

## **Avaya Solution & Interoperability Test Lab**

---

# **Application Notes for configuring Axis Communications AB AXIS A8105-E Network Video Door Station with Avaya Aura® Communication Manager R7.x and Avaya Aura® Session Manager R7.x – Issue 1.1**

## **Abstract**

These Application Notes describe the configuration steps for provisioning the AXIS A8105-E Network Video Door Station from Axis Communications AB to interoperate with Avaya Aura® Communication Manager and Avaya Aura® Session Manager.

Readers should pay particular attention to the scope of testing as outlined in **Section 2.1**, as well as observations noted in **Section 2.2** to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

# 1. Introduction

These Application Notes describe the configuration steps for provisioning the AXIS A8105-E Network Video Door Station from Axis Communications AB to interoperate with Avaya Aura® Communication Manager R7.x and Avaya Aura® Session Manager R7.x.

AXIS A8105-E Network Video Door Station is an open, non-proprietary IP-based door station for two-way communication, identification and remote entry control. It is a robust outdoor unit with a high performing intercom function providing clear, uninterrupted an echo-free speech also in the most demanding situations.

The unit supports Session Initiation Protocol (SIP) for easy integration with Communication Manager to meet advanced audio and video communication needs. AXIS A8105-E is equipped with multiple inputs and outputs for remote control of door locks as well as other equipment.

## 2. General Test Approach and Test Results

The interoperability compliance testing evaluates the ability of the AXIS A8105-E Network Video Door Station (Axis Door Phone) to make and receive calls to and from Avaya Digital, H.323 and SIP desk phones as well as hunt groups, mobile/PSTN endpoints and a video enabled softphone. The Axis 8105-E Network Video Door Station is registered on Session Manager as a third-party SIP endpoint associated with a Communication Manager extension.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya's formal testing and Declaration of Conformity is provided only on the headsets/Smartphones that carry the Avaya brand or logo. Avaya may conduct testing of non-Avaya headset/handset to determine interoperability with Avaya phones. However, Avaya does not conduct the testing of non-Avaya headsets/Smartphones for: Acoustic Pressure, Safety, Hearing Aid Compliance, EMC regulations, or any other tests to ensure conformity with safety, audio quality, long-term reliability or any regulation requirements. As a result, Avaya makes no representations whether a particular non-Avaya headset will work with Avaya's telephones or with a different generation of the same Avaya telephone.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in these DevConnect Application Notes included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with these Application Notes, the interface between Avaya systems and the Axis Door Phone did not include use of any specific encryption features as requested by Axis Communications AB.

## 2.1. Interoperability Compliance Testing

The compliance testing included the test scenarios shown below. Note that when applicable, all tests were performed with Avaya SIP phones, H.323 phones Digital phones, and PSTN endpoints.

- Registration of door phone.
- Invalid usernames/passwords for registration.
- Basic calls.
- Transfer/Conference/Forwarding.
- Codec support.
- DTMF support.
- Video call.
- Serviceability testing.

## 2.2. Test Results

All test cases passed successfully with the following issues which were noted during testing.

1. Using AXIS A8105-E Network Video Door Station to overflow calls from one Communication Manager phone to another in the event of a “no answer” from the initial phone, the call fails to overflow and the second phone does not ring, the call remains indefinitely on the first phone. Note this same scenario works fine for a “busy” extension. The next release of software from Axis Communications should fix this issue.

## 2.3. Support

Support from Avaya is available by visiting the website <http://support.avaya.com> and a list of product documentation can be found in **Section 10** of these Application Notes. Technical support for the AXIS A8105-E Network Video Door Station product can be obtained as follows:

### Axis Communications AB

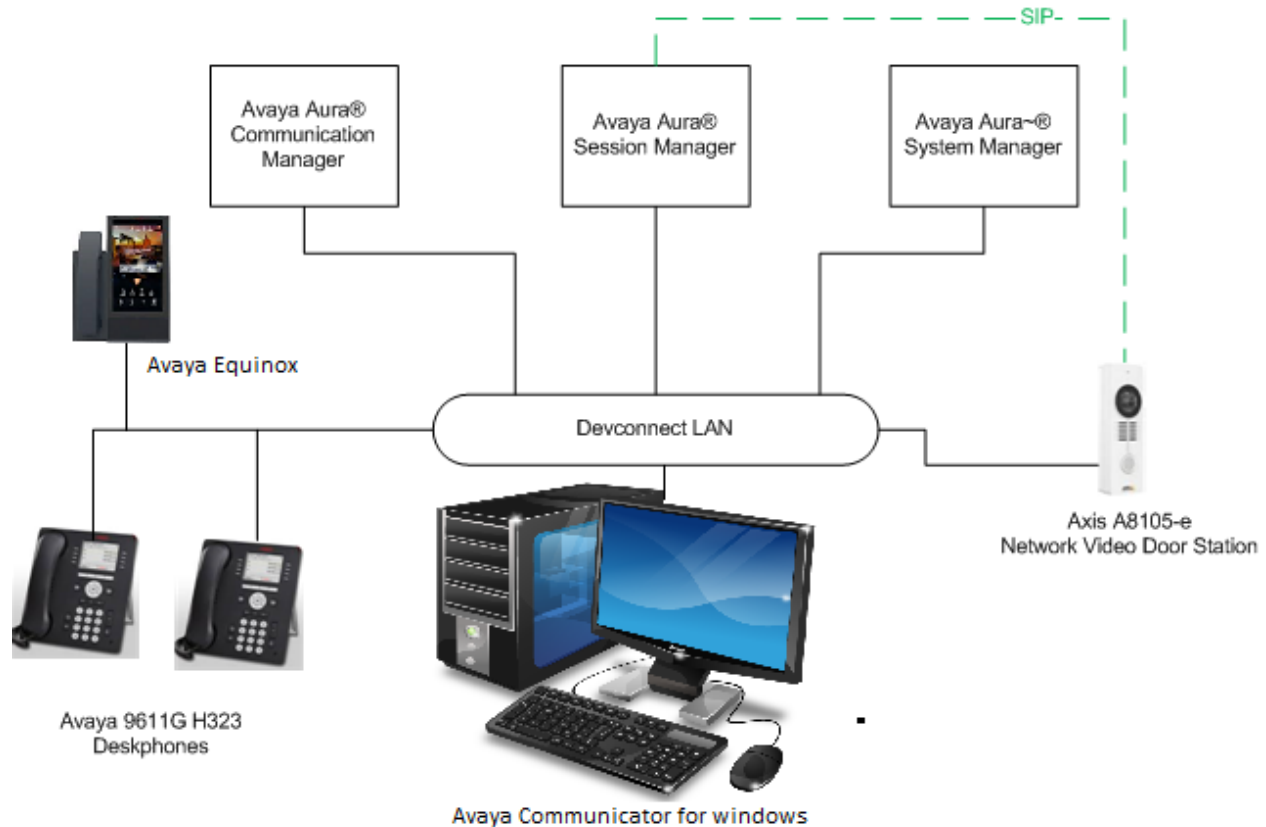

Tel: +46 46 272 18 00

Fax: +46 46 13 61 30

<http://www.axis.com/global/en/learning-and-support>

### 3. Reference Configuration

**Figure 1** shows the network topology during compliance testing, an AXIS A8105-E Network Video Door Station from Axis Communications AB with Communication Manager and Session Manager.

**Figure 1: Connection of Axis Communications AB A8105-E Network Video Door Station with Avaya Aura® Communication Manager and Avaya Aura® Session Manager**

## 4. Equipment and Software Validated

The following equipment and software was used for the compliance test.

Equipment/Software	Version/Release
Avaya Aura® System Manager running on a virtual server	R 7.0.1.2 Revision 7.0.1.2.075662 Service Pack 2 & R7.1.2.0, 7.1.2.0.057353 Feature Pack 2
Avaya Aura® Session Manager running on a virtual server	R 7.0.1.1.701114 & R7.1 FP2 Build No. – 7.1.2.0.712004
Avaya Aura® Communication Manager running on Virtual Server	R 7.0.1.1.0.441.23169 & R017x.01.0.532.0 R7.1.1.0.0 - FP1 - 01.0.532.0-23985
Avaya 9611G Deskphone	H.323 Release 6.6029
Avaya 9611G Deskphone	SIP 7.0.1.1
Avaya 2420 Digital Deskphone	V 2.0
Avaya Communicator for Windows	V 2.1.3
Avaya Equinox for Windows	V3.3.1.60
Avaya Equinox for iOS	V3.3.1.1
Avaya Equinox for Vantage	V3.3.1
Axis Communications AB AXIS A8105-E Network Video Door Station	Firmware Version 1.58.2.1 & 1.65.1.1

NOTE: Testing with Equinox was done after the initial test for a special request, and Axis engineers were not involved in the testing. Only Equinox was tested with the 7.1 versions of Aura, and with the 1.65.1.1 version of the AXIS A8105-E. All other testing was done with the previous releases.

## 5. Configure Avaya Aura® Communication Manager

Configuration and verification operations on Communication Manager illustrated in this section were all performed using Avaya Site Administrator Emulation Mode. The information provided in this section describes the configuration of Communication Manager for this solution. It is implied a working system is already in place, including SIP trunks to a Session Manager. For all other provisioning information such as initial installation and configuration, please refer to the product documentation in **Section 10**. The configuration described in this section can be summarized as follows:

- Verify System Capacity
- Define the Dial Plan
- Configure IP-Codec Set

**Note:** Any settings not in **Bold** in the following screen shots may be left as default.

### 5.1. Verify System Capacity

The license file installed on the system controls these attributes. If a required feature is not enabled or there is insufficient capacity, contact an authorized Avaya sales representative. Use the **display system-parameters customer-options** command to determine these values. On **Page 1**, verify that the **Maximum Off-PBX Telephones** allowed in the system is sufficient. One OPS station is required per SIP device.

```
display system-parameters customer-options                               Page 1 of 10
                                OPTIONAL FEATURES

G3 Version: V16                                     Software Package: Enterprise
Location: 2                                           System ID (SID): 1
Platform: 28                                         Module ID (MID): 1

                                USED
Platform Maximum Ports: 65000 290
Maximum Stations: 41000 44
Maximum XMOBILE Stations: 41000 0
Maximum Off-PBX Telephones - EC500: 41000 0
Maximum Off-PBX Telephones - OPS: 41000 14
Maximum Off-PBX Telephones - PBFMC: 41000 0
Maximum Off-PBX Telephones - PVFMC: 41000 0
Maximum Off-PBX Telephones - SCCAN: 41000 0
Maximum Survivable Processors: 313 0

(NOTE: You must logoff & login to effect the permission changes.)
```

On **Page 2** of the **System-Parameters Customer-Options form**, verify that the number of **Maximum Administered SIP Trunks** supported by the system is sufficient.

display system-parameters customer-options		Page	2 of 10
OPTIONAL FEATURES			
IP PORT CAPACITIES		USED	
Maximum Administered H.323 Trunks:		12000	16
Maximum Concurrently Registered IP Stations:		18000	2
Maximum Administered Remote Office Trunks:		12000	0
Maximum Concurrently Registered Remote Office Stations:		18000	0
Maximum Concurrently Registered IP eCons:		414	0
Max Concur Registered Unauthenticated H.323 Stations:		100	0
Maximum Video Capable Stations:		41000	1
Maximum Video Capable IP Softphones:		18000	4
<b>Maximum Administered SIP Trunks:</b>		<b>24000</b>	<b>180</b>
Maximum Administered Ad-hoc Video Conferencing Ports:		24000	0
Maximum Number of DS1 Boards with Echo Cancellation:		522	0
Maximum TN2501 VAL Boards:		128	0
Maximum Media Gateway VAL Sources:		250	0
Maximum TN2602 Boards with 80 VoIP Channels:		128	0
Maximum TN2602 Boards with 320 VoIP Channels:		128	0
Maximum Number of Expanded Meet-me Conference Ports:		300	0
(NOTE: You must logoff & login to effect the permission changes.)			

## 5.2. Define the Dial Plan

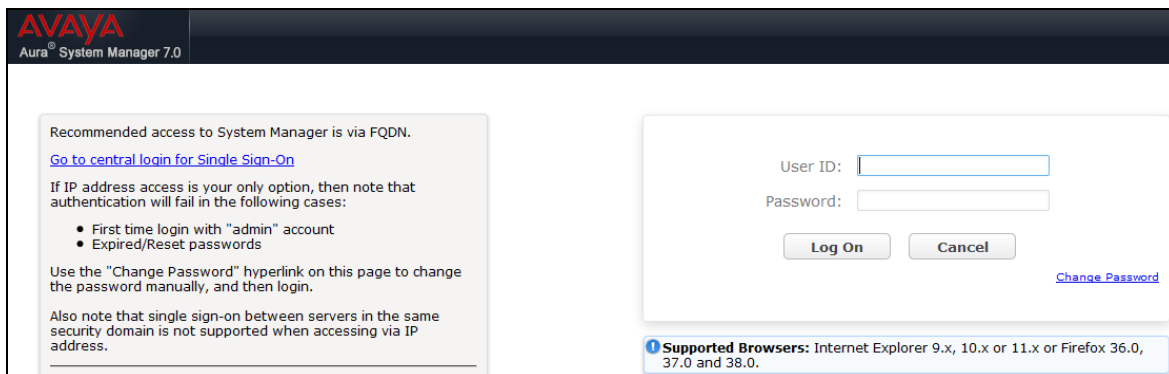

Use the **change dialplan analysis** command to define the dial plan used in the system. This includes all telephone extensions. In the sample configuration, telephone extensions are seven digits long and begin with **8**.

change dialplan analysis						Page 1 of 12

*	3	fac							
#	3	fac							

## 6. Configure Avaya Aura® Session Manager

This section describes aspects of the Session Manager configuration required for interoperating with the Axis 8105-E Video Door Station. It is assumed that the Domains, Locations, SIP entities for each Session Manager, Communication Manager and Entity Links, Routing Policies, Dial Patterns and Application Sequences have been configured.

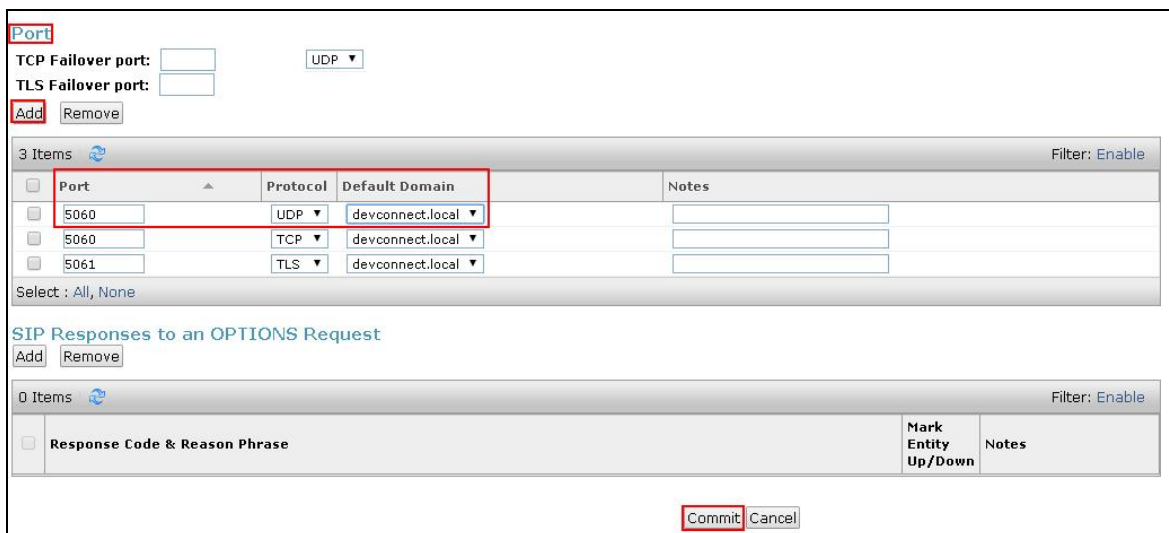

Session Manager is managed via System Manager. Using a web browser, access **https://<ip-addr of System Manager>/SMGR**. In the **Log On** screen, enter appropriate **User ID** and **Password** and click the **Log On** button.

The screenshot shows the Avaya Aura System Manager 7.0 Log On interface. On the left, there is a text box with instructions: "Recommended access to System Manager is via FQDN. Go to central login for Single Sign-On. If IP address access is your only option, then note that authentication will fail in the following cases: • First time login with 'admin' account • Expired/Reset passwords. Use the 'Change Password' hyperlink on this page to change the password manually, and then login. Also note that single sign-on between servers in the same security domain is not supported when accessing via IP address." On the right, there is a login form with fields for "User ID:" and "Password:", "Log On" and "Cancel" buttons, and a "Change Password" link. At the bottom right, a "Supported Browsers" banner lists: "Internet Explorer 9.x, 10.x or 11.x or Firefox 36.0, 37.0 and 38.0."

### 6.1. Check Session Manager ports for A8105-E Registration

Each Session Manager Entity must be configured so that the Video Door Station can register to it using UDP/TCP. From the web interface click **Routing** → **SIP Entities** (not shown) select the Session Manager entity used for registration. Make sure that **TCP** and **UDP** entries are present. The UDP entry is highlighted below.

The screenshot shows the "SIP Entities" configuration page. At the top, there are fields for "TCP Failover port:" and "TLS Failover port:" with a "UDP" dropdown menu. Below these are "Add" and "Remove" buttons. A table lists 3 items with columns: "Port", "Protocol", "Default Domain", and "Notes". The first row is highlighted with a red box and contains: "5060", "UDP", "devconnect.local", and an empty "Notes" field. The second row contains: "5060", "TCP", "devconnect.local", and an empty "Notes" field. The third row contains: "5061", "TLS", "devconnect.local", and an empty "Notes" field. Below the table is a "Select : All, None" dropdown. Underneath is a section titled "SIP Responses to an OPTIONS Request" with "Add" and "Remove" buttons. Below this is another table with 0 items, with columns: "Response Code & Reason Phrase", "Mark Entity Up/Down", and "Notes". At the bottom right, there are "Commit" and "Cancel" buttons.

Port	Protocol	Default Domain	Notes
5060	UDP	devconnect.local	
5060	TCP	devconnect.local	
5061	TLS	devconnect.local	

Repeat accordingly on the alternative Session Manager.

## 6.2. Add A8105-E User

The A8105-E Video Door Station must be added as a user. A user must be added for each A8105-E Video Door Station. Click **User Management** → **Manage Users** → **New** (not shown) and configure as following in the **Identity** tab.

- **First Name and Last Name** Enter an identifying name
- **Login Name** Enter the extension number followed by the domain, in this case **8275060@devconnect.local**
- **Authentication Type** Select **Basic** from the drop down list
- **Password and Confirm Password** Enter and confirm a password

The screenshot shows the 'New User Profile' form in the Avaya Aura System Manager 7.0 interface. The 'Identity' tab is selected, and the form contains the following fields:

- User Provisioning Rule:** A dropdown menu.
- Identity:**
  - Last Name:** Station
  - Last Name (Latin Translation):** Station
  - First Name:** Video
  - First Name (Latin Translation):** Video
  - Middle Name:** Door
  - Description:** (empty text area)
  - Login Name:** 8275060@devconnect.local
  - User Type:** Basic (dropdown menu)
  - Password:** (masked with dots)
  - Confirm Password:** (masked with dots)
  - Localized Display Name:** (empty text field)

Buttons at the top right include 'Commit & Continue', 'Commit', and 'Cancel'. The top navigation bar shows 'Home / Users / User Management / Manage Users'.

Click the **Communication Profile** tab and in the **Communication Profile Password** and **Confirm Password** fields, enter a numeric password. This will be used to register the Video Door Station during login.

**New User Profile** Commit & Continue Commit Cancel

## 7. Configure AXIS A8105-E Network Video Door Station

The configuration of the Axis door phone uses a web interface.

**Note:** The door phone obtains its IP address using DHCP and this was the way in which an IP address was given to the device during compliance testing.

Open a web session to the IP address of the Axis door phone, enter the appropriate credentials and click on **OK**.

Please refer to Axis Communications documentation listed in **Section 10** of these Application Notes for further information about the Axis door phone configuration. The following sections cover specific settings concerning SIP and the connection to Session Manager.

## 7.1. Configure SIP Settings

The initial step is to enable SIP-functionality as shown below. Some AXIS products have a SIP Setup Assistant that provides an easy setup for the entire product (like button-initiated calls on Network Video Door Station). This guide only shows how to set up an account in the AXIS product not the specific product capabilities. If a Setup Assistant is available, it's recommended to be used. The same configuration specified below can be applied in the assistant separate pages. Click on **VoIP → SIP Settings** in the left window, in the main window ensure that **Enable SIP** is ticked under **SIP Settings** and **Allow incoming SIP calls** under **Incoming SIP Calls**. Under the **Audio Codec Settings**, select the codecs that are to be used and click on **Save** once all is configured correctly.

## 7.2. Configure Account

Click on **Account Settings** under **VoIP** in the left window. Click on the **Add** button in the main window.

The screenshot displays the web interface for the AXIS A8105-E Network Video Door Station. The top navigation bar includes the AXIS logo, the device name, and links for Live View, Setup, and Help. A left sidebar contains a menu with categories like Basic Setup, Video & Audio, VoIP, Live View Config, Detectors, Applications, Events, Recordings, Languages, System Options, and About. The 'VoIP' category is expanded, showing sub-items: Overview, SIP Settings, VMS Settings, Account Settings (which is highlighted), and DTMF Settings. The main content area is titled 'Account Settings' and features a table with columns: Name, SIP address, Transport, Default, and Reg. status. Below the table are three buttons: 'Add...', 'Modify...', and 'Remove'. The 'Add...' button is highlighted with a red rectangle. Underneath these buttons is a section titled 'Test SIP Call' with the instruction 'Make a test call from the selected SIP account to the specified SIP address.' This section contains a text input field with the placeholder 'Enter SIP address: sip(s):extension@domain' and a 'Test call' button.

Name	SIP address	Transport	Default	Reg. status
------	-------------	-----------	---------	-------------

**Test SIP Call**  
Make a test call from the selected SIP account to the specified SIP address.  
Enter SIP address: sip(s):extension@domain

Enter the following details under the **General** tab:

- **Name:** Enter a suitable name for the SIP account.
- **User ID:** Enter the SIP user number configured in **Section 6.2**.
- **Password:** Enter the password for the SIP user created in **Section 6.2**.
- **Caller ID:** This should be the extension number created in **Section 6.2**.
- **Domain Name:** The Session Manager SIP domain.
- **Registrar address:** The IP address of the Session Manager.

The screenshot shows a web browser window titled "AXIS A8105-E Network Video Door Station - Google Chrome". The address bar displays "10.10.16.129/admin/account\_set.shtml?doAction=add". The page has a blue header with the title "Add Account" and a help icon. Below the title are three tabs: "General", "Network", and "Video", with "General" being the active tab. The form is divided into three main sections: "Account Information", "Account Credentials", and "SIP Server Settings".

**Account Information**

Name:

☒ Default account (Note that only one account can be the default account.)

**Account Credentials**

User ID:

☒ Use User ID as Authentication ID

Authentication ID:

## 7.3. Configure DTMF Settings

Tick the required way in which DTMF will be sent. **SIP INFO** packets or as specially marked events in the RTP stream using **RFC 2833**.

The screenshot displays the web interface for the AXIS A8105-E Network Video Door Station. The top navigation bar includes the AXIS logo, the device name, and links for Live View, Setup, and Help. A left sidebar contains a menu with options like Basic Setup, Video & Audio, VoIP, Live View Config, Detectors, Applications, Events, Recordings, Languages, System Options, and About. The main content area is titled 'DTMF Settings' and features a sub-header 'DTMF Configuration for SIP Accounts'. Under this, there is a section for 'Peer-to-peer accounts (No local accounts)' with two checked options: 'DTMF using SIP INFO (RFC2976)' and 'DTMF using RTP (RFC2833)'. Below these is a table titled 'Associated DTMF Sequences' with columns for 'Name' and 'Sequence'. The table is currently empty. At the bottom of the settings area, there is a button labeled '8275060 (8275060)' with an edit icon.

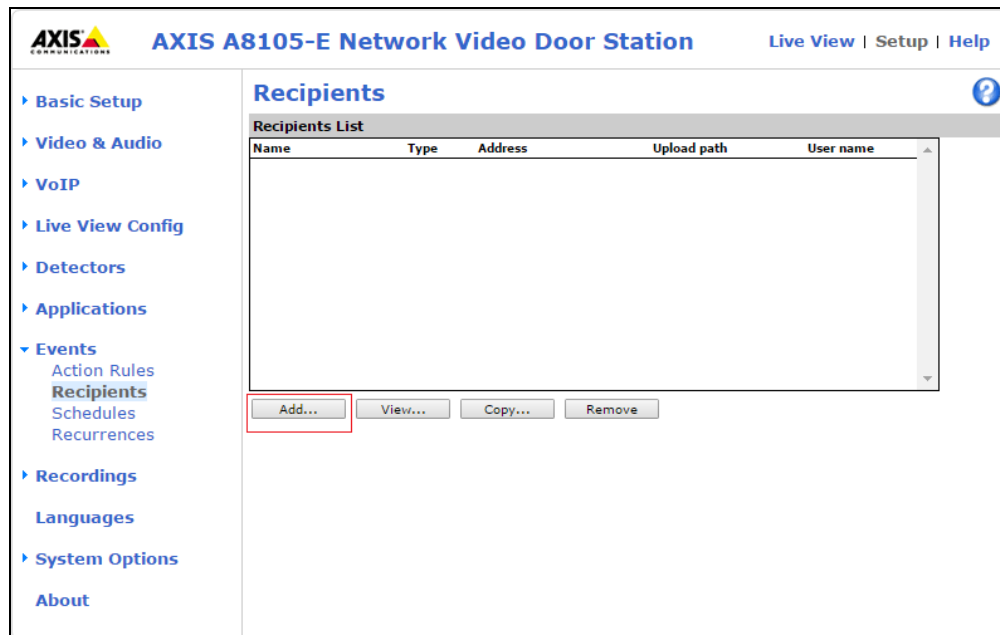

Name	Sequence
------	----------

## 7.4. Configure Events

In order to create an event both a recipient and an action rule must be created. A recipient is created before an action rule.

### 7.4.1. Add a new recipient

Click on **Events** → **Recipients** in the left window and in the main window, click on **Add**.

Enter a suitable **Name** for the **Recipient** and ensure that **Type** is set to **SIP**. The **From** and **To** must be chosen. The **From SIP account** should be that created in **Section 6.2**. The **To SIP address** will be the Communication Manager extension that is to be called. A **Test** can be done to verify the call to the extension before it is saved.

The 'Recipient Setup' dialog box is shown. It contains the following fields and controls:

- Name:** Text field with 'MainReception' entered.
- Type:** Dropdown menu with 'SIP' selected.
- From SIP account:** Dropdown menu with '8275060 (8275060)' selected.
- To SIP address:** Text field with 'sip:8270000@10.10.16.77' entered.
- Test:** Section with a description: 'Test the connection between the selected SIP account and the specified SIP address. The call will end automatically.'
- Select SIP account:** Dropdown menu with '8275060 (8275060)' selected, next to a 'Test' button.
- Buttons:** 'OK' and 'Cancel' buttons at the bottom.

A number of different recipients are normal for such a test, where various Communication manager endpoints can be called, or perhaps a number of hunt groups.

The screenshot shows the web interface for the AXIS A8105-E Network Video Door Station. The left sidebar contains a menu with options: Basic Setup, Video & Audio, VoIP, Live View Config, Detectors, Applications, Events (with sub-items: Action Rules, Recipients, Schedules, Recurrences), Recordings, Languages, System Options, and About. The 'Recipients' option is selected. The main area is titled 'Recipients' and contains a table with the following data:

Name	Type	Address	Upload path	User name
8270001	SIP	sip:8270001@10.10.16.77	-	-
8275000	SIP	sip:8275000@10.10.16.77	-	-

Below the table are buttons for 'Add...', 'View...', 'Copy...', and 'Remove'.

## 7.4.2. Modify Action Rule

An action rule can now be modified to include the participant created in **Section 7.4.1**. Under **Events** in the left window click on **Action Rules** and in the main window select the **BUTTON: Make Call** rule and click **Modify** as shown below.

The screenshot shows the web interface for the AXIS A8105-E Network Video Door Station. The left sidebar is the same as in the previous screenshot, but the 'Action Rules' option under 'Events' is selected. The main area is titled 'Action Rules' and contains a table with the following data:

Name	Trigger	Schedule	Action	Recipient
<input checked="" type="checkbox"/> AUDIO: Calling	Call - State	-	Play Audio Clip	-
<input checked="" type="checkbox"/> AUDIO: Stop on Active call	Call - State	-	Stop Audio Clip	-
<input checked="" type="checkbox"/> AUDIO: Stop on Idle call	Call - State	-	Stop Audio Clip	-
<input checked="" type="checkbox"/> <b>BUTTON: Make Call</b>	Input Signal - Digital Input Port	-	Make Call	8270001
<input checked="" type="checkbox"/> BUTTON: VMS call	Input Signal - Digital Input Port	-	Make Call	VMS
<input checked="" type="checkbox"/> LIGHT: Active call	Call - State	-	Activate Light	-
<input checked="" type="checkbox"/> LIGHT: Calling	Call - State	-	Activate Light	-
<input checked="" type="checkbox"/> LIGHT: Idle	Call - State	-	Activate Light	-
<input checked="" type="checkbox"/> TAMPERING: Shock	Detectors - Shock	-	Output Port	-

Below the table are buttons for 'Add...', 'Copy...', 'Modify...', and 'Remove'.

The **General** section displays what is shown by default, and if not change it to what is displayed below or to what condition is required. Under the **Actions** section the **Type** is set to **Make Call** and the **Recipient** is set to that recipient created in **Section 7.4.1**. This will ensure that when the button is pressed a call is made to the recipient. Click on **OK** to save the configuration.

## 8. Verification Steps

Pressing the Axis door phone button and answering the call from the Communication Manager set and ensuring there is two-way speech and video (where possible) is the ultimate verification that the product works and is connected and configured correctly. The steps below can also be taken to ensure that the Axis door phone is registered correctly with Session Manager and some monitoring tips to see that this is the case.

### 8.1. Verify Registration to Avaya Aura® Session Manager

From the System Manager dashboard select **Session Manager** from the **Elements** section (not shown). From the left hand menu select **System Status**→**User Registrations** (not shown). The 8105-E Video Station is listed and a tick under **Registered** for the Session Manager it is registered to.

The screenshot displays the Avaya Aura System Manager 7.0 interface. The top navigation bar includes the Avaya logo, 'Aura® System Manager 7.0', and a 'Log off admin' button. The left sidebar contains a menu with 'Session Manager' selected, showing sub-items like Dashboard, Session Manager Administration, Communication Profile Editor, Network Configuration, Device and Location Configuration, and Application Configuration. The main content area is titled 'User Registrations' and includes a breadcrumb trail: Home / Elements / Session Manager / System Status / User Registrations. Below the title, there are controls for viewing (Default, Force Unregister), notifications (Reboot, Reload, Failback), and a timestamp (As of 11:46 AM). A table lists 24 items, with the first row showing a device with IP 10.10.16.129 and a checked 'Prim' status under the Registered column.

View	Default	Force Unregister	AST Device Notifications:	Reboot	Reload	Failback	As of 11:46 AM	Advanced Search		
24 Items	Show	15						Filter: Enable		
Details	Address	First Name	Last Name	Actual Location	IP Address	Remote Office	Shared Control	Simult. Devices	AST Device	Registered
<input type="checkbox"/>	<a href="#">Show</a>	8275060@devconnect.local	Video	Station	---	10.10.16.129	<input type="checkbox"/>	<input type="checkbox"/>	1/1	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<a href="#">Show</a>	---	H175	Station	---	---	<input type="checkbox"/>	<input type="checkbox"/>	0/1	<input type="checkbox"/>

## 8.2. Verify Registration from AXIS A8105-E Network Video Door Station

Log in to the door phone as per **Section 7**. Navigate to **VoIP → Account Settings** in the left window and the registration information is displayed in the main window as shown below. The green lights show a successful registration of 8275060. Test call can be made from each account to a specific phone number using the **Test SIP Call** at the bottom of the screen.

The screenshot displays the web interface of the AXIS A8105-E Network Video Door Station. The top navigation bar includes the AXIS logo, the product name, and links for Live View, Setup, and Help. The left sidebar contains a menu with categories like Basic Setup, Video & Audio, VoIP, Live View Config, Detectors, Applications, Events, Recordings, Languages, System Options, and About. The 'VoIP' category is expanded, showing sub-items: Overview, SIP Settings, VMS Settings, Account Settings (highlighted), and DTMF Settings. The main content area is titled 'Account Settings' and features a table with the following data:

Name	SIP address	Transport	Default	Reg. status
8275060 (8275060)	8275060 <sip:8275060@devconnect.io cal>	UDP	✓	●

Below the table are buttons for 'Add...', 'Modify...', and 'Remove'. A 'Test SIP Call' section follows, with instructions to 'Make a test call from the selected SIP account to the specified SIP address.' It includes a text input field labeled 'Enter SIP address: sip(s):extension@domain' and a 'Test call' button.

If there is an issue with a call from the Axis door phone then there are logs that can be accessed that may show some further information for the issue. Navigate to **System Options** → **Support** → **Logs & Reports** in the left window and from the main window select **View Server Report** under the **Reports** section.

The screenshot shows the web interface for the AXIS A8105-E Network Video Door Station. The top header includes the AXIS logo, the product name 'AXIS A8105-E Network Video Door Station', and links for 'Live View', 'Setup', and 'Help'. On the left is a navigation menu with categories like Basic Setup, Video & Audio, VoIP, Live View Config, Detectors, Applications, Events, Recordings, Languages, System Options (expanded), and About. The 'System Options' menu is expanded, showing Security, Date & Time, Network, Storage, Ports & Devices, Maintenance, Support (expanded), and Advanced. The 'Support' menu is further expanded, showing Support Overview, System Overview, Logs & Reports (selected), and Information. The main content area is titled 'Logs & Reports' and contains a help icon, a note about log files, a warning about connection speed, and sections for Logs and Reports. The Logs section has buttons for System Log and Access Log. The Reports section has buttons for View Server Report, Download Server Report (with an option to include a snapshot from Live View), Parameter List, Connection List, and Crash Report. A link to the Axis Privacy statement is also present.

## 9. Conclusion

These Application Notes describe the configuration steps for provisioning the AXIS A8105-E Network Video Door Station from Axis Communications AB to interoperate with Avaya Aura® Communication Manager R7.0.1 and Avaya Aura® Session Manager R7.0.1. Please refer to **Section 2.2** for test results and observations.

## 10. Additional References

This section references documentation relevant to these Application Notes. The Avaya product documentation is available at <http://support.avaya.com> where the following documents can be obtained.
