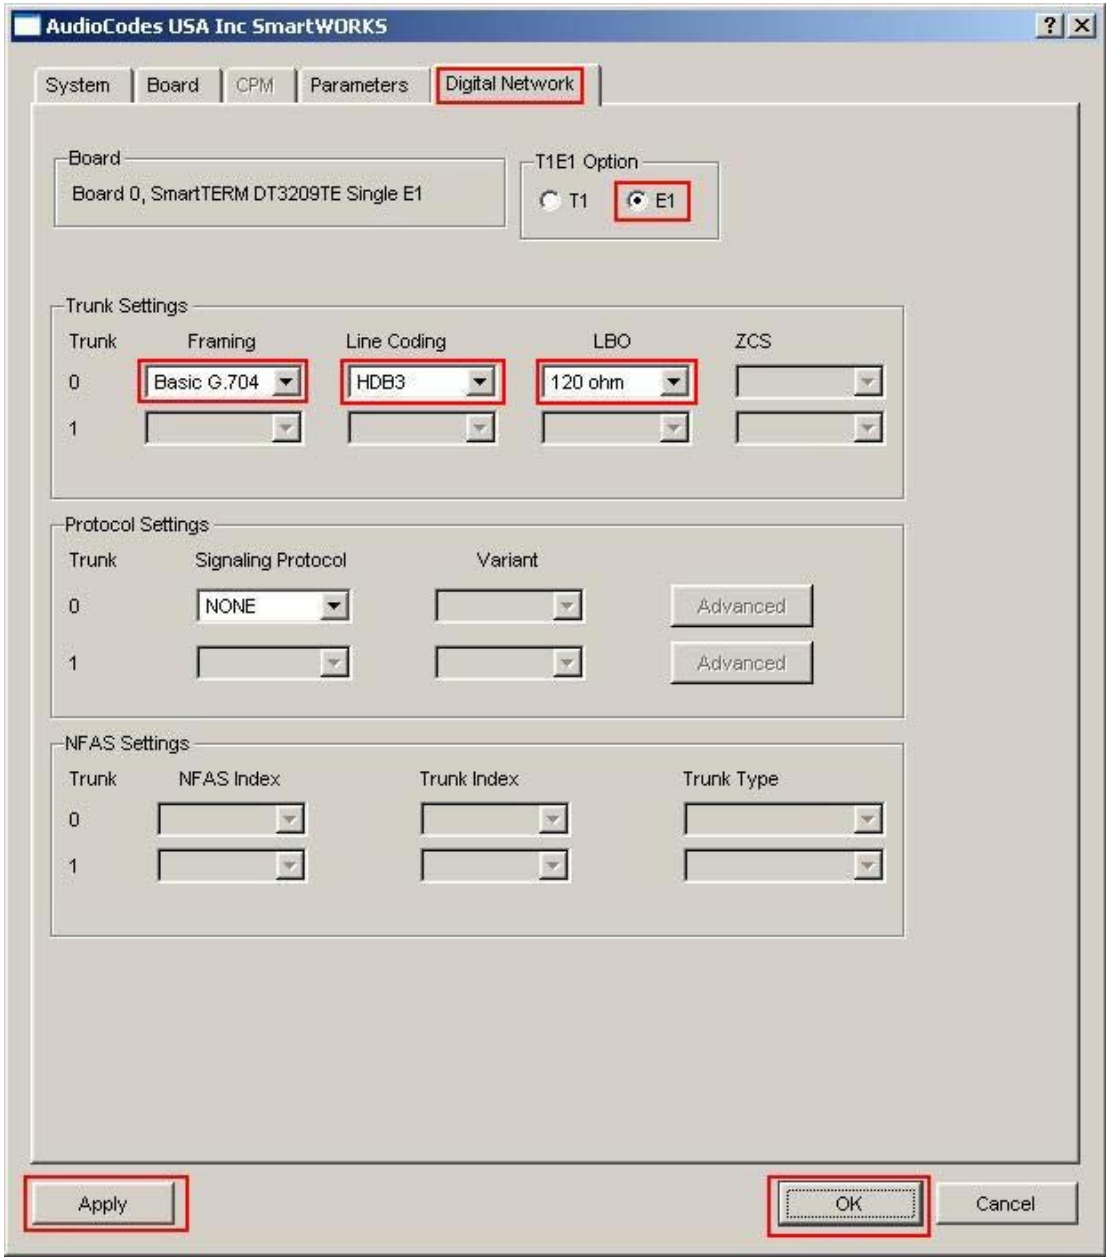

Grandsys LOG8000 uses the Avaya AES TSAPI Client software to communication with the TSAPI Service on the AES server. The Avaya AES TSAPI Client software will be provided by Grandsys, or it can also be downloaded from Avaya Support website (<http://support.avaya.com>).

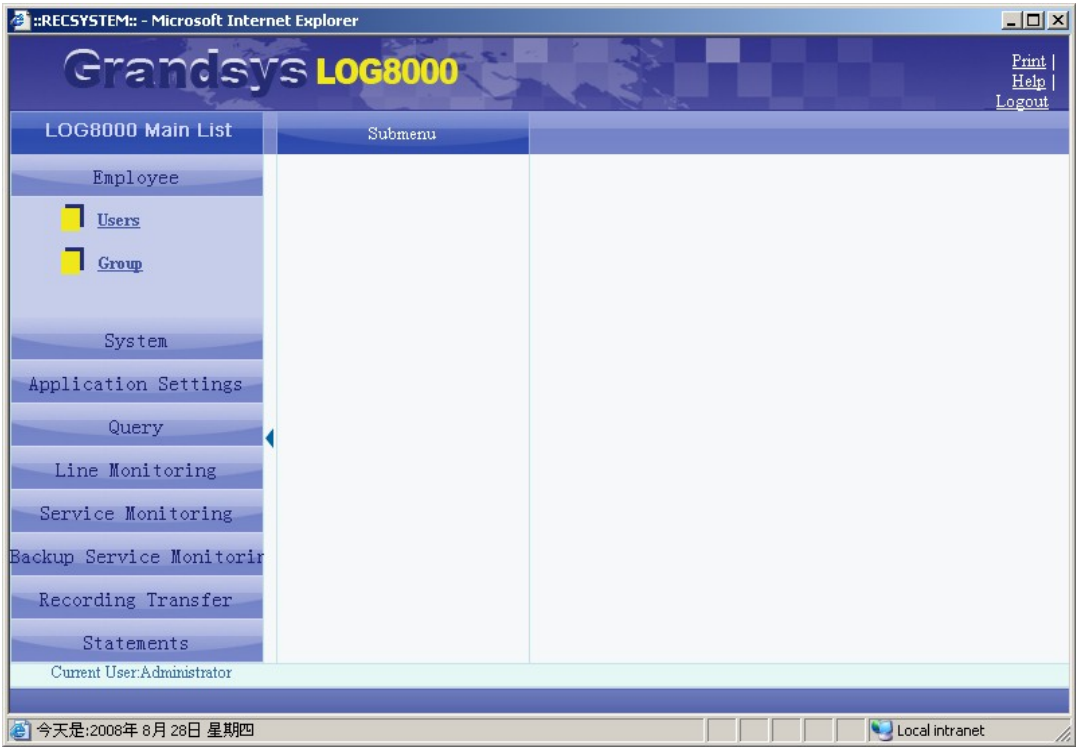

The installation runs through the following steps:

- A welcome window will be displayed. Click **Next** to continue.
- Accept the **Destination Folder** and click **Next**.
- In the **Host Name or IP Address** field, enter the IP address of the AES server and click **Add to List**. In this configuration, enter **10.1.10.71**. Click **Next**.
- At the end of installation process click **Finish**.

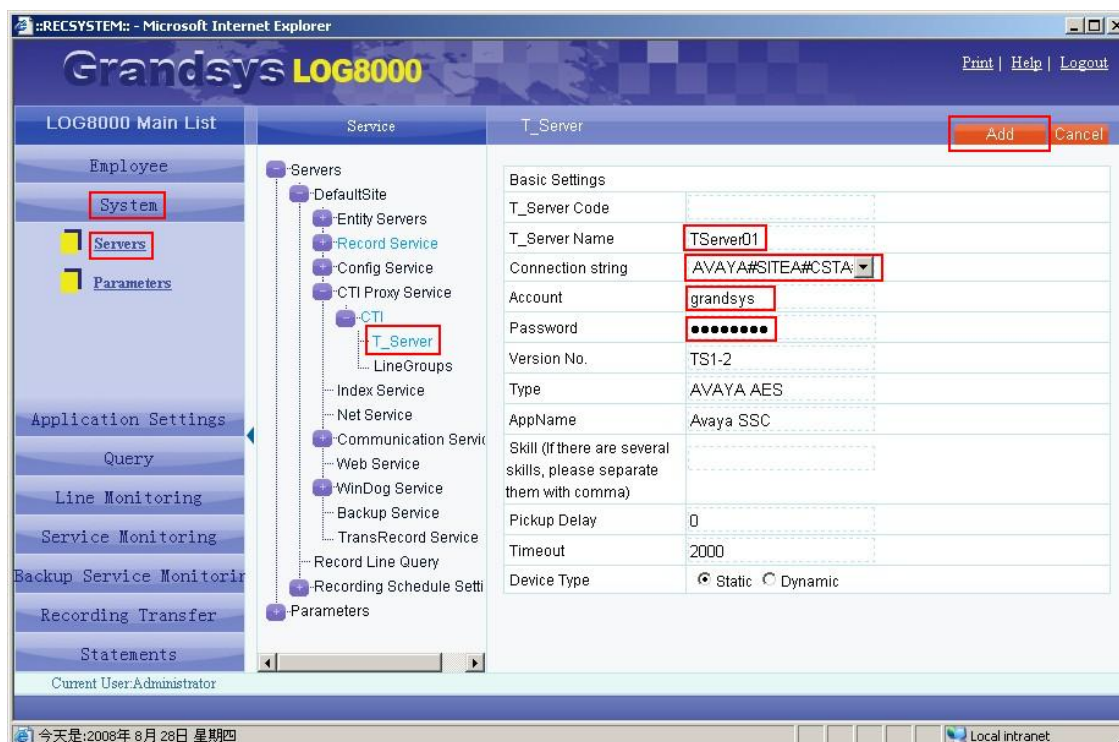

5.2. Configure Grandsys LOG8000

Step	Description
1.	<p>On the Grandsys LOG8000 Server, click Start > Control Panel > SmartControl to configure the E1 board. Click on the Board tab and set TDM Encoding to A-law to match the DS1 board setting configured in Section 3.2 Step 1.</p> 

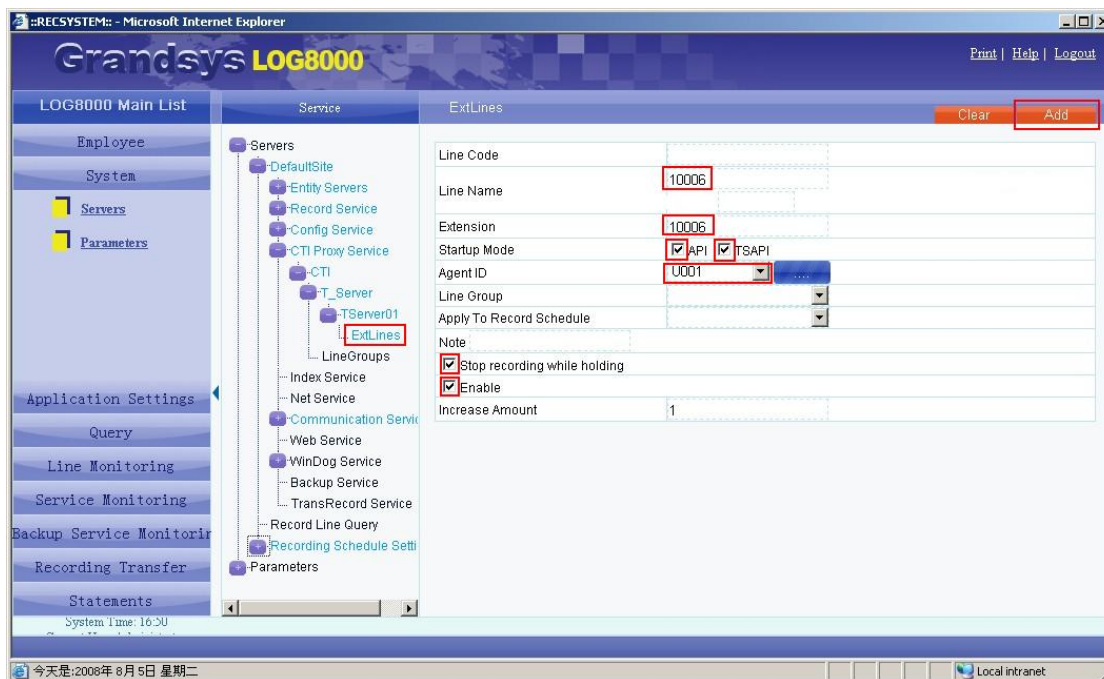

Step	Description
2.	<p>Click on the Digital Network tab. Set T1E1 Option to E1, Framing to Basic G.704, Line Coding to HDB3 and LBO to 120 ohm. These settings must match the DS1 board setting configured in Section 3.2 Step 1. Click Apply to save the settings and click OK. Restart the server to effect the changes to the E1 board.</p> 

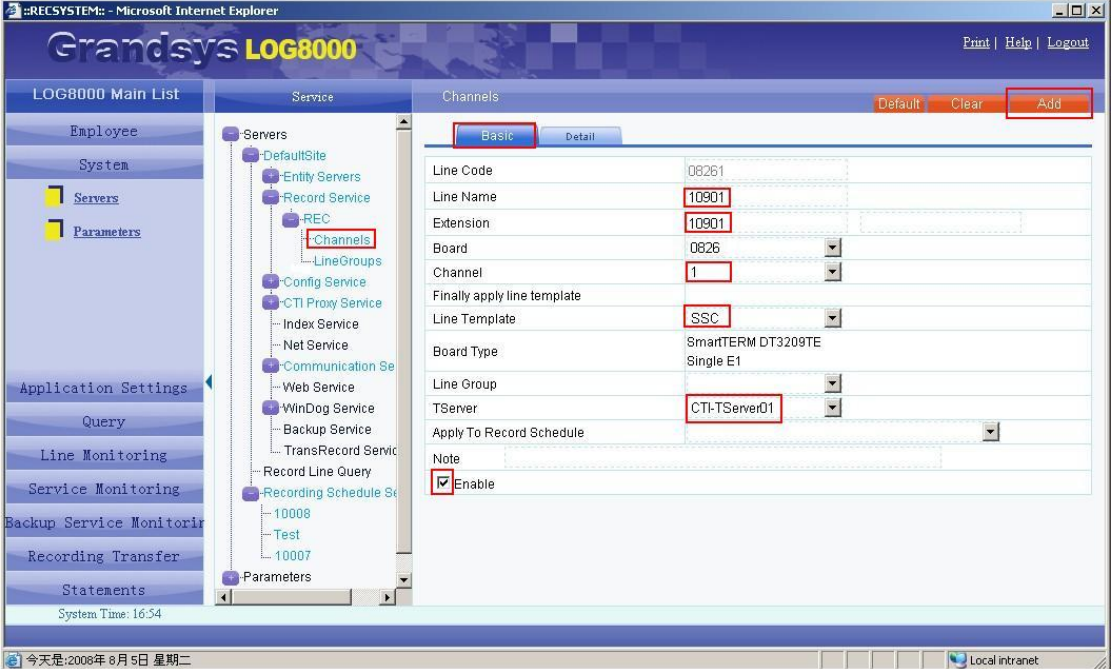

Step	Description
3.	<p>Launch a web browser and enter http://<IP address of Grandsys LOG8000 Server>/record/ to access the Grandsys LOG8000 web based interface. Log in using an administrative login and password (not shown) and the following screen will be displayed.</p> 

Step	Description
4.	<p>Click System > Servers on the left-most pane. To configure the settings for TSAPI, expand Servers > DefaultSite > CTI Proxy Service > CTI in the center pane and click on T_Server. On the right-most pane, enter a descriptive value for T_Server Name and select the TSAPI Link noted down in Section 4.4 Step 4 for the Connection string. Set Account and Password to the User Id and User Password configured in Section 4.1 Step 2 respectively. The rest of the fields are left at their default values. Click Add.</p>

Step	Description
5.	<p>To configure the extensions to be recorded, expand Servers > DefaultSite > CTI Proxy Service > CTI > T_Server > <Name of T_Server created in Step 4> in the center pane and click on ExtLines. On the right-most pane, enter the following values:</p> <ul style="list-style-type: none"> • Line Name: Enter a descriptive name • Extension: Phone extension to be recorded • Startup Mode > API: Check • Startup Mode > TSAPI: Check • Agent ID: Select from the list a user configured in Grandsys LOG8000 • Stop recording while holding: Check (recording stops when the call is put on hold and resumes when unhold) • Enable: Check <p>Click Add. Repeat this step for all extensions to be recorded. In this configuration, extensions 10006 to 10009 are configured.</p>

Step	Description
6.	<p>To configure the recording stations, expand Servers > DefaultSite > Record Service > REC in the center pane and click on Channels. On the right-most pane, enter the following values:</p> <ul style="list-style-type: none"> • Line Name: Enter a descriptive name • Extension: Extension of recording station configured in Section 3.2 Step 2. • Channel: Enter a value from 1 to 30 which correspond to the Port configured in Section 3.2 Step 2. • Line Template: Select SSC • TServer: Select the TServer configured in Step 4. • Enable: Check <p>Click Add. Repeat this step to add more recording stations. In this configuration, recording stations 10901 to 10910 are configured.</p> 

6. Interoperability Compliance Testing

The interoperability compliance test included feature and serviceability testing. The feature testing evaluated the ability of Grandsys LOG8000 to monitor and record calls placed to and from stations and agents. The serviceability testing introduced failure scenarios to see if Grandsys LOG8000 can resume recording after failure recovery.

6.1. General Test Approach

The general approach was to place various types of calls to and from stations, agents, and Vector Directory Numbers (VDNs), monitor and record them using Grandsys LOG8000, and verify the

recordings. For feature testing, the types of calls included internal calls, inbound and outbound trunk calls, transferred calls, and conferenced calls. For serviceability testing, failures such as disconnecting the LAN cable to the Grandsys LOG8000 Server and Avaya AES Server, and resetting the Grandsys LOG8000 Server and Avaya Communication Manager were applied.

6.2. Test Results

All test cases were executed and passed.

7. Verification Steps

This section provides the tests that can be performed to verify proper configuration of Avaya Communication Manager, Avaya Application Enablement Services and Grandsys LOG8000.

7.1. Verify Avaya Communication Manager

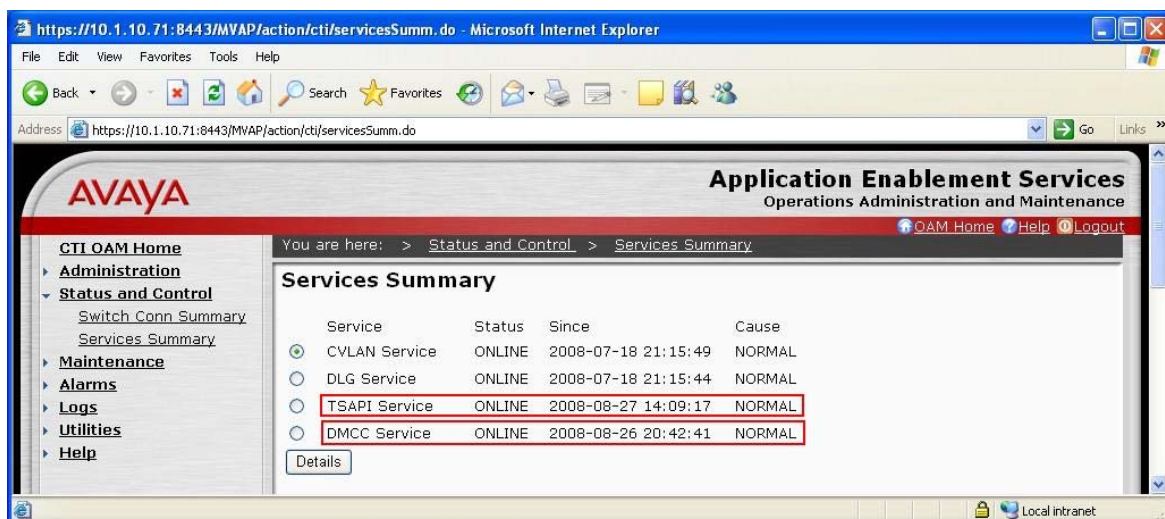

Verify the status of the administered TSAPI CTI link by using the **status aesvcs cti-link** command. The **Service State** field should display **established**.

```
status aesvcs cti-link
```

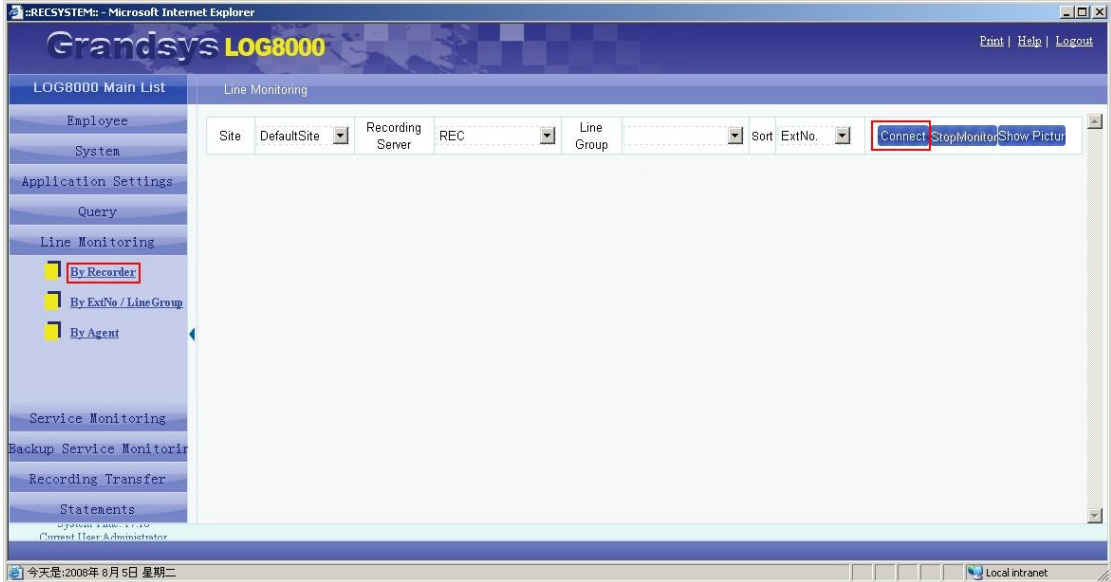

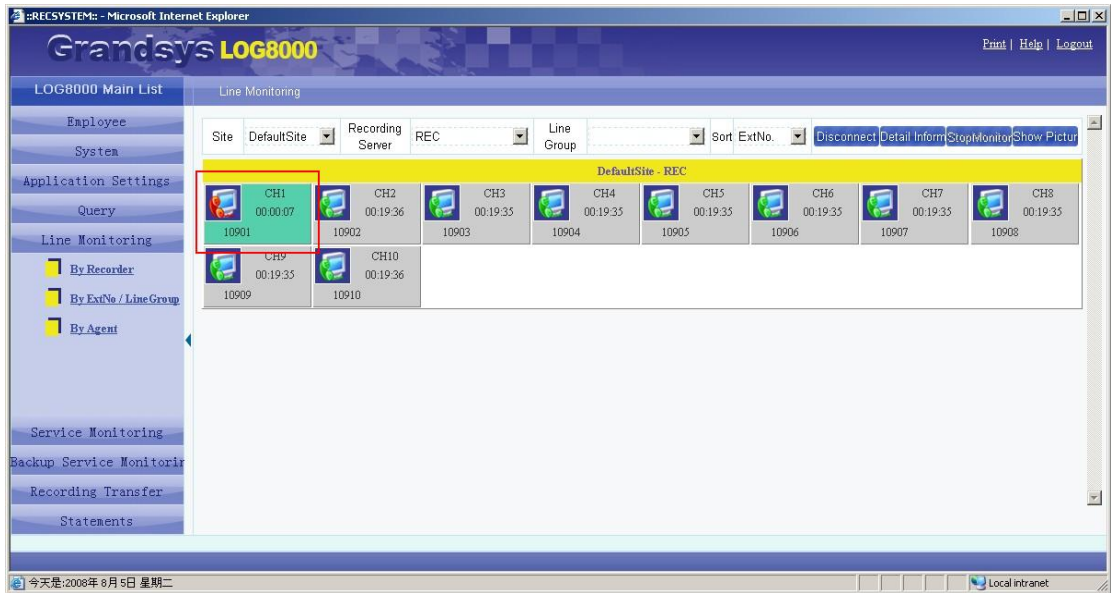

AE SERVICES CTI LINK STATUS						
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd
1	5	no	aes1	established	33	45

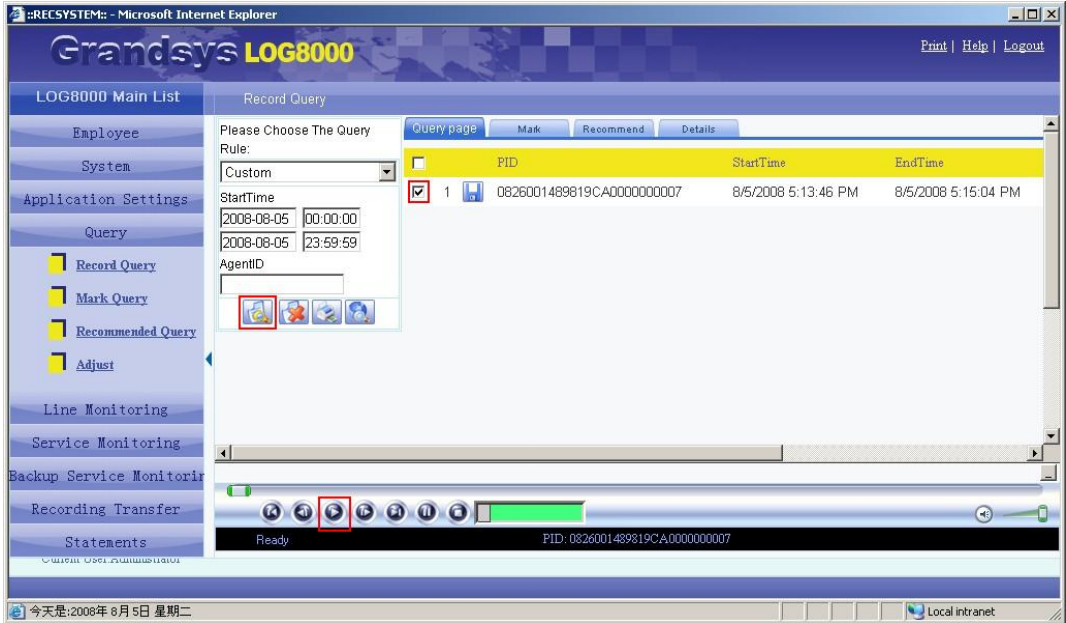

7.2. Verify Avaya Application Enablement Services

From the CTI OAM Admin web pages, verify the status of the TSAPI and DMCC Services by selecting **Status and Control > Services Summary** from the left pane. The **Status** field for both **TSAPI Service** and **DMCC Service** should display **ONLINE**.

7.3. Verify Grandsys LOG8000

Step	Description
1.	<p>From the Grandsys LOG8000 Server, launch a web browser and log in to the Grandsys LOG8000 web based interface. Select Line Monitoring > By Recorder on the left pane and click Connect on the right pane.</p> 
2.	<p>Place a test call to an extension being recorded and verify that one of the recording stations on Grandsys LOG8000 becomes active as it records the call.</p> 

Step	Description
3.	<p>Query for the recording of the test call. Verify that the recording can be played back correctly.</p> 

8. Support

For technical support on Grandsys LOG8000, contact Grandsys at:

- Phone: +886-2-87682715
- Email: service@grandsys.com

9. Conclusion

These Application Notes illustrate the procedures for configuring Grandsys Technology & Service LOG8000 to monitor and record calls placed to and from stations and VDNs on an Avaya Communication Manager system. In the configuration described in these Application Notes, Grandsys LOG8000 uses the Single Step Conference feature of the TSAPI Service of Avaya Application Enablement Services to perform recording. All test cases were completed successfully.
