

Avaya Solution & Interoperability Test Lab

Application Notes for Etesalat Innovations Call Management Server with Avaya Communication Manager - Issue 1.0

Abstract

These Application Notes describe the configuration steps required for Etesalat Innovations Call Management Server to interoperate with Avaya Communication Manager.

Etesalat Innovations Call Management Server is a hospitality system that provides call accounting and real-time interface between Avaya Communication Manager and a hotel's Property Management System (PMS).

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the procedures for configuring Etesalat Innovations Call Management Server 3.0 to interoperate with Avaya Communication Manager 5.0. Etesalat Innovations Call Management Server is a hospitality system that provides call accounting and real-time interface between Avaya Communication Manager and a hotel's Property Management System (PMS). Call Management Server supports hospitality feature requests to/from a PMS such as guest room check-in/check-out, guest room swap/move, call restriction, Message Waiting Indicator (MWI) control and housekeeping status changes. The call accounting functionality is facilitated by a Call Detail Recording (CDR) interface to Avaya Communication Manager, while the Hospitality features are enabled by a PMS data link to Avaya Communication Manager.

Figure 1 illustrates the network configuration used to verify the Etesalat Innovations Call Management Server solution. Site A is comprised of a pair of Avaya S8720 Servers and Avaya G650 Media Gateway, and has connections to the following: Avaya 4600 and 9600 Series IP Telephones, Avaya 2400 Series Digital Telephones, and an ISDN-BRI trunk to the PSTN. Etesalat Innovations Call Management Server is installed on a server running Microsoft Windows Server 2003 with Service Pack 2. Site B is comprised of an Avaya S8300 Server with Avaya G350 Media Gateway, and has connections to an Avaya 4600 Series IP Telephone and an Avaya 2400 Series Digital Telephone. The Avaya C364T-PWR Converged Stackable Switch provides Ethernet connectivity to the servers and IP telephones and Layer 3 IP routing between the two sites. An H.323 IP trunk is configured between Site A and B for the users to call between the two sites.

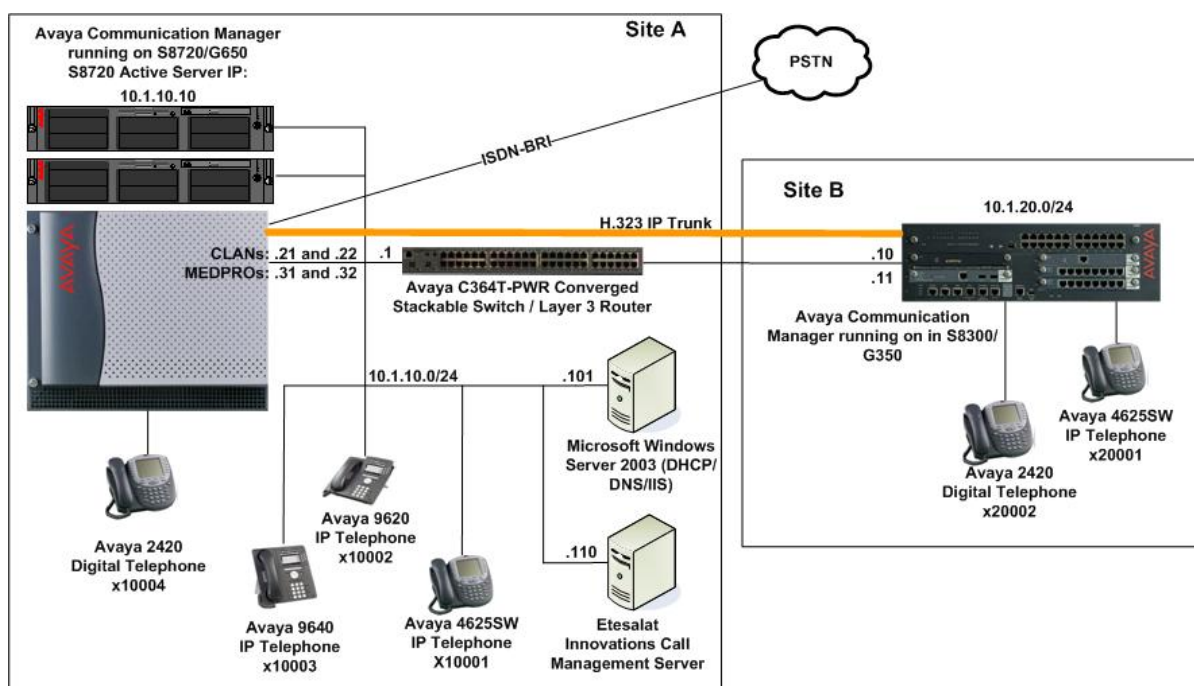

Figure 1: Test configuration

2. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment	Software
Avaya S8720 Servers	Avaya Communication Manager 5.0 (Service Pack 3 00.0.825.4- 15759)
Avaya G650 Media Gateway - TN2312BP IP Server Interface - TN799DP C-LAN Interface - TN2302AP IP Media Processor - TN2602AP IP Media Processor - TN2214CP Digital Line - TN2793B Analog Line	- HW07, FW043 HW01, FW026 HW20, FW117 HW02, FW034 HW08, FW015 000013
Avaya S8300 Server	Avaya Communication Manager 5.0 (Service Pack 3 00.0.825.4- 15759)
Avaya G350 Media Gateway	27.27.0
Avaya 4600 Series IP Telephones - 4625SW	2.8.8.7 (H.323)
Avaya 9600 Series IP Telephones - 9620 - 9640	1.5 (H.323) 1.5 (H.323)
Avaya 2400 Series Digital Telephone	-
Avaya C364T-PWR Converged Stackable Switch	4.5.18
Etesalat Innovations Call Management Server	3.0

3. Configure Avaya Communication Manager

3.1. Call Detail Recording Interface

This section provides the procedures for configuring Call Detail Recording (CDR) in Avaya Communication Manager. All configuration changes in Avaya Communication Manager are performed through the System Access Terminal (SAT). For this configuration, the CDR links are configured to originate from the IP addresses of the C-LAN board and terminates at the IP address of the Etesalat Innovations Call Management Server. These steps describe the procedure used for the Avaya S8720 Server only. The highlights in the following screens indicate the parameter values used during the compliance test.

Step	Description																																										
1.	<p>Use the change node-names ip command to add a new node name for the Etesalat Innovations Call Management Server.</p> <div><div>change node-names ip</div><div>Page1 of 1</div><table><tr><th colspan="2">IP NODE NAMES</th></tr><tr><th>Name</th><th>IP Address</th></tr><tr><td>default</td><td>0.0.0.0</td></tr><tr><td>CLAN-01A02</td><td>10.1.10.21</td></tr><tr><td>CLAN-01A11</td><td>10.1.10.22</td></tr><tr><td>MEDPRO-01A13</td><td>10.1.10.32</td></tr><tr><td>MEDPRO-01A14</td><td>10.1.10.31</td></tr><tr><td>EICMS</td><td>10.1.10.110</td></tr></table></div>	IP NODE NAMES		Name	IP Address	default	0.0.0.0	CLAN-01A02	10.1.10.21	CLAN-01A11	10.1.10.22	MEDPRO-01A13	10.1.10.32	MEDPRO-01A14	10.1.10.31	EICMS	10.1.10.110

3.2. PMS Data Link

This section provides the procedures for configuring the Property Management System (PMS) interface in Avaya Communication Manager. All configuration changes in Avaya Communication Manager are performed through the System Access Terminal (SAT). These steps describe the procedure used for the Avaya S8720 Server. For this configuration, the PMS Data Link is configured to originate from the IP addresses of the C-LAN board and terminates at the IP address of the Etesalat Innovations Call Management Server. The highlights in the following screens indicate the parameter values used during the compliance test.

Step	Description
1.	<p>Enter the change system-parameters hospitality command to configure the Hospitality features. The following settings were used during the compliance test.</p> <ul style="list-style-type: none"> • Message Waiting Configuration: act-pms • Controlled Restrictions Configuration: act-pms • Housekeeper Information Configuration: act-pms • PMS Endpoint: PMS • PMS Protocol Mode: transparent • ASCII mode: n • Seconds before PMS Link Idle Timeout: 20 • Milliseconds before PMS Link Acknowledgement Timeout: 500 <pre> change system-parameters hospitality Page 1 of 3 HOSPITALITY Message Waiting Configuration: act-pms Controlled Restrictions Configuration: act-pms Housekeeper Information Configuration: act-pms Number of Housekeeper ID Digits: 0 PMS Log Endpoint: Journal/Schedule Endpoint: Client Room Coverage Path Configuration: act-nopms Default Coverage Path for Client Rooms: Forward PMS Messages to Intuity Lodging? n PMS LINK PARAMETERS PMS Endpoint: PMS PMS Protocol Mode: transparent ASCII mode? n Seconds before PMS Link Idle Timeout: 20 Milliseconds before PMS Link Acknowledgement Timeout: 500 PMS Link Maximum Retransmissions: 3 PMS Link Maximum Retransmission Requests: 3 Take Down Link for Lost Messages? y </pre> <p>On Page 3 of the HOSPITALITY form, configure the definition for the Room States as shown below. The status defined here must match the status defined in the PMS.</p>

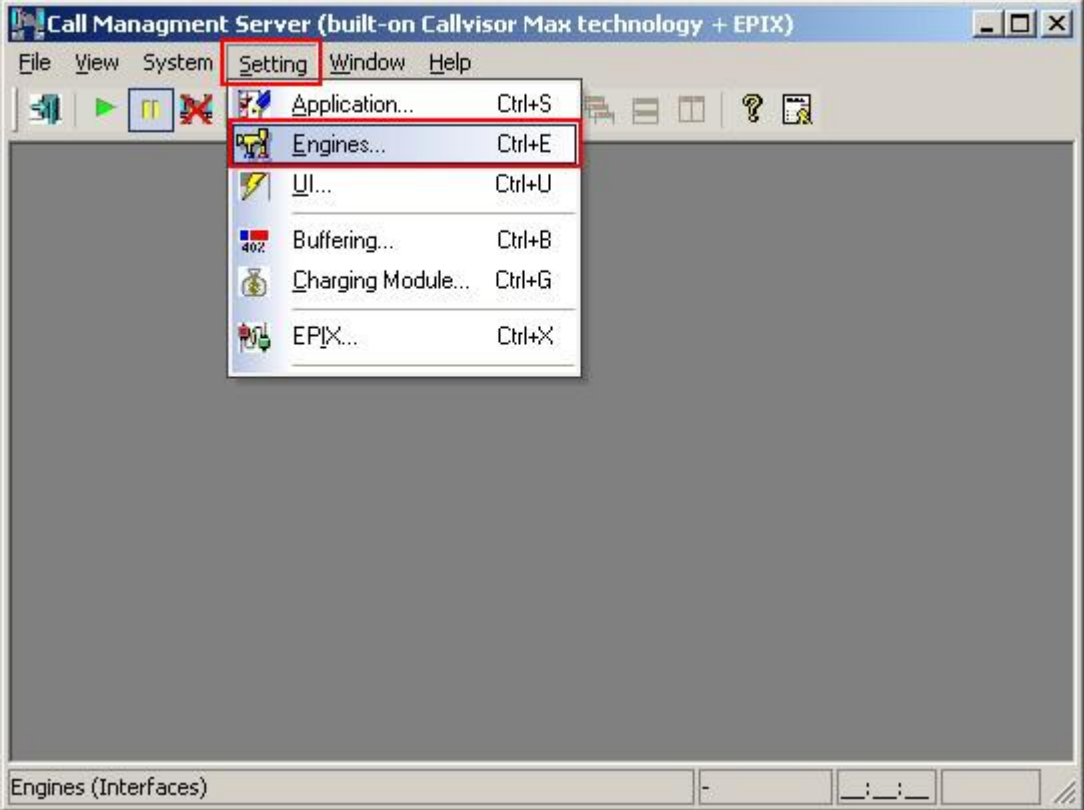

Step	Description
	<div> <div>change system-parameters hospitality</div> <div>ROOM STATESHOSPITALITY</div> <div>Page 3 of 3</div> <div> Definition for Rooms in State 1: Housekeeper in Room Definition for Rooms in State 2: Room Clean - Vacant Definition for Rooms in State 3: Room Clean - Occupied Definition for Rooms in State 4: Room Not Clean - Vacant Definition for Rooms in State 5: Room Not Clean - Occupied Definition for Rooms in State 6: Room Clean - Needs Inspection </div> <div>HOSPITALITY FEATURES</div> <div>Suite Check-in? n</div> <div>Cancel Do-Not-Disturb for Wakeup Calls? Y</div> </div>
2.	<div> Enter the change feature-access-codes command. On page 7 of the FEATURE ACCESS CODE (FAC) form, enter a unique FAC for each of the six Housekeeping Status (Client Room) Access Codes listed, which corresponds to the room status definition administered in Step 1. These FACs are dialed by the using the telephone in the Client Room to update the housekeeping status. At the same time, enter a unique FAC for each of the four Housekeeping Status (Station) Access Codes listed. These FACs are dialed from designated stations (e.g. phone in housekeeping department) to update the housekeeping status of a room. </div> <div> <div>change feature-access-codes</div> <div>FEATURE ACCESS CODE (FAC)</div> <div>Hospitality Features</div> <div>Page 7 of 8</div> <div> Automatic Wakeup Call Access Code: Housekeeping Status (Client Room) Access Code: *41 Housekeeping Status (Client Room) Access Code: *42 Housekeeping Status (Client Room) Access Code: *43 Housekeeping Status (Client Room) Access Code: *44 Housekeeping Status (Client Room) Access Code: *45 Housekeeping Status (Client Room) Access Code: *46 Housekeeping Status (Station) Access Code: *51 Housekeeping Status (Station) Access Code: *52 Housekeeping Status (Station) Access Code: *53 Housekeeping Status (Station) Access Code: *54 Verify Wakeup Announcement Access Code: Voice Do Not Disturb Access Code: </div> </div>

4. Configure Etesalat Innovations Call Management Server

This section details the steps required to configure Etesalat Innovations Call Management Server to interoperate with Avaya Communication Manager. These Application Notes assume that the Call Management Server application has already been properly installed by Etesalat Innovations personnel.

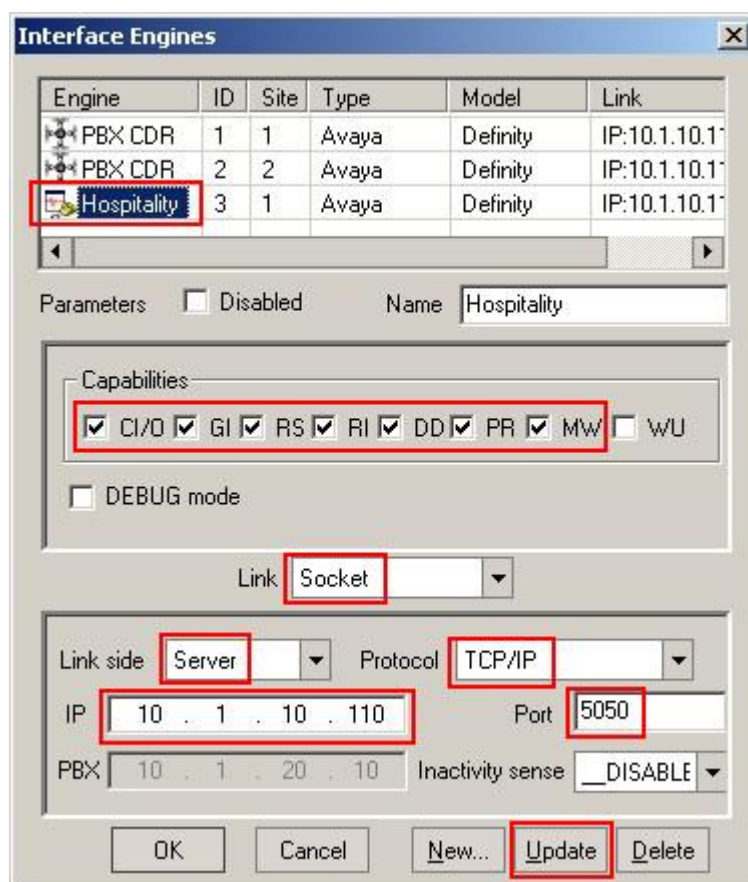

Step	Description
1.	<p>From the Call Management Server, click Start > All Programs > EtesalatSoft > Call Server > Call Management Server to launch the Call Management Server application.</p> <p>Click Setting > Engines to start the configuration.</p> 

Step	Description
2.	<p>At the Interface Engines window, click New.</p> 
3.	<p>At the New Engine window, select PBX CDR for Engine, Avaya for Type and Definity for Model to create the engine to collect CDR from the Avaya Communication Manager. Click OK.</p> 

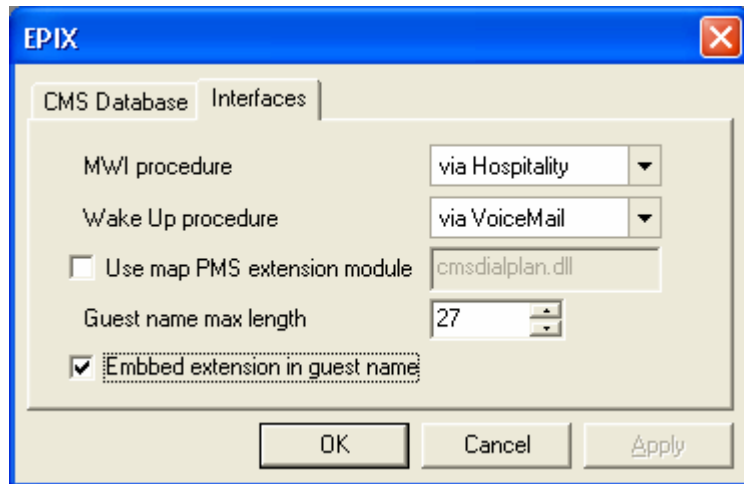

Step	Description
4.	<p>At the Interface Engines window, click on the PBX CDR engine created in Step 3 to configure it. In the Parameters section, set the fields 1, 2, 3, 14 and 15 to 1. To define the CDR link, the following settings are used. Click Update to save the settings.</p> <ul style="list-style-type: none"> • Link: Socket • Link side: Server • Protocol: Avaya Reliable • IP: The IP address of the Call Management Server. • Port: The port that Call Management Server listens on, and must match the Remote Port field configured in Section 3.1 Step 2. • PBX: The IP address of the C-LAN board configured in Section 3.1 Step 2. 

Step	Description
5.	<p>Repeat Steps 2 to 4 to create a second CDR engine for the Avaya Communication Manager system at Site B.</p> 
6.	<p>Repeat Steps 2 to create a new Hospitality engine for the Avaya Communication Manager systems. At the New Engine window, select Hospitality for Engine, Avaya for Type and Definity for Model to create the engine to interface with the Avaya Communication Manager PMS data link. Click OK.</p> 

Step	Description
7.	<p>At the Interface Engines window, click on the Hospitality engine created in Step 6 to configure it. In the Capabilities section, fields CI/O, GI, RS, RI, DD, PR and MW are checked for Avaya. To define the Hospitality engine, the following settings are used. Click Update to save the settings and click OK to close the Interface Engines window.</p> <ul style="list-style-type: none"> • Link: Socket • Link side: Server • Protocol: TCP/IP • IP: The IP address of the Call Management Server. • Port: The port that Call Management Server listens on, and must match the Remote Port field configured in Section 3.2 Step 3.

Step	Description
8.	<p>From Setting menu click EPIX... to configure hospitality features.</p> <ul style="list-style-type: none"> • MWI procedure: select via Hospitality. • Wake Up procedure: if there is a SoftVoice© Etesalat-innovations voicemail system, select via Voicemail, otherwise Not Supported. • Use map PMS extension module: when PMS Rooms numbers doesn't map directly to PBX extensions (as in the case i.e. Room has two or more extensions, while PMS only see the Room number), you need to activate a mapping module. • Guest name max length: Avaya PBX puts a restriction on guest name length, so Call Management Server will truncate guest name sent from PMS system to such length when submitting Check-In to PBX. • Embed extension in guest name: some integration devices i.e. VoiceBridge II needs extension of Phone set be embedded in the name.

5. Interoperability Compliance Testing

The interoperability compliance testing included feature and serviceability testing. The feature testing evaluated Etesalat Innovations Call Management Server's ability to collect and process CDR records and interoperate with Avaya Communication Manager's PMS features. The serviceability test introduced failure scenarios to see if Etesalat Innovations Call Management Server can resume operation after failure recovery.

5.1. General Test Approach

Feature functionality testing was performed manually. Inbound calls were made to the Avaya telephones (i.e. the guest telephones) over ISDN-BRI trunks, as well as from other local extensions (digital, and IP Telephone). A simulated PMS application from Etesalat Innovations was used to check-in, check-out and do room change for guest telephones, make changes to the telephone's calling privileges and MWIs, and receive room status updates initiated at guest and designated telephones. Intra-switch calls, inter-switch calls, inbound and outbound PSTN trunk calls to and from guest telephones were placed and the CDR records collected and processed by

Etesalat Innovations Call Management Server were verified for accuracy. For serviceability testing, the CDR links on Avaya Communication Managers were disabled and re-enabled and the Avaya S8720 and S8300 servers were also rebooted.

5.2. Test Results

All feature and serviceability tests passed.

6. Verification Steps

The following steps may be used to verify the configuration.

Step	Description
1.	<p>To verify that the PMS data link between Avaya Communication Manager and Etesalat Innovations Call Management Server is operational, enter status pms-link at the SAT and look for a status of up in the Physical Link State and Protocol State fields.</p> <pre> status pms-link PMS LINK STATUS Physical Link State: up Protocol State: up Maintenance Busy? no Data Base Swapping? No </pre>
2.	<p>To verify that the CDR data link between Avaya Communication Manager and Etesalat Innovations Call Management Server is operational, enter status cdr-link at the SAT and look for a status of up in the Link State field of the CDR link to Etesalat Innovations Call Management Server (in this example, the Primary link).</p> <pre> status cdr-link CDR LINK STATUS Primary Secondary Link State: up CDR not administered Date & Time: 2008/8 /20 17:41:32 0 /0 /0 0 :0 :0 Forward Seq. No: 0 0 Backward Seq. No: 0 0 CDR Buffer % Full: 0.00 0.00 Reason Code: OK </pre>
3.	<p>To verify the ability to check in a guest extension <i>x</i>, initiate a request from the associated Property Management System. At the Avaya Communication Manager SAT, enter status station <i>x</i> and verify that Room Status is occupied and User Cntrl Restr is none.</p>

Step	Description
	<div>status station 1401 Page 1 of 6</div> <div>GENERAL STATUS</div> <div> Administered Type: 4625 Service State: in-service/on-hook Connected Type: 4625 TCP Signal Status: connected Extension: 1401 Port: S00062 Parameter Download: complete Call Parked? no SAC Activated? no Ring Cut Off Act? no Active Coverage Option: 1 </div> <div> EC500 Status: N/A Off-PBX Service State: N/A Message Waiting: Connected Ports: </div> <div> Limit Incoming Calls? no User Cntrl Restr: none Group Cntrl Restr: none </div> <div>HOSPITALITY STATUS</div> <div> Awaken at: User DND: not activated Group DND: not activated Room Status: occupied </div>

7. Support

Technical support for Etesalat Innovations Call Management Server can be obtained by sending an email to support@etesalat-innovations.com.

8. Conclusion

These Application Notes describe the procedures for configuring Etesalat Innovations Call Management Server to interoperate with Avaya Communication Manager. All interoperability compliance test cases executed against such a configuration were completed successfully.
