

Avaya Solution & Interoperability Test Lab

Application Notes for Initiative Software synTelate with Avaya Proactive Contact and Avaya PG230 Gateway - Issue 1.0

Abstract

These Application Notes describe the configuration steps required for Initiative Software synTelate to successfully interoperate with Avaya Proactive Contact 3.0.1 (PC3) and Avaya PG230 Gateway. synTelate is a call centre scripting application for creating inbound and outbound campaigns and consists of the synTelate Designer and the synTelate Agent. synTelate Agent 3.0 was compliance tested against Avaya PC3 with Avaya PG230 Gateway.

Information in these Application Notes has been obtained through interoperability compliance testing and additional technical discussions. Testing was conducted via the *DeveloperConnection* Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe a compliance tested configuration comprised of Avaya PC3 with Avaya PG230 Gateway, and Initiative Software synTelate 3.0.

synTelate is a call centre scripting application for creating inbound and outbound campaigns, and consists of the synTelate Designer and the synTelate Agent. synTelate Agent 3.0 was compliance tested against Avaya PC3 with Avaya PG230 Gateway. In the configuration described in these Application Notes, synTelate uses the Avaya PC3 Agent API to communicate with Avaya PC3. synTelate Designer is a graphical tool that is used for the definition of the call flow and agent screens. The synTelate database consists of client records that are used during inbound and outbound campaigns. The Avaya PC3 call list is mapped to the synTelate database.

Proactive Agent Blending (PAB) focuses on outbound calls and releases agents, when an inbound call enters the monitored hunt group queue on Avaya Communication Manager. PAB is achieved with Computer Telephony Interface (CTI). A Telephony Server Application Programming Interface (TSAPI) link is configured between Avaya PC3 and Avaya Application Enablement Services (AES). The two modes that were tested during compliance testing were proactive outbound dialing and proactive agent blending. The TSAPI link is used with the Proactive Agent Blending feature on Avaya PC3 to allow agents to handle both inbound and outbound calls. synTelate agent interfaces to Avaya PC3 via the Avaya PC3 Agent API DLL. The Avaya PC3 Agent API defines a set of messages exchanged between the synTelate agent application and the Avaya PC3 server over a TCP/IP socket connection to control the agent's work session. This allows synTelate to perform operations such as logging in and out the agent, joining a job, changing the agent state, handling calls and setting completion codes. When Avaya PC3 gives control over to the Avaya Communication Manager during Blending for inbound calls (synTelate agent switches to Inbound) the Agent API does not provide notification of incoming calls. Therefore, synTelate used a TSAPI link to the AES to receive inbound call events and to control the call (answer, hold, retrieve, hangup etc.) until the synTelate agent is switched back to outbound again. In the tested configuration, outbound, inbound, managed and blended jobs were supported by synTelate.

The configuration shown in Figure 1 consists of Avaya PC3 with an Avaya PG230 Gateway to make the outbound and transfer calls. The System Controller is a CPU (HP-C8000 processor), and runs the UNIX operating system. It executes the dialing application software PC3 which drives the entire system. The CPU is connected to the other components of the system via an Ethernet network connection. The Avaya PG230 Gateway places calls, performs call progress analysis, answers calls, connects calls to agents or hold queues, plays messages, and communicates with the System Controller. The Avaya PG230 Gateway is comprised of the Digital Switch Cardfile, the I/O Transition Module, and the switch power supplies.

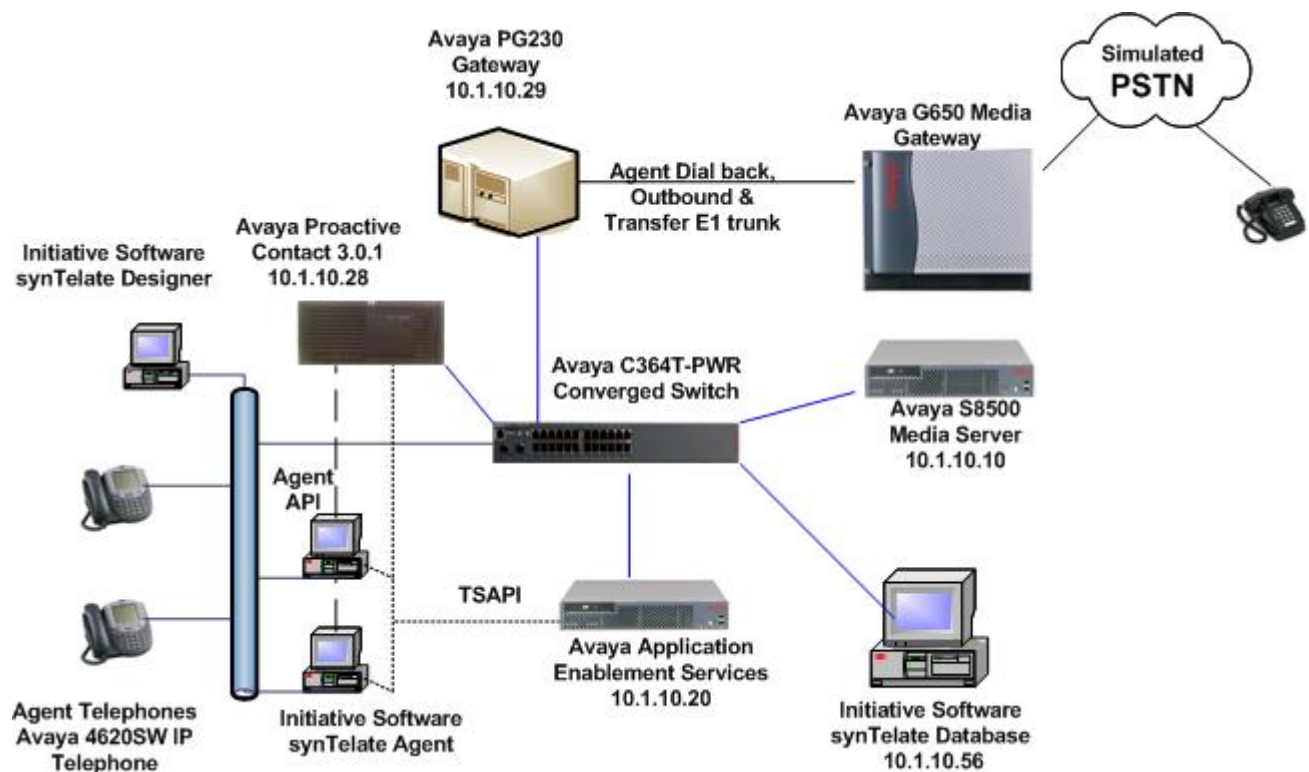

Figure 1: Avaya Proactive Contact 3.0.1 with Avaya PG230 Gateway and synTelate 3.0 Compliance Test Configuration

2. Equipment and Software Validated

The following equipment and software were used for the sample configuration.

Equipment	Software
Avaya Proactive Contact 3.0.1	3.0.1
Avaya PG230 Gateway Digital Switch power supply and card cage	15.3.1
Avaya PC3 Agent API	3.0.0.37
Avaya Application Enablement Services	3.1.2
Avaya S8500 Media Server running Avaya Communication Manager 3.0	3.1.2 (R013X.01.2.632.1)
Avaya G650 Media Gateway DS1 Interface TN2464BP	HW5 FW19
Avaya C364T-PWR Converged Stackable Switch	4.3.12
Avaya 4620SW IP Telephones	2.3
synTelate Agent and Designer running on Dell Workstation 370	3.0 Windows XP Professional, Service Pack 2
synTelate Database	Microsoft SQL 2000

3. Configure Avaya Proactive Contact 3.0

There are three possible system deployments of Avaya PC3:

- Avaya Proactive Contact with CTI
- Avaya Proactive Contact with Avaya PG230 Gateway
- Avaya Proactive Contact with the traditional system cabinet

The compliance testing was configured with Avaya Proactive Contact with Avaya PG230 Gateway. The PAB of Avaya PC3 integrates outbound calling activities on Avaya PC3 with inbound calling activities on the contact centre functionality of Avaya Communication Manager. These Application Notes assume that Avaya PC3 and Avaya PG230 Gateway are configured and operational for outbound, blended and managed jobs. The following features should have already been configured on Avaya PC3. For all other provisioning information, please refer to Avaya Communication Manager product documentation in Section 11.

- Proactive Agent Blending
- Completion Codes
- Agent Owned Recall
- Recall/Callback
- Agent Playable Message
- Autowrap
- Job Linking
- Shadow Jobs
- Native Voice and Data Transfer (Supervised Transfer)

3.1. Calling List Fields Configuration Files

The calling list contains the customer records. The calling list fields are configured in the list configuration files (i.e., list5.fdict), located in the /opt/avaya/pds/lists folder on the Avaya PC3 server. The following highlighted fields were mapped to the synTelate fields in Section 6.1, Step 9.

4. Configure Avaya Communication Manager

The following steps provide an overview of the configuration of the DS1 trunks and contact centre functionality needed on Avaya Communication Manager to support PAB feature for Avaya PC3. It is assumed that the basic configuration of Avaya Communication Manager has been properly configured and is operational. For more information, please refer to Avaya Communication Manager product documentation in Section 11.

4.1. Configure DS1 Trunks

An E1 QSIG trunk for agent dial back, outbound and transfer calls was configured between Avaya Communication Manager and Avaya PG230 Gateway. The physical link was between Avaya PG230 Gateway and the Avaya G650 Gateway as shown in Figure 1.

Step	Description
1.	<p>Enter the add ds1 n command, where n is an unused board location number. Configure the following on Page 1 of the DS1 CIRCUIT PACK screen.</p> <ul style="list-style-type: none">• Name – enter a descriptive name.• Line Coding – set to “hdb3”.• Signaling Mode – set to “isdn-pri”.• Connect – set to “pbx”.• Interface – set to “peer-master”.• Peer Protocol – set to “Q-SIG”. <div><pre>add ds1 01A08 Page 1 of 1 DS1 CIRCUIT PACK Location: 01A08 Name: PC3 trunk Bit Rate: 2.048 Line Coding: hdb3 Signaling Mode: isdn-pri Connect: pbx Interface: peer-master TN-C7 Long Timers? n Peer Protocol: Q-SIG Interworking Message: PROgress Side: a Interface Companding: alaw CRC? n Idle Code: 01010100 Channel Numbering: timeslot DCP/Analog Bearer Capability: 3.1kHz T303 Timer(sec): 4 Slip Detection? y Near-end CSU Type: other</pre></div>

2.	<p>Enter the add trunk-group n command, where n is an available trunk group number. Configure the following, on Page 1 of the TRUNK GROUP screen.</p> <ul style="list-style-type: none"> • Group Type – set to “isdn”. • Group Name – enter a meaningful name. • TAC – enter a Trunk Access Code that is valid under the provisioned dial plan. • Carrier Medium – set to “PRI/BRI”. • Service Type – set to “tie”. <div data-bbox="284 531 1430 831"> <pre> add trunk-group 46 Page 1 of 21 TRUNK GROUP Group Number: 46 Group Type: isdn CDR Reports: y Group Name: PC3 trunk COR: 1 TN: 1 TAC: 746 Direction: two-way Outgoing Display? n Carrier Medium: PRI/BRI Dial Access? y Busy Threshold: 255 Night Service: Queue Length: 0 Service Type: tie Auth Code? n TestCall ITC: rest Far End Test Line No: TestCall BCC: 4 </pre> </div>
3.	<p>On the Page 2 of the TRUNK GROUP screen, set the Supplementary Service Protocol to “b”, and the Disconnect Supervision – In to “y” and Out to “y”.</p> <div data-bbox="284 968 1430 1375"> <pre> add trunk-group 46 Page 2 of 21 Group Type: isdn TRUNK PARAMETERS Codeset to Send Display: 6 Codeset to Send National IEs: 6 Max Message Size to Send: 260 Charge Advice: none Supplementary Service Protocol: b Digit Handling (in/out): enbloc/enbloc Trunk Hunt: cyclical QSIG Value-Added? n Digital Loss Group: 13 Incoming Calling Number - Delete: Insert: Format: Bit Rate: 1200 Synchronization: async Duplex: full Disconnect Supervision - In? y Out? y Answer Supervision Timeout: 0 </pre> </div>

4.	<p>Enter the add signaling-group n command, where n is an unused signalling group number. Configure the following, on Page 1 of the SIGNALING GROUP screen.</p> <ul style="list-style-type: none"> • Group Type – set to “isdn-pri”. • Primary D-Channel – enter the DS1 board number followed by 16. • Supplementary Service Protocol – set to “b”. <div data-bbox="297 453 1419 699"> <pre> add signaling-group 46 Page 1 of 1 SIGNALING GROUP Group Number: 46 Group Type: isdn-pri Associated Signaling? y Max number of NCA TSC: 0 Primary D-Channel: 01A0816 Max number of CA TSC: 0 Trunk Group for Channel Selection: 46 Trunk Group for NCA TSC: Supplementary Service Protocol: b X-Mobility/Wireless Type: NONE </pre> </div>
5.	<p>Enter the change trunk-group n command, where n is the trunk group number configured in Step 2. On Page 3 of the trunk-group form, configure the following:</p> <ul style="list-style-type: none"> • Port – enter the DS1 board number followed by the trunk member number. The number of ports configured should be coordinated with the number of trunks available to the Avaya PG230 gateway. • Sig Grp – enter the number of the signaling group configured in Step 4. <div data-bbox="310 1037 1406 1362"> <pre> change trunk-group 46 Page 5 of 21 TRUNK GROUP Administered Members (min/max): 1/30 GROUP MEMBER ASSIGNMENTS Total Administered Members: 30 Port Code Sfx Name Night Sig Grp 1: 01A0801 TN2464 2: 01A0802 TN2464 3: 01A0803 TN2464 4: 01A0804 TN2464 5: 01A0805 TN2464 6: 01A0806 TN2464 </pre> </div>

4.2. Configure Contact Centre Functionality for Proactive Agent Blend

In a Proactive Agent Blending system, agents log in to the Avaya Communication Manager contact centre and to Avaya PC3. Avaya PC3 via the CTI link monitors the activity on Avaya Communication Manager contact centre devices such as the inbound VDN and hunt groups, and uses this information to determine when to acquire agents for outbound calling and when to release the agents to handle inbound calls.

Step	Description
1.	<p>The screens in this section are from the System Access Terminal (SAT). Log in with the appropriate credentials. Verify that the Avaya Communication Manager license has proper permissions for features illustrated in these Application Notes. Enter the display system-parameters customer-options command. On the OPTIONAL FEATURES screen, verify that Computer Telephony Adjunct Links is set to “y” as shown below.</p> <pre> display system-parameters customer-options Page 3 of 11 OPTIONAL FEATURES Abbreviated Dialing Enhanced List? n Audible Message Waiting? n Access Security Gateway (ASG)? n Authorization Codes? n Analog Trunk Incoming Call ID? n Backup Cluster Automatic Takeover? n A/D Grp/Sys List Dialing Start at 01? n CAS Branch? n Answer Supervision by Call Classifier? y CAS Main? n ARS? y Change COR by FAC? n ARS/AAR Partitioning? y Computer Telephony Adjunct Links? y ARS/AAR Dialing without FAC? y Cvg Of Calls Redirected Off-net? n ASAI Link Core Capabilities? n DCS (Basic)? n ASAI Link Plus Capabilities? n DCS Call Coverage? n Async. 2.	<p>On Page 6, in the CALL CENTER OPTIONAL FEATURES screen of the system-parameters customer options, verify the following bolded options are set to “y” as shown below.</p> <pre> display system-parameters customer-options Page 6 of 11 CALL CENTER OPTIONAL FEATURES Call Center Release: 3.0 ACD? y Reason Codes? n BCMS (Basic)? n Service Level Maximizer? n BCMS/VuStats Service Level? n Service Observing (Basic)? y BSR Local Treatment for IP & ISDN? n Service Observing (Remote/By FAC)? y Business Advocate? n Service Observing (VDNs)? y Call Work Codes? n Timed ACW? n DTMF Feedback Signals For VRU? n Vectoring (Basic)? y Dynamic Advocate? n Vectoring (Prompting)? y Expert Agent Selection (EAS)? y Vectoring (G3V4 Enhanced)? n EAS-PHD? n Vectoring (3.0 Enhanced)? n Forced ACD Calls? n Vectoring (ANI/II-Digits Routing)? n Least Occupied Agent? n Vectoring (G3V4 Advanced Routing)? n </pre>

3.

Enter the **add cti-link n** command, where **n** is an available CTI link number. Enter an available extension number in the **Extension** field. Set **Type** to “ADJ-IP” and enter a descriptive name in the **Name** field. **Note:** This step assumes that the administration of the connectivity between Avaya Communication Manager and Avaya Application Enablement Services is already established. This can be confirmed by entering the command **status aesvcs link**.

add cti-link 3

CTI LINK

Page 1 of 2

CTI Link: 3

Extension: 13000

Type: ADJ-IP

Name: TSAPI link 3

COR: 1

4.

Below is a table of the VDN extensions, vector numbers, hunt groups and agent login extensions configured for the Proactive campaign during compliance testing. The VDN named “PC3 Acquire-Out” is used by Avaya PC3 to acquire the synTelate agents for outbound calls. The VDN named “PC3 Inbound” is configured to route inbound calls to the synTelate agents.

VDN Name	PC3 Adjunct Route	PC3 Acquire-Out	PC3 Inbound
VDN	17100	17101	17102
Vector	100	101	102
Skill Ext/ Huntgroup		16101/101	16102/102
Agent Login		15101	15102

5.

Enter the **change vector n** command, where **n** is an unused vector number. This vector will be used by the CTI link configured in Step 3. The vector below is configured with an **adjunct routing link** step. The command running in this step turns control of the call over to Avaya PC3 to make outbound calls.

change vector 100

```

14. Repeat Step 13 for agent-loginID “15102”.

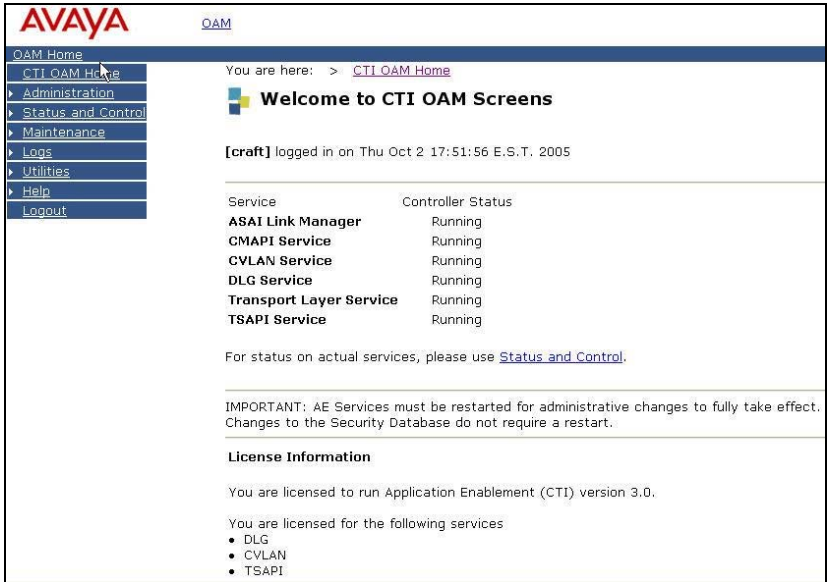

15. Extensions 10001 and 10002 were used as the agent physical telephone extensions during the compliance testing. It is assumed that stations are already administered on Avaya Communication Manager. The following buttons were assigned to each phone as shown below. Enter the **change station n** where “n” is the agent phone extension. On page 3 of the STATION form, configure the following button assignments.

- **aux-work** – agent is logged on to the phone for outbound calls.
- **auto-in** – agent goes to auto-in to accept inbound calls.
- **after-call** –when the agent is in wrap up state after the call has ended.
- **release** – to drop the call.

5. Configure Avaya Application Enablement Services

This section provides the procedures for configuring Avaya Application Enablement Services. Basic configuration related to the switch connection between Avaya Communication Manager and Avaya Application Enablement Services is assumed.

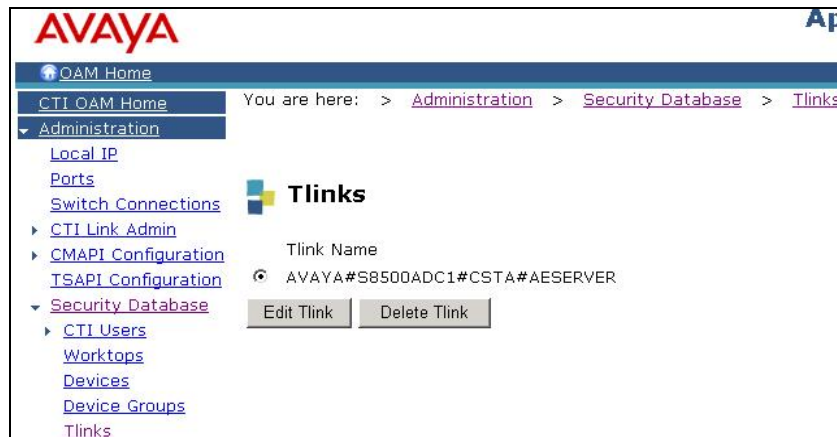

Step	Description
1.	<p>Access the AES Administration web interface, by entering <code>http://<ip-addr>:8443/MVAP</code> as the URL in an Internet browser, where <code><ip-addr></code> is the IP address of Avaya AES. Log in with the appropriate credentials to the Avaya AES Server OAM web interface (not shown) to verify that the Avaya AES license has proper permissions for features illustrated in these Application Notes. From the CTI OAM Home menu, select CTI OAM Admin and verify that the TSAPI service is licensed as shown below under the heading License Information.</p> 

2. From the CTI OAM Home menu, select **Administration** → **CTI Link Admin** → **TSAPI Links**. Click on **Add Link** (not shown). In the Add/ Edit TSAPI Links page shown below, configure the **Link**, **Switch Connection** and **Switch CTI Link Number**. Click on **Apply Changes**.

- **Link:** Choose a link number between 1 and 16 that is available.
- **Switch Connection:** Select the appropriate previously configured switch connection to be used, from the drop down list.
- **Switch CTI Link Number:** Corresponding CTI link number configured in Section 4.1 Step 3.

3. Navigate to the Tlinks screen by selecting **Administration** → **Security Database** → **Tlinks**. Note the value of the **Tlink Name**, as this will be needed by the synTelate Agent and Avaya PC3. The AES server automatically creates the Tlink Name shown below.

4. A user ID and password must be configured for the synTelate Agent application and for Avaya PC3 (not shown) to communicate as a TSAPI Client with the AES server. Click on **OAM Home** → **User Management** and log into the User Management pages (not shown). Click on **User Management** → **Add User**. In the **Add User** screen, configure the following fields, as shown below.

- **User Id:** Enter a login name to be used by synTelate agents.
- **Common Name:** A descriptive name.
- **Surname:** A descriptive name.
- **User Password:** Enter a password to be used by synTelate agents.
- **Confirm Password:** Re-enter the password.
- **Avaya Role:** Use the default value of “None”.
- **CT User:** Select “Yes” from the drop down list.

The screenshot displays the Avaya OAM 'Add User' interface. The top navigation bar includes the Avaya logo and 'OAM'. Below it, a breadcrumb trail shows 'You are here: > User Management > Add User'. The left sidebar contains a 'User Management' menu with options: List All Users, Add User, Search Users, Modify Default User, Change User Password, Service Management, Help, and Logout. The main form area is titled 'Add User' and contains the following fields:

- * User Id: synTelate
- * Common Name: synTelate Agent
- * Surname: SynTelate
- New Password: [text box]
- Confirm New Password: [text box]
- Admin Note: [text box]
- Avaya Role: None (dropdown menu)
- Business Category: [text box]
- Car License: [text box]
- CM Home: [text box]
- Css Home: [text box]
- CT User: Yes (dropdown menu)

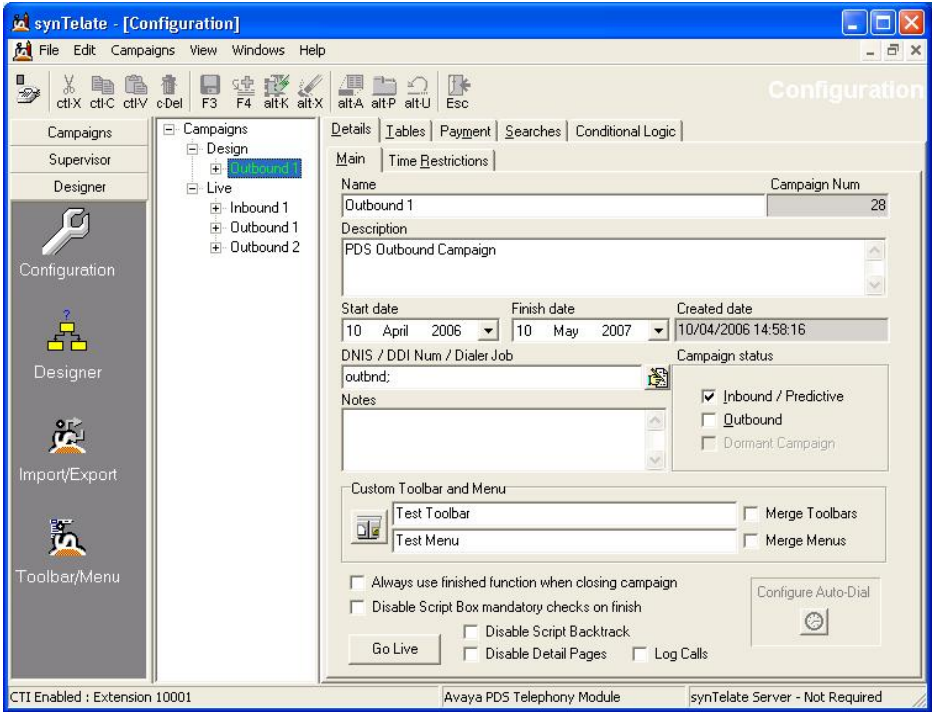

A note above the form states: 'Fields marked with * can not be empty.'

6. Configure synTelate

This section describes the steps for mapping the Avaya PC3 call list to synTelate database, synTelate CTI Configuration and the synTelate Agent configuration.

6.1. synTelate Database Field Mapping

The following steps describe the mapping of the Avaya PC3 call list to the synTelate database. The field mapping process describes the mapping of fields in the Avaya PC3 call list to corresponding fields in the synTelate database.

Step	Description
1.	<p>From the synTelate Designer workstation, select Start Menu → Programs → synTelate → synTelate Designer. In the left panel, click on the Designer tab and from the Designer panel select Configuration.</p> <p>Simple outbound and inbound campaigns were pre-configured as part of the compliance testing. Refer to Section 11 for synTelate documentation on configuring campaigns. Click Campaigns → Design. Highlight the design version of the outbound campaign “Outbound 1”.</p> 

2. From the synTelate taskbar, select **Campaigns → Plug-ins → Avaya PC3 Configuration**.

3. In the Avaya PDS Config Login dialog box that appears, enter a preconfigured PC3 agent **User Name** and appropriate **Password**. Click **OK**.

4. The synTelate agent checks the moagent32.ini file located in C:WINDOWS to obtain the Avaya PC3 IP address and port number. The lines in the moagent32.ini file are shown below.

```
[logon]
servername = 10.1.10.28
servicename = agent
portnumber = 22700
headset =
```

5. Right click in the **PDS Job Name** list box and click the green **tick** (check) button.

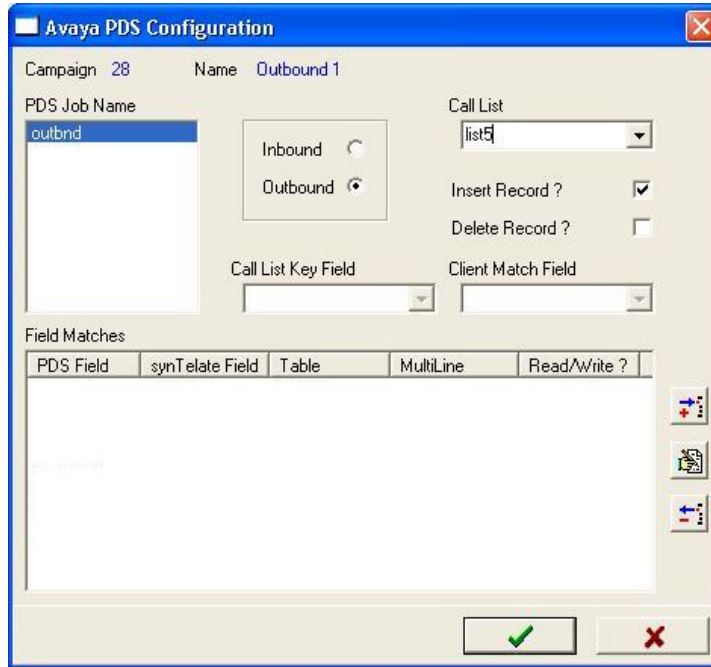

6. All the jobs retrieved from the Avaya PC3 are listed in the **Add Job for campaign** dialog box that appears. Select a relevant job for the outbound campaign.

7. Select the **Outbound** radio button. From the **Call list** drop down list, select “list5” and check the **Insert Record** box. The rest of the fields can be left with default values.

Click the  button to choose the Avaya PC3 fields that will be mapped with the synTelate database field names.

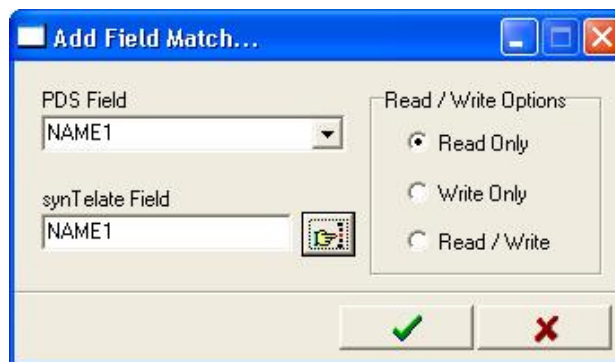

The 'Avaya PDS Configuration' dialog box shows the following settings:

- Campaign: 28
- Name: Outbound 1
- PDS Job Name: outbnd
- Call List: list5
- Radio buttons: Inbound (unselected), Outbound (selected)
- Insert Record?: ☒
- Delete Record?: ☐
- Call List Key Field: (empty)
- Client Match Field: (empty)
- Field Matches table:

PDS Field	synTelate Field	Table	MultiLine	Read/Write ?

Buttons at the bottom:  and .

8. Select the Avaya PC3 field from the **PDS Field** drop down list. In the **synTelate Field** click the  button. From the dialog box that appears, select the corresponding synTelate field name to be mapped with the **PDS field** and click the green **tick** button. Select the appropriate Read / Write Options for the field and click the green **tick** button.

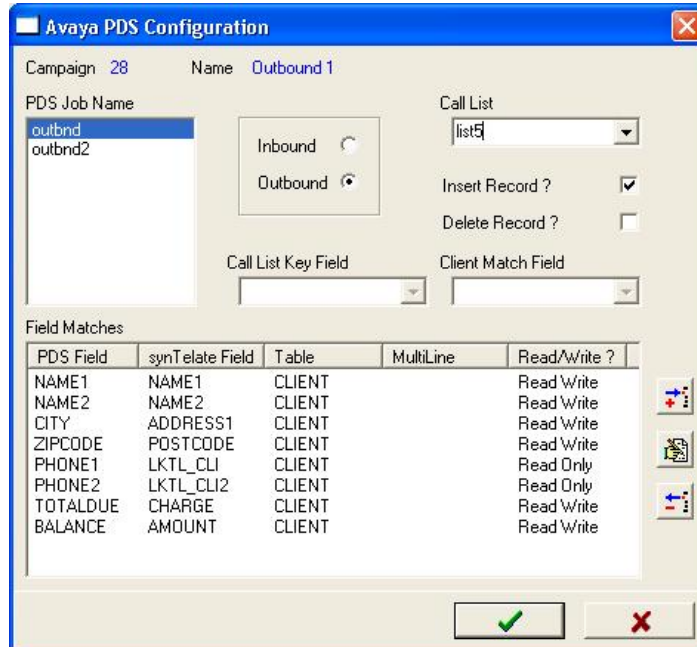

The 'Add Field Match...' dialog box shows the following settings:

- PDS Field: NAME1
- synTelate Field: NAME1
- Read / Write Options:
 - ☒ Read Only
 - ☐ Write Only
 - ☐ Read / Write

Buttons at the bottom:  and .

9. Repeat Steps 6 and 7 for each synTelate field name to be mapped with each relevant Avaya PC3 field listed in Section 3.1.

10. The figure below shows the complete list of synTelate fields mapped to the relevant Avaya PC3 fields for the Outbound campaign job. Click the green **tick** button.

The Avaya PDS Configuration dialog box is shown. It has a title bar with a close button. The main area contains the following fields:

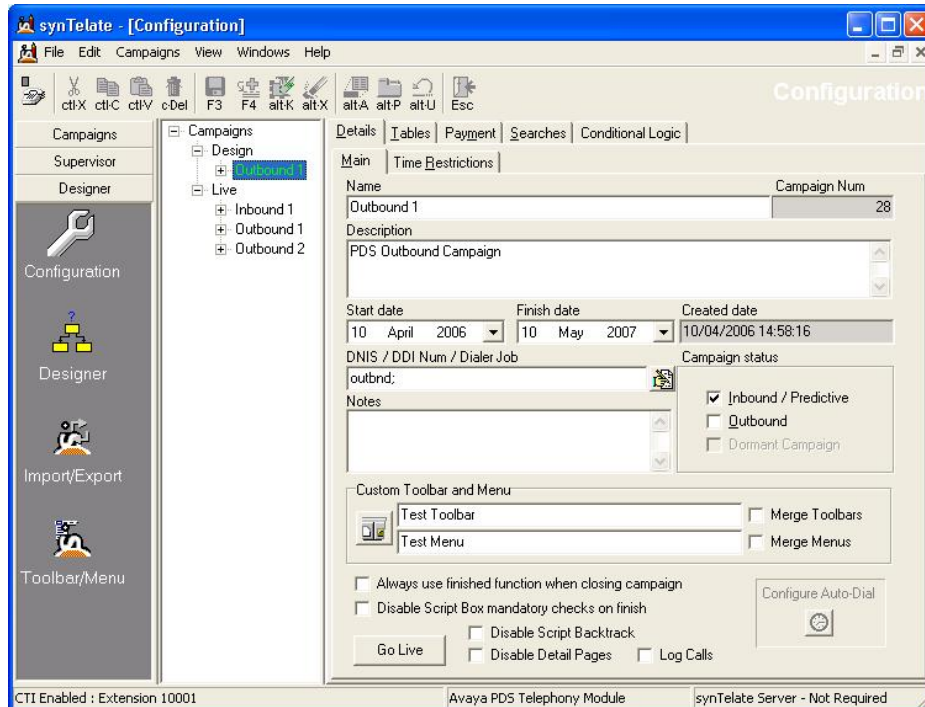

- Campaign: 28
- Name: Outbound 1
- PDS Job Name: outbnd, outbnd2
- Call List: list5
- Inbound: ☐
- Outbound: ☒
- Insert Record?: ☒
- Delete Record?: ☐
- Call List Key Field:
- Client Match Field:

Field Matches table:

PDS Field	synTelate Field	Table	MultiLine	Read/Write ?
NAME1	NAME1	CLIENT		Read/Write
NAME2	NAME2	CLIENT		Read/Write
CITY	ADDRESS1	CLIENT		Read/Write
ZIPCODE	POSTCODE	CLIENT		Read/Write
PHONE1	LKTL_CLI	CLIENT		Read Only
PHONE2	LKTL_CLI2	CLIENT		Read Only
TOTALDUE	CHARGE	CLIENT		Read/Write
BALANCE	AMOUNT	CLIENT		Read/Write

At the bottom right, there are two buttons: a green checkmark button and a red X button.

11. Click the **Go Live** button.

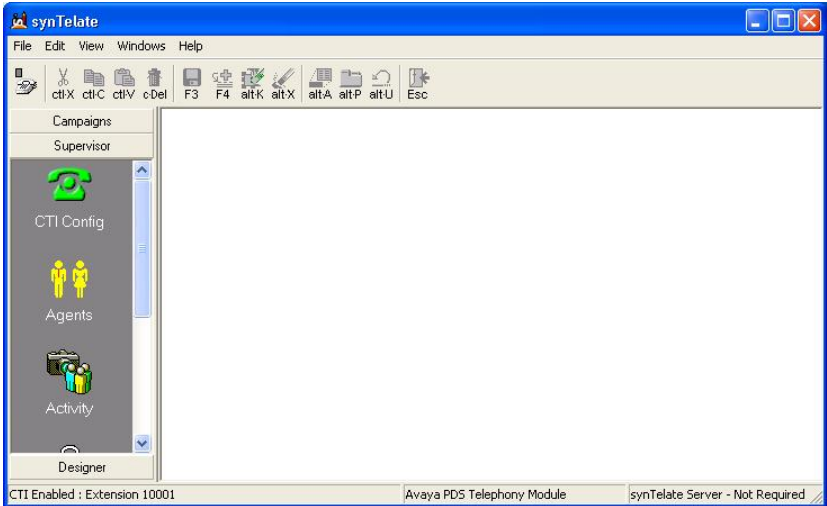

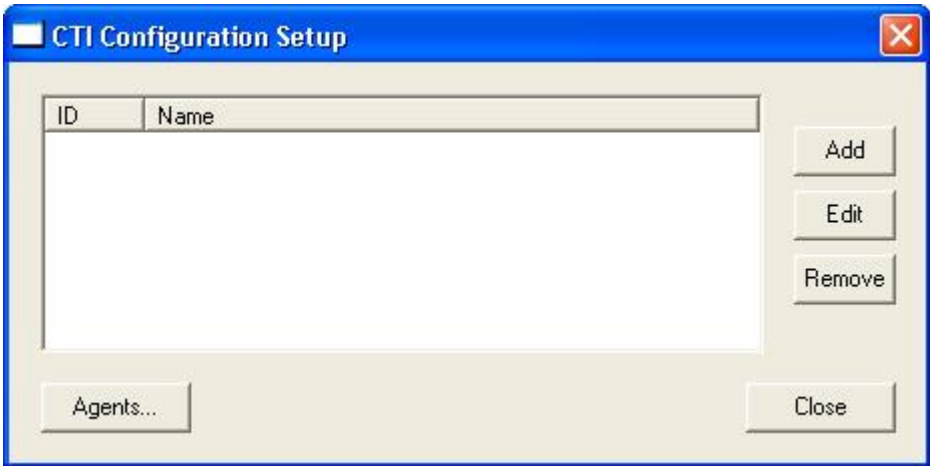

The synTelate - [Configuration] window is shown. It has a menu bar (File, Edit, Campaigns, View, Windows, Help) and a toolbar. The left sidebar contains icons for Campaigns, Supervisor, Designer, Import/Export, and Toolbar/Menu. The main area is divided into tabs: Details, Tables, Payment, Searches, Conditional Logic. The Details tab is active, showing the following information:

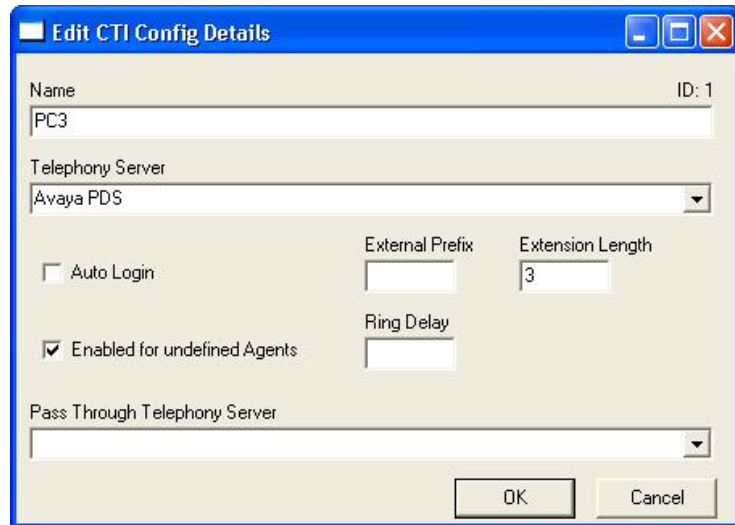

- Name: Outbound 1
- Campaign Num: 28
- Description: PDS Outbound Campaign
- Start date: 10 April 2006
- Finish date: 10 May 2007
- Created date: 10/04/2006 14:58:16
- DNIS / DDI Num / Dialer Job: outbnd;
- Notes:
- Campaign status: ☒ Inbound / Predictive, ☐ Outbound, ☐ Dormant Campaign
- Custom Toolbar and Menu: Test Toolbar, Test Menu, Merge Toolbars, Merge Menus
- Always use finished function when closing campaign: ☐
- Disable Script Box mandatory checks on finish: ☐
- Disable Script Backtrack: ☐
- Disable Detail Pages: ☐
- Log Calls: ☐

At the bottom left, there is a **Go Live** button. At the bottom right, there is a **Configure Auto-Dial** button. The status bar at the bottom shows: CTI Enabled : Extension 10001, Avaya PDS Telephony Module, synTelate Server - Not Required.

6.2. synTelate CTI Configuration

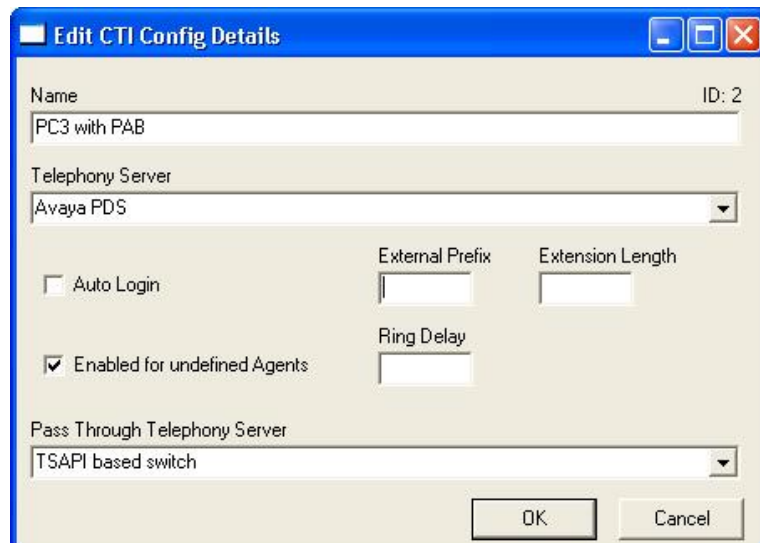

Step	Description
1.	<p>From the synTelate Designer workstation, select Start Menu → Programs → synTelate → synTelate Designer. In the left panel, click on the Supervisor tab. From the Supervisor panel, select CTI Config.</p> 
2.	<p>Click the Add button in the CTI Configuration Setup dialog box.</p> 

3. Enter a unique name for proactive outbound dialing in the **Name** field. The name will be listed in the selection during the agent login in Section 6.3, Step 1. Select “Avaya PDS” in the **Telephony Server** drop down list. Uncheck the **Auto Login** box. Enter external prefix and extension length if configured in Avaya Communication Manager. The rest of the values can be left as default. Click **OK**.

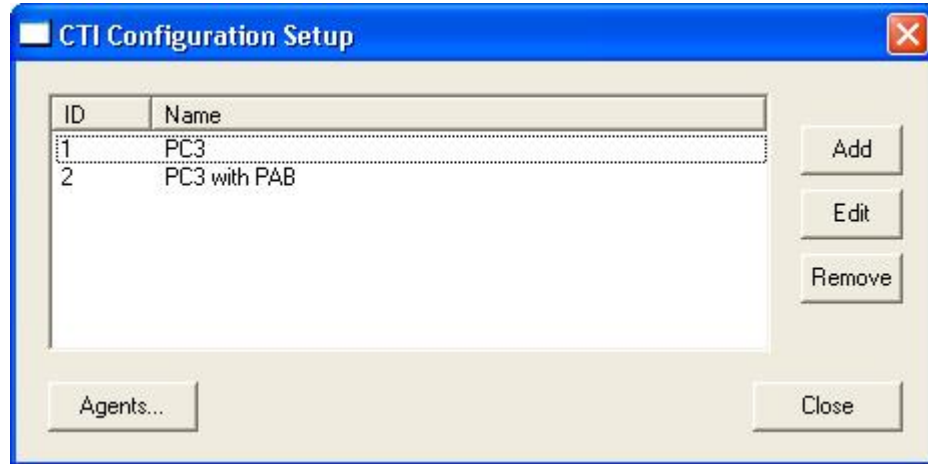

Dialog box titled "Edit CTI Config Details" (ID: 1). Fields include: Name (PC3), Telephony Server (Avaya PDS), Auto Login (unchecked), External Prefix (empty), Extension Length (3), Enabled for undefined Agents (checked), Ring Delay (empty), and Pass Through Telephony Server (empty). Buttons: OK, Cancel.

4. Repeat step 3, for proactive agent blending. Enter a unique name for proactive agent blending in the **Name** field. The name will be listed in the selection during the agent login in Section 6.3, Step 1. Select “Avaya PDS” in the **Telephony Server** drop down list. Uncheck the **Auto Login** box. Enter external prefix and extension length if configured in Avaya Communication Manager. The rest of the values can be left as default. In the **Pass Through Telephony Server** drop down list, select “TSAPI based switch”. Click **OK**.

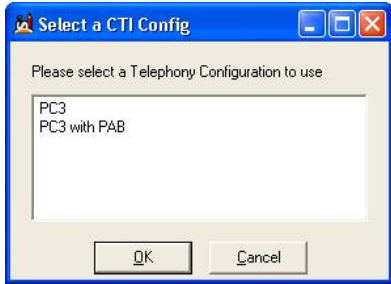

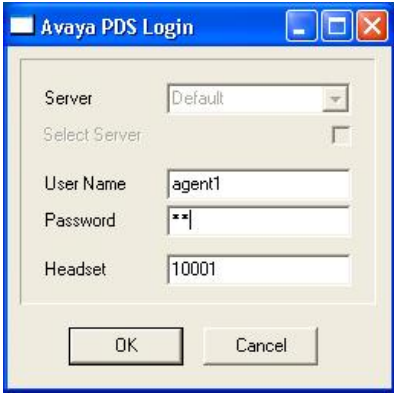

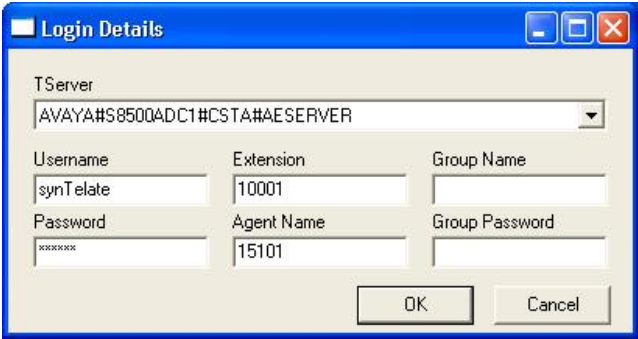

Dialog box titled "Edit CTI Config Details" (ID: 2). Fields include: Name (PC3 with PAB), Telephony Server (Avaya PDS), Auto Login (unchecked), External Prefix (empty), Extension Length (empty), Enabled for undefined Agents (checked), Ring Delay (empty), and Pass Through Telephony Server (TSAPI based switch). Buttons: OK, Cancel.

5. Click **Close** once all changes have been made.

6.3. synTelate Agent Application

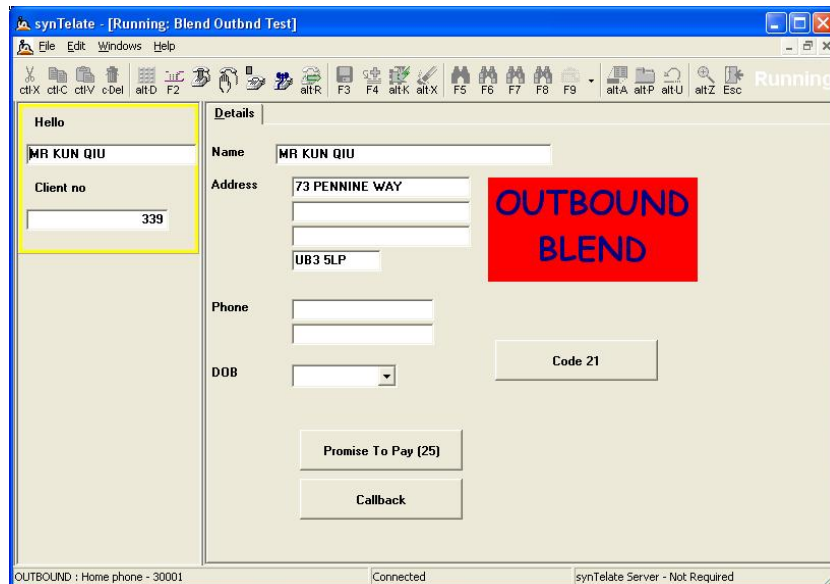

Step	Description
1.	<p>On the synTelate Agent PC, click on Start Menu → Programs → synTelate → synTelate Agent. Choose type of job. Click OK.</p> 

2.	<p>If PC3 (proactive outbound dialing) is chosen from the options in the screen above, the dialog box below appears. Enter the agent details configured on Avaya PC3, enter the agent User Name and appropriate Password. In the Headset field, enter the extension configured in Section 4.2, Step 15. Click OK.</p>  <p>The 'Avaya PDS Login' dialog box contains the following fields: 'Server' (a dropdown menu set to 'Default'), 'Select Server' (a checkbox), 'User Name' (text box with 'agent1'), 'Password' (text box with masked characters), and 'Headset' (text box with '10001'). At the bottom are 'OK' and 'Cancel' buttons.</p>
3.	<p>When logging in PC3 with PAB (Proactive Agent Blend mode), an additional login dialog for AES will appear as shown below. Select the Tlink shown in Section 5, Step 3. Enter Username and Password configured in Section 5, Step 4. Enter the Extension of agent telephone and agent login ID configured in Section 4.2, Step 13 in the Agent Name field. Click OK.</p>  <p>The 'Login Details' dialog box contains the following fields: 'TServer' (a dropdown menu with 'AVAYA#S850QADC1#CSTA#AESERVER'), 'Username' (text box with 'synTelate'), 'Extension' (text box with '10001'), 'Group Name' (text box), 'Password' (text box with masked characters), 'Agent Name' (text box with '15101'), and 'Group Password' (text box). At the bottom are 'OK' and 'Cancel' buttons.</p>
4.	<p>Click the telephone button icon on the toolbar as shown below and select Ready from the drop down menu that appears.</p>  <p>The image shows a toolbar with several icons. The telephone icon is highlighted, and a dropdown menu is open showing 'Ready' and 'Not Ready' options.</p>

5. Select job type and job name from the Campaign List dialog box. Click **OK**.

6. The following screen displays an example of a customer record for a campaign. Refer to Section 11 for synTelate documentation on configuring campaigns.

7. Interoperability Compliance Testing

The testing examined the synTelate Agent application interoperability with Avaya Proactive Contact 3.0.1 to handle both proactive outbound dialing and proactive agent blending. The majority of the testing focused on the ability of the synTelate Agent application to handle both inbound and outbound calls. Proactive Agent Blending made outbound calls and released agents to inbound only when inbound calls were made to the inbound VDN numbers configured.

7.1. General Test Approach

All feature test cases were performed manually to verify proper operation. The general test approach was to test the features on the synTelate agent that are supported with Avaya Proactive Contact 3.0.1.

- The following feature buttons on the synTelate agent were tested.
 - Login / Logout
 - Go Ready / Go Not Ready
 - Terminate Call
 - Release Call
 - Call Back
 - Agent Owned Recall
 - Play Message
 - Release Line
 - Hangup Line
 - Finish Item
 - Supervised Transfer (Native Voice Transfer)
 - Unsupervised Blind Transfer (Native Voice Transfer)
 - Cancel Supervised Transfer (Native Voice Transfer)
 - Hold/Unhold
 - Manual Call
 - Dial Digits
 - Transfer Call
- The following agent types were tested.
 - Outbound agent
 - Managed agent
 - Proactive agent blend
- Inbound calls to the synTelate agent were tested using the proactive agent blending feature of Avaya Proactive Contact 3.0.1.

7.2. Test Results

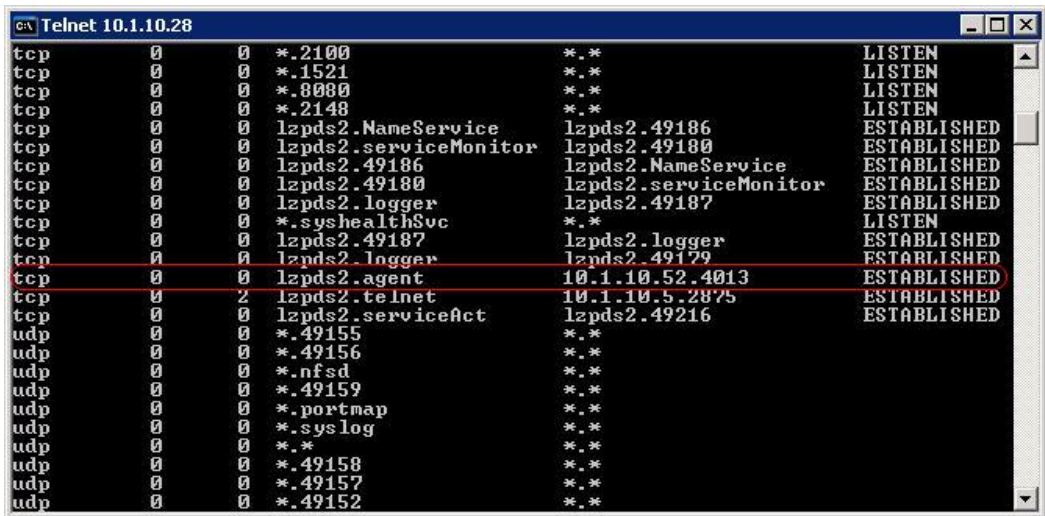

All tests passed. The synTelate agent application successfully handled both inbound and outbound calls from, inbound and outbound campaigns

8. Verification Steps

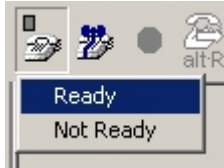

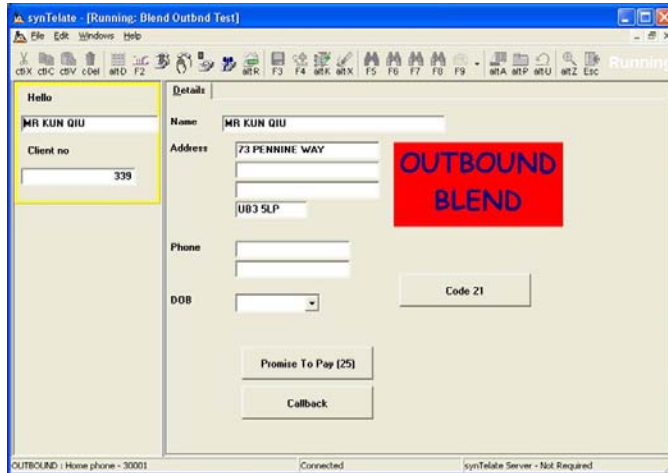

This section provides the tests that can be performed to verify proper configuration of Avaya Communication Manager, Avaya Application Enablement Services, and synTelate Agent PC.

8.1. Verify Avaya Communication Manager and Avaya Enablement Services

The following steps can ensure that the communication between Avaya Communication Manager and the Avaya Application Enablement Services server is working.

Step	Description																												
1.	<div>Verify that the service state of the TSAPI link is established.</div> <div><pre>status aesvcs cti-link</pre><table><tr><th colspan="7">AE SERVICES CTI LINK STATUS</th></tr><tr><th>CTI Link</th><th>Version</th><th>Mnt Busy</th><th>AE Services Server</th><th>Service State</th><th>Msgs Sent</th><th>Msgs Rcvd</th></tr><tr><td>1</td><td>4</td><td>no</td><td>AESEServer</td><td>established</td><td>15</td><td>15</td></tr><tr><td>3</td><td>4</td><td>no</td><td>AESEServer</td><td>established</td><td>15</td><td>15</td></tr></table></div>	AE SERVICES CTI LINK STATUS							CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd	1	4	no	AESEServer	established	15	15	3	4	no	AESEServer	established	15	15
AE SERVICES CTI LINK STATUS																													
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd																							
1	4	no	AESEServer	established	15	15																							
3	4	no	AESEServer	established	15	15																							
2.	<div>From the synTelate agent workstation, telnet to Avaya PC3. Enter the “netstat -a” command to verify the connection with Avaya PC3. The results of the “netstat -a” should show an ESTABLISHED synTelate agent connection.</div> <div></div>																												

8.2. Verify synTelate Agent

Step	Description
1.	<p>In the synTelate agent screen, click the telephone button icon on the toolbar as shown below and select Ready from the drop down menu that appears.</p> 
2.	<p>Select job type and job name from the Campaign List dialog box. Click OK.</p> 
3.	<p>The following screen displays an example of an outbound campaign customer record screen pop.</p> 

9. Support

Technical support for the synTelate application is available as follows:

- Telephone Help Desk - +44 (0)141 552 8800 or 0800 052 1015
- Support on the Web - <http://support.inisoft.co.uk/start.asp>.

10. Conclusion

These Application Notes describe the required configuration steps for the synTelate Agent 3.0 application to successfully interoperate with Avaya Proactive Contact 3.0.1 and Avaya PG230 gateway. All test cases were completed successfully and the configuration described in these Application Notes has been successfully compliance tested.
