

## **Avaya Solution & Interoperability Test Lab**

---

# **Application Notes for dvsAnalytics Encore with Avaya Proactive Contact with CTI and Avaya Aura® Application Enablement Services – Issue 1.0**

### **Abstract**

These Application Notes describe the configuration steps required for dvsAnalytics Encore to interoperate with Avaya Proactive Contact with CTI and Avaya Aura® Application Enablement Services. dvsAnalytics Encore is a call recording solution.

In the compliance testing, dvsAnalytics Encore used the Event Services interface from Avaya Proactive Contact and the Telephony Services Application Programmer Interface from Avaya Aura® Application Enablement Services to obtain information on agent states and calls, and used the Service Observing feature via the Avaya Aura® Application Enablement Services Device, Media, and Call Control interface to capture the media associated with the monitored agents for call recording.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

# 1. Introduction

These Application Notes describe the configuration steps required for dvsAnalytics Encore to interoperate with Avaya Proactive Contact with CTI and Avaya Aura® Application Enablement Services. dvsAnalytics Encore is a call recording solution.

In the compliance testing, dvsAnalytics Encore used the Event Services interface from Avaya Proactive Contact and the Telephony Services Application Programmer Interface (TSAPI) from Avaya Aura® Application Enablement Services to obtain information on agent states and calls, and used the Service Observing feature via the Avaya Aura® Application Enablement Services Device, Media, and Call Control (DMCC) interface to capture the media associated with the monitored agents for call recording.

The Event Services and TSAPI interfaces are used by dvsAnalytics Encore to monitor the agent stations and calls, and the DMCC interface is used by dvsAnalytics Encore to register virtual IP softphones to pick up the media for call recording. dvsAnalytics Encore starts the call recording by sending a Service Observing button press from a virtual IP softphone via the DMCC interface to observe the active call. The Event Services and/or TSAPI event reports are also used to determine when to stop the call recordings.

This compliance test covered the recording of calls using the Avaya Proactive Contact with CTI deployment option.

## 2. General Test Approach and Test Results

The feature test cases were performed both automatically and manually. Upon start of the Encore application, the application automatically registers virtual IP softphones to Communication Manager using DMCC, requests monitoring on the skill groups and agent stations using TSAPI, and requests monitoring of agent states and call events using Event Services.

For the manual part of the testing, each call was handled manually on the agent station with generation of unique audio content for the recordings. Necessary user actions such as hold and reconnect were performed from the agent telephones to test the different call scenarios.

The serviceability test cases were performed manually by disconnecting/reconnecting the Ethernet cable to Encore. The verification of tests included using the Encore logs for proper message exchanges, and using the Encore web interface for proper logging and playback of calls.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

## 2.1. Interoperability Compliance Testing

The interoperability compliance test included feature and serviceability testing.

The feature testing focused on verifying the following on Encore:

- Handling of Event Services agent states and call events.
- Handling of TSAPI messages in the areas of event notification and value queries.
- Use of DMCC registration services to register and un-register virtual IP softphones.
- Use of DMCC physical device services to activate Service Observing for virtual IP softphones to obtain the media.
- Proper recording, logging, and playback of calls for agent blending scenarios involving inbound, outbound, agent drop, customer drop, hold, reconnect, simultaneous calls, conference, and transfer.

The serviceability testing focused on verifying the ability of Encore to recover from adverse conditions, such as disconnecting/reconnecting the Ethernet cable to Encore.

## 2.2. Test Results

All test cases were executed. The following were the observations on Encore from the compliance testing.

- The recording playback via the web interface may experience random short loud noise at the end of the recording.
- All short connections to phantom CTI stations and announcements were included as separate recording entries.
- When Hold event is configured to be ignored, then multiple calls at the user are merged into one recording entry with DNIS posting from the most recent call.
- The number of softphones to configure need to take into account the small interval of 500ms that a softphone will not be available between recordings.
- Upon each link disruption, a new Event Services connection is created with the old one still in existence. The multiple connections have no harmful effects other than tying up more ports than necessary.

## 2.3. Support

Technical support on Encore can be obtained through the following:

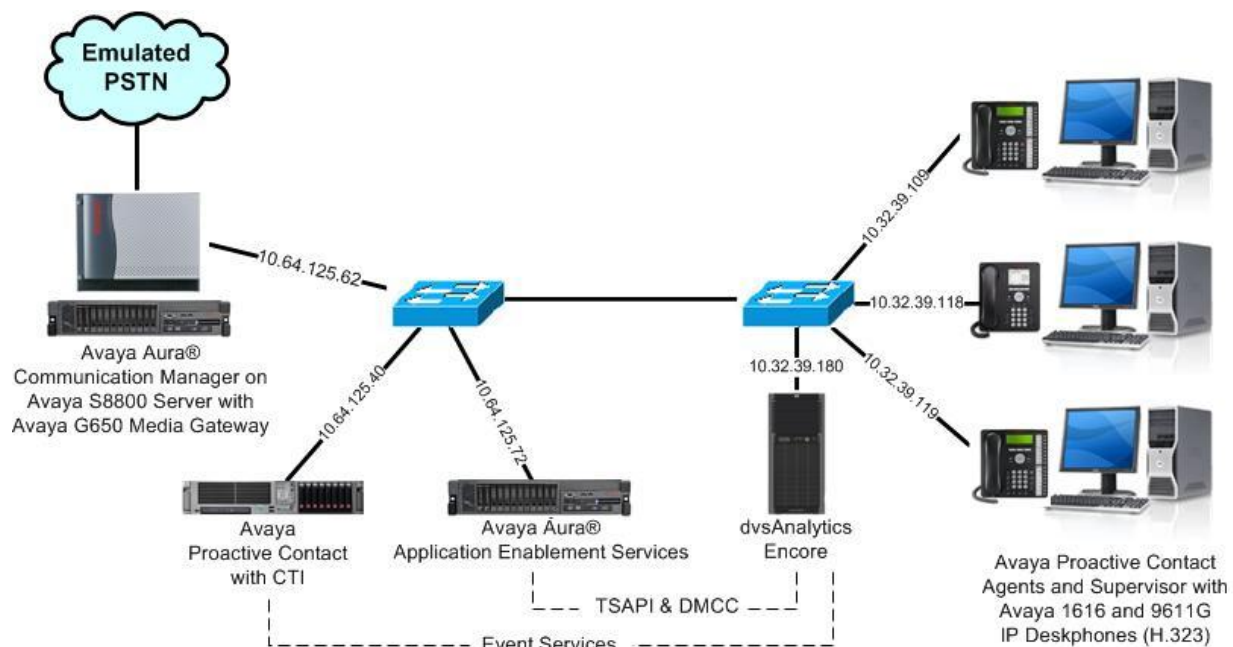

- **Phone:** (800) 910-4564
- **Email:** [Support@dvsAnalytics.com](mailto:Support@dvsAnalytics.com)

### 3. Reference Configuration

The detailed administration of basic connectivity between Communication Manager and Proactive Contact, between Communication Manager and Application Enablement Services, and of contact center devices are not the focus of these Application Notes and will not be described.

In the compliance testing, Encore monitored the skill group and agent station extensions shown in the table below. Note that the skill groups are associated with the inbound ACD.

Contact Center Device Type	Extension
Skill Group	41410, 41412
Agent Station	65001, 65002

**Figure 1: Compliance Testing Configuration**

## 4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment	Software
Avaya Aura® Communication Manager on Avaya S8800 Server	6.0.1 SP7 (R016x.00.1.510.1-19528)
Avaya G650 Media Gateway <ul style="list-style-type: none"><li>• TN799DP C-LAN Circuit Pack</li><li>• TN2302AP IP Media Processor</li></ul>	HW01 FW040 HW12 FW121
Avaya Aura® Application Enablement Services	6.1.2
Avaya Proactive Contact with CTI	5.0.1
Avaya Proactive Contact Agent	5.0.1
Avaya Proactive Contact Supervisor	5.0.1
Avaya 1616 IP Deskphones (H.323)	1.302S
Avaya 9611G IP Deskphone (H.323)	6.020S
dvsAnalytics Encore on Windows Server 2008 R2 Standard <ul style="list-style-type: none"><li>• Avaya TSAPI Windows Client (csta32.dll)</li><li>• Avaya DMCC SDK</li><li>• Avaya Event Services SDK (TAO.dll)</li></ul>	2.3.3 6.1.1.469 6.2 1.6a_p8

## 5. Configure Avaya Aura® Communication Manager

This section provides the procedures for configuring Communication Manager. The procedures include the following areas:

- Verify License
- Administer system parameters features
- Administer IP codec set
- Administer class of restriction
- Administer virtual IP softphones
- Administer agent stations

### 5.1. Verify License

Log in to the System Access Terminal (SAT) to verify that the Communication Manager license has proper permissions for features illustrated in these Application Notes. Use the “display system-parameters customer-options” command to verify that the **Computer Telephony Adjunct Links** customer option is set to “y” on **Page 3**. If this option is not set to “y”, then contact the Avaya sales team or business partner for a proper license file.

display system-parameters customer-options		Page	3 of	11
OPTIONAL FEATURES				
Abbreviated Dialing Enhanced List?	y	Audible Message Waiting?	y	
Access Security Gateway (ASG)?	n	Authorization Codes?	y	
Analog Trunk Incoming Call ID?	y	CAS Branch?	n	
A/D Grp/Sys List Dialing Start at 01?	y	CAS Main?	n	
Answer Supervision by Call Classifier?	y	Change COR by FAC?	n	
ARS?	y	<b>Computer Telephony Adjunct Links?</b>	<b>y</b>	
ARS/AAR Partitioning?	y	Cvg Of Calls Redirected Off-net?	y	
ARS/AAR Dialing without FAC?	y	DCS (Basic)?	y	

Navigate to **Page 6**, and verify that the **Service Observing (Basic)** customer option is set to “y”.

display system-parameters customer-options		Page	6 of	11
CALL CENTER OPTIONAL FEATURES				
Call Center Release: 6.0				
ACD?	y	Reason Codes?	y	
BCMS (Basic)?	y	Service Level Maximizer?	n	
BCMS/VuStats Service Level?	y	<b>Service Observing (Basic)?</b>	<b>y</b>	
BSR Local Treatment for IP & ISDN?	y	Service Observing (Remote/By FAC)?	y	
Business Advocate?	n	Service Observing (VDNs)?	y	

## 5.2. Administer System Parameters Features

Use the “change system-parameters features” command to enable **Allow Two Observers in Same Call**, which is located on **Page 11**. Set **Service Observing: Warning Tone** as desired.

```
change system-parameters features                                     Page 11 of 19
                                FEATURE-RELATED SYSTEM PARAMETERS

SERVICE OBSERVING
  Service Observing: Warning Tone? y      or Conference Tone? n
  Service Observing Allowed with Exclusion? n
  Allow Two Observers in Same Call? y
```

## 5.3. Administer IP Codec Set

Use the “change ip-codec-set n” command, where “n” is an existing codec set number used for integration with Encore. For **Audio Codec**, enter “G.711MU”, which is the only codec type supported by Encore. In the compliance testing, this IP codec set was assigned to the agents and to the virtual IP softphones used by Encore.

```
change ip-codec-set 7                                             Page 1 of 2
                                IP Codec Set

Codec Set: 7

Audio      Silence      Frames      Packet
Codec      Suppression  Per Pkt    Size(ms)
1: G.711MU      n          2         20
2:
```

## 5.4. Administer Class of Restriction

Enter the “change cor n” command, where “n” is the class of restriction (COR) number used for integration with Encore. Set the **Can Be Service Observed** and **Can Be A Service Observer** fields to “y”, as shown below. For the compliance testing, this COR was assigned to the agents and to the virtual IP softphones used by Encore.

change cor 2	Page 1 of 23
CLASS OF RESTRICTION	
COR Number: 2	
COR Description:	
FRL: 0	APLT? y
<b>Can Be Service Observed? y</b>	Calling Party Restriction: none
<b>Can Be A Service Observer? y</b>	Called Party Restriction: none
Time of Day Chart: 1	Forced Entry of Account Codes? n
Priority Queuing? n	Direct Agent Calling? n
Restriction Override: none	Facility Access Trunk Test? n
Restricted Call List? n	Can Change Coverage? n

## 5.5. Administer Virtual IP Softphones

Add a virtual softphone using the “add station n” command, where “n” is an available extension number. Enter the following values for the specified fields, and retain the default values for the remaining fields.

- **Type:** “4610”
- **Name:** A descriptive name.
- **Security Code:** A desired value.
- **COR:** The class of restriction number from **Section 5.4**.
- **IP SoftPhone:** “y”

add station 65991	Page 1 of 5

	<b>4610</b>		<b>no</b>			<b>1</b>	<b>1</b>		

## 5.6. Administer Agent Stations

Use the “change station n” command, where “n” is the first agent station extension from **Section 3**. For **COR**, enter the class of restriction number from **Section 5.4**.

change station 65001		Page	1 of	5

## 6. Configure Avaya Aura® Application Enablement Services

This section provides the procedures for configuring Application Enablement Services. The procedures include the following areas:

- Verify license
- Launch OAM interface
- Administer H.323 gatekeeper
- Disable security database
- Restart TSAPI service
- Obtain Tlink name
- Administer Encore user
- Enable DMCC unencrypted port

### 6.1. Verify License

Access the Web License Manager interface by using the URL “https://ip-address:52233/WebLM/ index.jsp” in an Internet browser window, where “ip-address” is the IP address of the license server.

The **Web License Manager** screen is displayed. Log in using the appropriate credentials.

The image shows the Avaya Web License Manager (WebLM v4.6) login interface. At the top, the Avaya logo is displayed in red. Below it, a red banner contains the text "Web License Manager (WebLM v4.6)". The main heading is "Logon". There are two input fields: "User Name:" and "Password:". To the right of the password field is a dark gray button with a white right-pointing arrow.

The **Web License Manager** screen below is displayed. Select **Licensed Products** → **APPL\_ENAB** → **Application\_Enablement** in the left pane, to display the **Licensed Features** screen in the right pane.

Verify that there are sufficient licenses for **TSAPI Simultaneous Users** and **Device Media and Call Control**, as shown below.

## 6.2. Launch OAM Interface

Access the OAM web-based interface by using the URL “https://ip-address” in an Internet browser window, where “ip-address” is the IP address of the Application Enablement Services server.

The **Please login here** screen is displayed. Log in using the appropriate credentials.

The screenshot shows the Avaya Application Enablement Services Management Console login interface. At the top left is the Avaya logo. To its right, the text 'Application Enablement Services' and 'Management Console' is displayed. Below this is a large red horizontal bar. In the center, there is a light gray box with the text 'Please login here:'. Inside this box are two input fields: 'Username' and 'Password', each followed by a text box. Below these fields is a 'Login' button. At the bottom of the page, there is a copyright notice: '© Copyright © 2009-2010 Avaya Inc. All Rights Reserved.'

The **Welcome to OAM** screen is displayed next.

The screenshot shows the Avaya Application Enablement Services Management Console 'Welcome to OAM' screen. At the top left is the Avaya logo. To its right, the text 'Application Enablement Services' and 'Management Console' is displayed. In the top right corner, there is a welcome message: 'Welcome: User', 'Last login: Tue Jul 24 10:24:02 2012 from 10.32.39.20', 'HostName/IP: aes\_125\_72/10.64.125.72', 'Server Offer Type: VIRTUAL\_APPLIANCE', and 'SW Version: r6-1-2-32-0'. Below this is a red horizontal bar with 'Home' on the left and 'Home | Help | Logout' on the right. On the left side, there is a vertical menu with the following items: 'AE Services', 'Communication Manager Interface', 'Licensing', 'Maintenance', 'Networking', 'Security', 'Status', 'User Management', 'Utilities', and 'Help'. The main content area on the right is titled 'Welcome to OAM' and contains the following text: 'The AE Services Operations, Administration, and Management (OAM) Web provides you with tools for managing the AE Server. OAM spans the following administrative domains:'. Below this is a bulleted list of administrative domains and their functions: 'AE Services - Use AE Services to manage all AE Services that you are licensed to use on the AE Server.', 'Communication Manager Interface - Use Communication Manager Interface to manage switch connection and dialplan.', 'Licensing - Use Licensing to manage the license server.', 'Maintenance - Use Maintenance to manage the routine maintenance tasks.', 'Networking - Use Networking to manage the network interfaces and ports.', 'Security - Use Security to manage Linux user accounts, certificate, host authentication and authorization, configure Linux-PAM (Pluggable Authentication Modules for Linux) and so on.', 'Status - Use Status to obtain server status informations.', 'User Management - Use User Management to manage AE Services users and AE Services user-related resources.', 'Utilities - Use Utilities to carry out basic connectivity tests.', and 'Help - Use Help to obtain a few tips for using the OAM Help system'. At the bottom of the main content area, there is a note: 'Depending on your business requirements, these administrative domains can be served by one administrator for both domains, or a separate administrator for each domain.'

### 6.3. Administer H.323 Gatekeeper

Select **Communication Manager Interface** → **Switch Connections** from the left pane. The **Switch Connections** screen shows a listing of the existing switch connections.

Locate the connection name associated with the relevant Communication Manager, in this case “S8800”, and select the corresponding radio button. Click **Edit H.323 Gatekeeper**.

The screenshot shows the Avaya Application Enablement Services Management Console. The left navigation pane is expanded to 'Communication Manager Interface' and 'Switch Connections'. The main content area displays a table of switch connections. The table has four columns: Connection Name, Processor Ethernet, Msg Period, and Number of Active Connections. There is one entry with Connection Name 'S8800', Processor Ethernet 'No', Msg Period '30', and Number of Active Connections '1'. Below the table are buttons for 'Edit Connection', 'Edit PE/CLAN IPs', 'Edit H.323 Gatekeeper', 'Delete Connection', and 'Survivability Hierarchy'. The 'Edit H.323 Gatekeeper' button is highlighted.

Connection Name	Processor Ethernet	Msg Period	Number of Active Connections
S8800	No	30	1

The **Edit H.323 Gatekeeper** screen is displayed. Enter the IP address of a C-LAN circuit pack or the Processor C-LAN on Communication Manager to be used as H.323 gatekeeper, in this case “10.64.125.32” as shown below. Click **Add Name or IP**.

The screenshot shows the 'Edit H.323 Gatekeeper - S8800' screen. The left navigation pane is the same as the previous screenshot. The main content area has a text input field containing '10.64.125.32' and an 'Add Name or IP' button. Below the input field is a label 'Name or IP Address' and two buttons: 'Delete IP' and 'Back'.

## 6.4. Disable Security Database

Select **Security** → **Security Database** → **Control** from the left pane, to display the **SDB Control for DMCC, TSAPI, JTAPI and Telephony Web Services** screen in the right pane. Uncheck both fields below, and click **Apply Changes**.

The screenshot shows the Avaya Application Enablement Services Management Console. The top header includes the Avaya logo, the title "Application Enablement Services Management Console", and a welcome message for the user. The left navigation pane shows a tree structure with "Security" expanded, and "Security Database" and "Control" selected. The main content area displays the "SDB Control for DMCC, TSAPI, JTAPI and Telephony Web Services" screen. It contains two checkboxes: "Enable SDB for DMCC Service" and "Enable SDB for TSAPI Service, JTAPI and Telephony Web Services", both of which are unchecked. Below the checkboxes is an "Apply Changes" button.

## 6.5. Restart TSAPI Service

Select **Maintenance** → **Service Controller** from the left pane, to display the **Service Controller** screen in the right pane. Check the **TSAPI Service**, and click **Restart Service**.

The screenshot shows the Avaya Application Enablement Services Management Console. The top header includes the Avaya logo, the title "Application Enablement Services Management Console", and a welcome message for the user. The left navigation pane shows a tree structure with "Maintenance" expanded, and "Service Controller" selected. The main content area displays the "Service Controller" screen. It contains a table with two columns: "Service" and "Controller Status". The table lists several services, including ASAI Link Manager, DMCC Service, CVLAN Service, DLG Service, Transport Layer Service, and TSAPI Service. The TSAPI Service is checked, and its status is "Running". Below the table is a link "Status and Control" and a row of buttons: "Start", "Stop", "Restart Service", "Restart AE Server", "Restart Linux", and "Restart Web Server".

## 6.6. Obtain Tlink Name

Select **Security** → **Security Database** → **Tlinks** from the left pane. The **Tlinks** screen shows a listing of the Tlink names. Make a note of the applicable Tlink name, to be used later for configuring Encore.

In this case, the associated encrypted Tlink name is “AVAYA#S8800#CSTA-S#AES\_125\_72”, which was created as part of the basic connectivity with Proactive Contact. Note the use of the switch connection “S8800” from **Section 6.3** as part of the Tlink name.

The screenshot displays the Avaya Application Enablement Services Management Console. The top header includes the Avaya logo, the title "Application Enablement Services Management Console", and a welcome message for the user. The main navigation pane on the left lists various services, with "Security" expanded to show "Security Database" and "Tlinks" selected. The main content area shows a list of Tlinks with two entries, both having the name "AVAYA#S8800#CSTA-S#AES\_125\_72". A "Delete Tlink" button is visible below the list.

## 6.7. Administer Encore User

Select **User Management** → **User Admin** → **Add User** from the left pane, to display the **Add User** screen in the right pane.

Enter desired values for **User Id**, **Common Name**, **Surname**, **User Password**, and **Confirm Password**. For **CT User**, select “Yes” from the drop-down list. Retain the default value in the remaining fields. Click **Apply** at the bottom of the screen (not shown below).

The screenshot displays the Avaya Application Enablement Services Management Console. The top header includes the Avaya logo, the title 'Application Enablement Services Management Console', and a welcome message: 'Welcome: User', 'Last login: Tue Jul 24 10:24:02 2012 from 10.32.39.20', 'HostName/IP: aes\_125\_72/10.64.125.72', 'Server Offer Type: VIRTUAL\_APPLIANCE', and 'SW Version: r6-1-2-32-0'. Below the header is a red navigation bar with 'User Management | User Admin | Add User' and links for 'Home | Help | Logout'. The left sidebar contains a tree view with categories: 'AE Services', 'Communication Manager Interface', 'Licensing', 'Maintenance', 'Networking', 'Security', 'Status', 'User Management' (expanded), 'Service Admin', 'User Admin' (expanded), 'Add User' (selected), 'Change User Password', 'List All Users', 'Modify Default Users', 'Search Users', 'Utilities', and 'Help'. The main content area is titled 'Add User' and contains a form with the following fields: '\* User Id' (text box with 'encore'), '\* Common Name' (text box with 'encore'), '\* Surname' (text box with 'encore'), '\* User Password' (password box with 8 dots), '\* Confirm Password' (password box with 8 dots), 'Admin Note' (text box), 'Avaya Role' (dropdown menu with 'None' selected), 'Business Category' (text box), 'Car License' (text box), 'CM Home' (text box), 'Css Home' (text box), 'CT User' (dropdown menu with 'Yes' selected), 'Department Number' (text box), 'Display Name' (text box), 'Employee Number' (text box), and 'Employee Type' (text box). A note above the form states: 'Fields marked with \* can not be empty.'

## 6.8. Enable DMCC Unencrypted Port

Select **Networking** → **Ports** from the left pane, to display the **Ports** screen in the right pane.

In the **DMCC Server Ports** section, select the radio button for **Unencrypted Port** under the **Enabled** column, as shown below.

**AVAYA****Application Enablement Services**

## 7. Configure Avaya Proactive Contact

This section provides the procedures for configuring Avaya Proactive Contact.

### 7.1. Obtain Host Name

Log in to the Linux shell of the Avaya Proactive Contact server. Use the “uname -a” command to obtain the host name, which will be used later for configuring Encore.

In the compliance testing, the host name of the Avaya Proactive Contact server is “lzpds4”, as shown below.

```
$ uname -a
Linux lzpds4 2.6.18-238.1.1.el5PAE #1 SMP Tue Jan 4 13:53:16 EST 2011 i686 athlon i386
GNU/Linux
LZPDS4(admin)/opt/avaya/pds [1001]
$
```

## 8. Configure dvsAnalytics Encore

This section provides the procedures for configuring Encore. The procedures include the following areas:

- Administer softphones
- Administer CTISetup
- Launch CT Gateways
- Administer CT Gateways

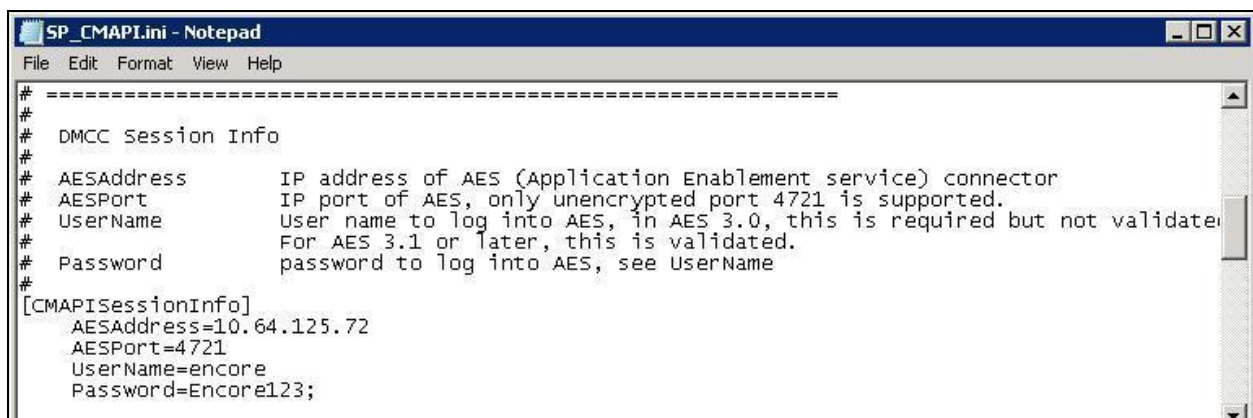

The configuration of Encore is performed by dvsAnalytics installers and dealers. The procedural steps are presented in these Application Notes for informational purposes.

### 8.1. Administer Softphones

From the Encore server, navigate to the **D:\EncData\Config\Softphone** directory to edit the **SP\_CMAPI.ini** file shown below.

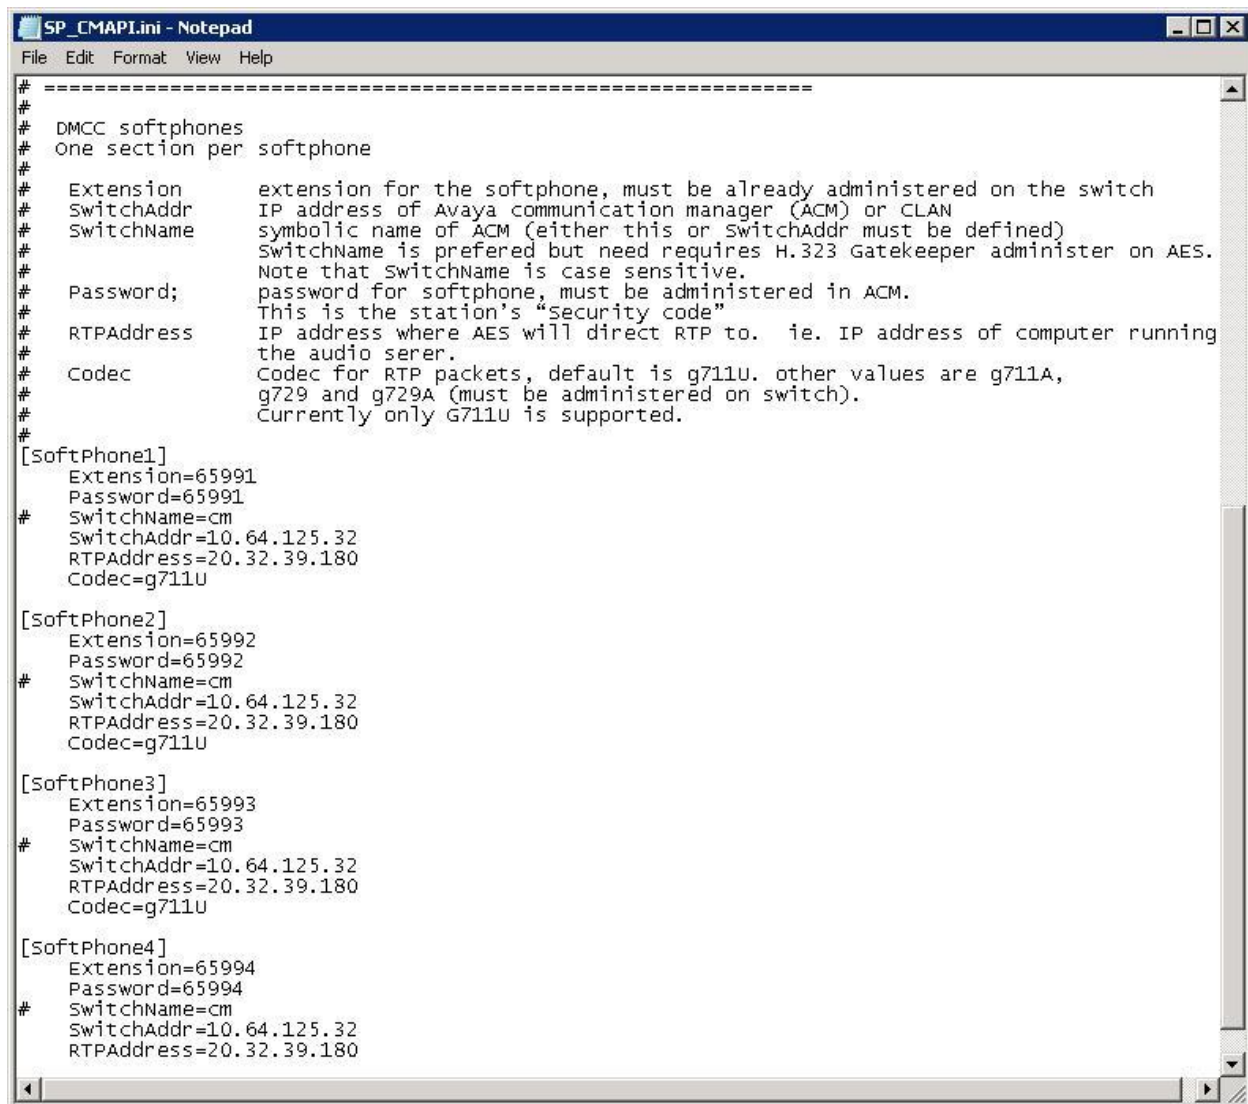

Scroll down to the **DMCC Session Info** section. Under **CMAPISessionInfo**, set **AESAddress** to the IP address of the Application Enablement Services server. Set **UserName** and **Password** to the Encore user credentials from **Section 6.7**. Retain the default value for **AESPort**.

Scroll down to the **DMCC softphones** section. Under **Softphone1**, set **Extension** and **Password** to the first virtual IP softphone extension and security code from **Section 5.5**. Set **SwitchAddr** to the IP address of the H.323 Gatekeeper from **Section 6.3**, or set **SwitchName** to the host name of the H.323 Gatekeeper. Set **RTPAddress** to the IP address of the Encore server. Retain the default values in the remaining fields.

Create additional softphone lines as necessary. In the compliance testing, four softphones were configured to correspond to the four virtual IP softphones from **Section 5.5**.

```
# =====
#
# DMCC softphones
# One section per softphone
#
# Extension      extension for the softphone, must be already administered on the switch
# SwitchAddr     IP address of Avaya communication manager (ACM) or CLAN
# SwitchName     symbolic name of ACM (either this or SwitchAddr must be defined)
#                SwitchName is preferred but need requires H.323 Gatekeeper administer on AES.
#                Note that SwitchName is case sensitive.
# Password;      password for softphone, must be administered in ACM.
#                This is the station's "Security code"
# RTPAddress     IP address where AES will direct RTP to.  ie. IP address of computer running
#                the audio server.
# Codec          Codec for RTP packets, default is g711u. other values are g711A,
#                g729 and g729A (must be administered on switch).
#                Currently only G711u is supported.
#
[SoftPhone1]
Extension=65991
Password=65991
# SwitchName=cm
SwitchAddr=10.64.125.32
RTPAddress=20.32.39.180
Codec=g711u

[SoftPhone2]
Extension=65992
Password=65992
# SwitchName=cm
SwitchAddr=10.64.125.32
RTPAddress=20.32.39.180
Codec=g711u

[SoftPhone3]
Extension=65993
Password=65993
# SwitchName=cm
SwitchAddr=10.64.125.32
RTPAddress=20.32.39.180
Codec=g711u

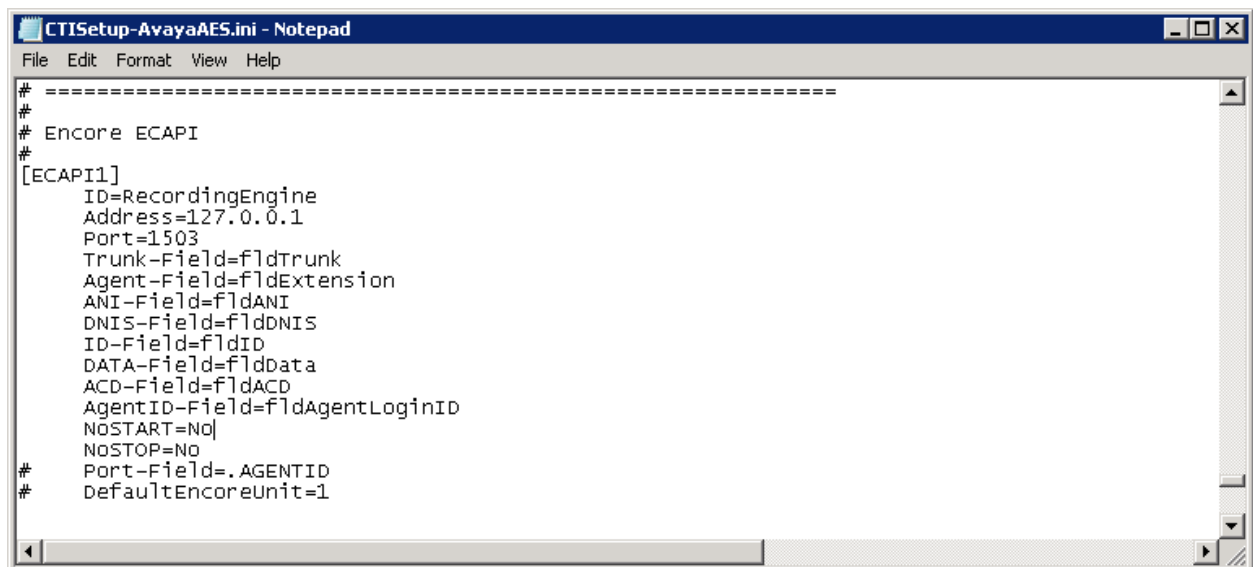

[SoftPhone4]
Extension=65994
Password=65994
# SwitchName=cm
SwitchAddr=10.64.125.32
RTPAddress=20.32.39.180
```

## 8.2. Administer CTISetup

Navigate to the **D:\EncData\Config\CTGateway** directory to edit the **CTISetup-AvayaAES.ini** file.

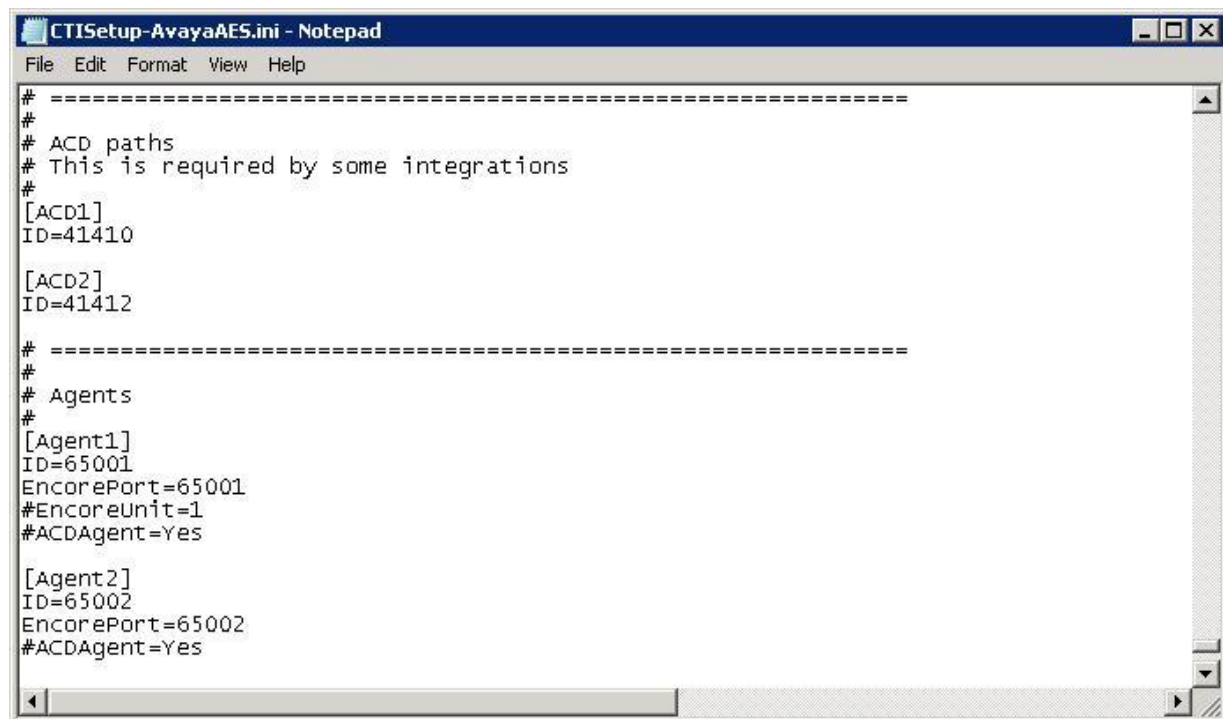

Scroll down to the **Encore ECAPI** section. Under **ECAPI1**, make sure all parameters are set to the default values shown below.

Scroll to the **ACD paths** section. Under **ACD1**, set **ID** to the first skill group extension from **Section 3**. Create additional ACD parameter lines as necessary when more than one skill group is being monitored.

Scroll to the **Agents** section. Under **Agent1**, set **ID** and **EncorePort** to the first agent station extension from **Section 3**. Create additional agent parameter lines as necessary when more than one agent is being monitored.

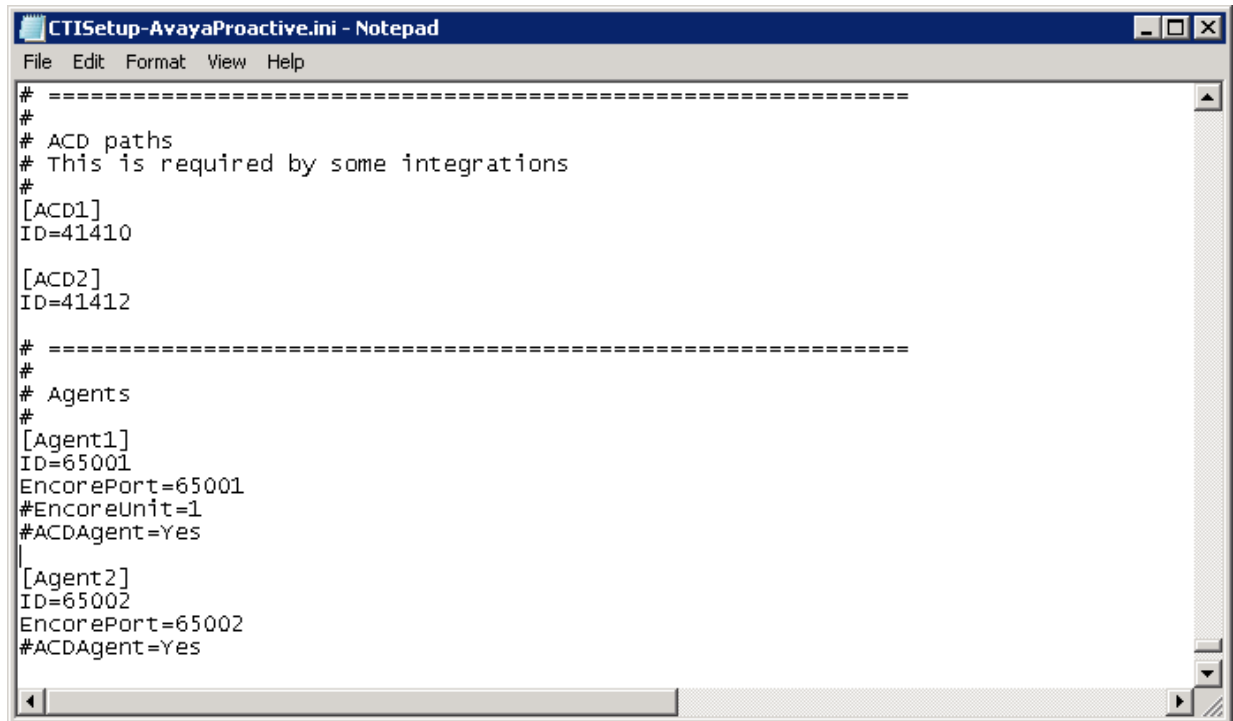

```
# =====  
#  
# ACD paths  
# This is required by some integrations  
#  
[ACD1]  
ID=41410  
  
[ACD2]  
ID=41412  
  
# =====  
#  
# Agents  
#  
[Agent1]  
ID=65001  
EncorePort=65001  
#EncoreUnit=1  
#ACDAgent=Yes  
  
[Agent2]  
ID=65002  
EncorePort=65002  
#ACDAgent=Yes
```

In the same **D:\EncData\Config\CTGateway** directory, edit the **CTISetup-AvayaProactiveContact.ini** file shown below.

Scroll to the **ACD paths** and **Agents** sections, and make the same changes as described above for **CTISetup-AvayaAES.ini**.

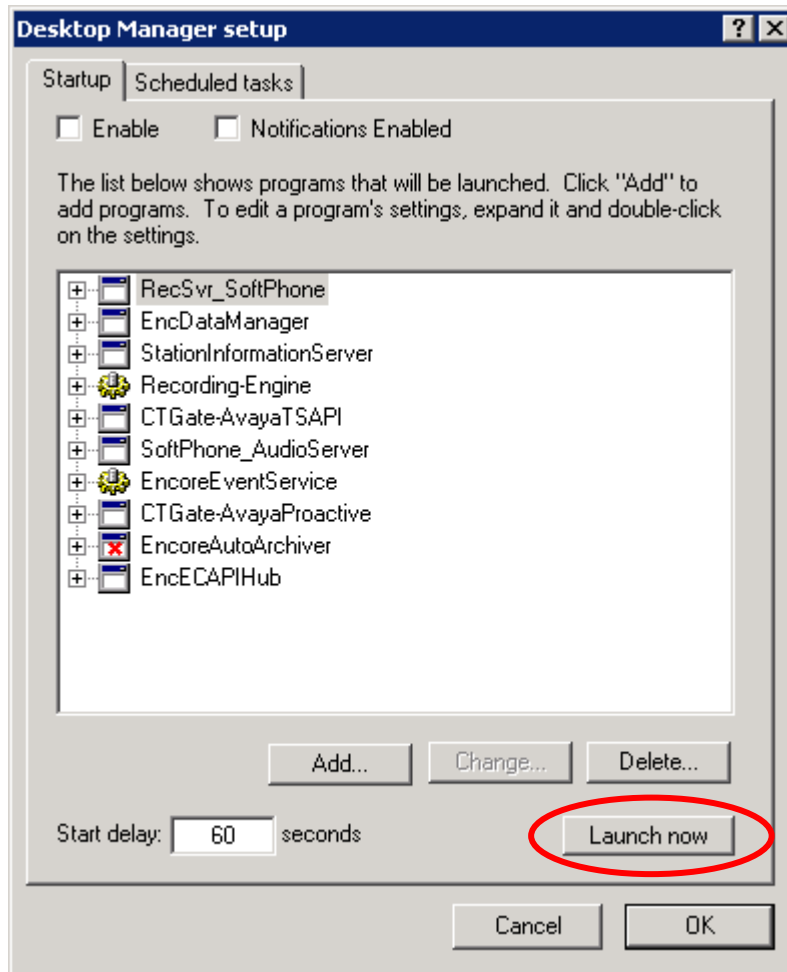

```
# =====  
#  
# ACD paths  
# This is required by some integrations  
#  
[ACD1]  
ID=41410  
  
[ACD2]  
ID=41412  
  
# =====  
#  
# Agents  
#  
[Agent1]  
ID=65001  
EncorePort=65001  
#EncoreUnit=1  
#ACDAgent=Yes  
|  
[Agent2]  
ID=65002  
EncorePort=65002  
#ACDAgent=Yes
```

### 8.3. Launch CT Gateways

Right click on the **Desktop Manager** icon from the system tray, and select **Configure**.

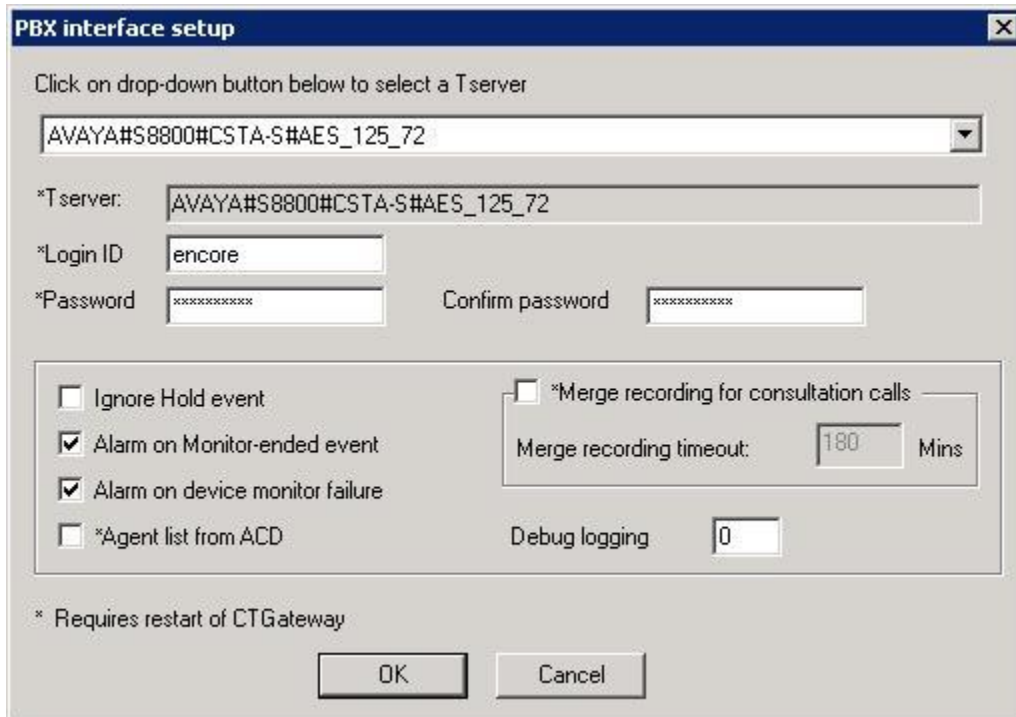

The **Desktop Manager setup** screen is displayed. Click **Launch now** to launch the CT Gateways.

## 8.4. Administer CT Gateways

The **CT Gateway (AvayaTSAPI)** and **CT Gateway (AvayaProactive)** screens are displayed (not shown). From the **CT Gateway (AvayaTSAPI)** screen, select **PBX > Configure** from the top menu.

The **PBX interface setup** screen below is displayed. Select the Tlink name in **Section 6.6** from the drop-down list. For **Login ID**, **Password**, and **Confirm password**, enter the Encore user credentials from **Section 6.7**. Retain the default values in the remaining fields.

The image shows a 'PBX interface setup' dialog box with a title bar and a close button. Inside, there is a text box with a drop-down arrow containing 'AVAYA#S8800#CSTA-S#AES\_125\_72'. Below this is a label '\*Tserver:' followed by a text box with the same value. Then, '\*Login ID' is followed by a text box with 'encore'. '\*Password' is followed by a masked text box (eight asterisks), and 'Confirm password' is followed by another masked text box. A group box contains several options: 'Ignore Hold event' (unchecked), 'Alarm on Monitor-ended event' (checked), 'Alarm on device monitor failure' (checked), '\*Agent list from ACD' (unchecked), '\*Merge recording for consultation calls' (unchecked), 'Merge recording timeout:' with a text box containing '180' and 'Mins' to its right, and 'Debug logging' with a text box containing '0'. At the bottom, there is a note '\* Requires restart of CTGateway' and two buttons: 'OK' and 'Cancel'.

PBX interface setup

Click on drop-down button below to select a Tserver

AVAYA#S8800#CSTA-S#AES\_125\_72

\*Tserver: AVAYA#S8800#CSTA-S#AES\_125\_72

\*Login ID: encore

\*Password: xxxxxxxxxx Confirm password: xxxxxxxxxx

☐ Ignore Hold event

☒ Alarm on Monitor-ended event

☒ Alarm on device monitor failure

☐ \*Agent list from ACD

☐ \*Merge recording for consultation calls

Merge recording timeout: 180 Mins

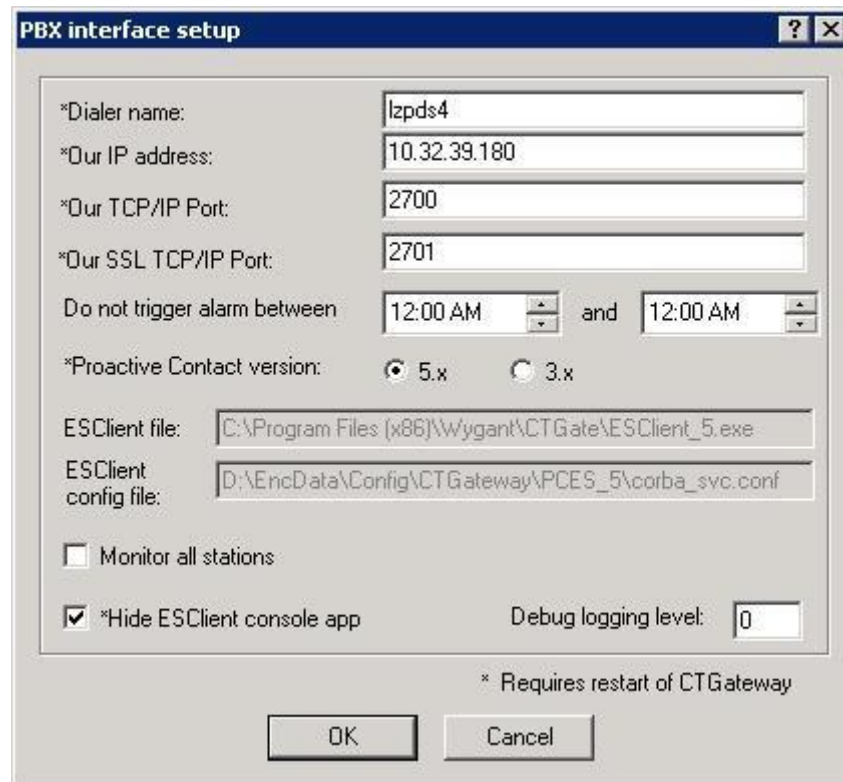

Debug logging: 0

\* Requires restart of CTGateway

OK Cancel

From the **CT Gateway (AvayaProactive)** screen (not shown), select **PBX > Configure** from the top menu.

The **PBX interface setup** screen below is displayed. For **Dialer name**, enter the host name of Proactive Contact from **Section 7.1**. For **Our IP address**, enter the IP address of the Encore server. Retain the default values in the remaining fields.

The image shows a Windows-style dialog box titled "PBX interface setup". It contains several input fields and checkboxes. The fields are: "\*Dialer name:" with the value "lzpds4"; "\*Our IP address:" with the value "10.32.39.180"; "\*Our TCP/IP Port:" with the value "2700"; "\*Our SSL TCP/IP Port:" with the value "2701"; "Do not trigger alarm between:" with two time pickers both set to "12:00 AM"; "\*Proactive Contact version:" with two radio buttons, "5.x" (selected) and "3.x"; "ESClient file:" with the path "C:\Program Files (x86)\Wygant\CTGate\ESClient\_5.exe"; "ESClient config file:" with the path "D:\EncData\Config\CTGateway\PCES\_5\corba\_svc.conf"; a checkbox "Monitor all stations" which is unchecked; a checkbox "\*Hide ESClient console app" which is checked; and a "Debug logging level:" spinner box set to "0". At the bottom right, there is a note "\* Requires restart of CTGateway". At the bottom center are "OK" and "Cancel" buttons.

*Dialer name:	lzpds4
*Our IP address:	10.32.39.180
*Our TCP/IP Port:	2700
*Our SSL TCP/IP Port:	2701
Do not trigger alarm between	12:00 AM and 12:00 AM
*Proactive Contact version:	<input checked="" type="radio"/> 5.x <input type="radio"/> 3.x
ESClient file:	C:\Program Files (x86)\Wygant\CTGate\ESClient_5.exe
ESClient config file:	D:\EncData\Config\CTGateway\PCES_5\corba_svc.conf
<input type="checkbox"/> Monitor all stations	
<input checked="" type="checkbox"/> *Hide ESClient console app	
Debug logging level:	0

\* Requires restart of CTGateway

OK Cancel

## 9. Verification Steps

This section provides the tests that can be performed to verify proper configuration of Communication Manager, Proactive Contact, Application Enablement Services, and Encore.

### 9.1. Verify Avaya Aura® Communication Manager

On Communication Manager, verify status of the administered CTI link by using the “status aesvcs cti-link” command. Verify that **Service State** is “established” for the relevant CTI link, as shown below.

```
status aesvcs cti-link
```

AE SERVICES CTI LINK STATUS						
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd
1	4	no	AES_21_46	established	15	15
<b>2</b>	<b>4</b>	<b>no</b>	<b>aes_125_72</b>	<b>established</b>	<b>25</b>	<b>25</b>

Verify the registration status of virtual IP softphones by using the “list registered-ip-stations” command. Verify that all softphone extensions from **Section 5.5** are displayed, as shown below.

```
list registered-ip-stations
```

REGISTERED IP STATIONS					
Station Ext or Orig Port	Set Type/ Net Rgn	Prod ID/ Release	TCP Skt	Station IP Address/ Gatekeeper	IP Address
65000	1616	IP_Phone	y	10.32.39.119	
	1	1.302S		10.64.125.62	
65001	1616	IP_Phone	y	10.32.39.109	
	1	1.302S		10.64.125.62	
65002	9620	IP_Phone	y	10.32.39.118	
	1	6.020S		10.64.125.62	
<b>65991</b>	<b>4610</b>	<b>IP_API_A</b>	<b>y</b>	<b>10.64.125.72</b>	
	1	3.2040		10.64.125.32	
<b>65992</b>	<b>4610</b>	<b>IP_API_A</b>	<b>y</b>	<b>10.64.125.72</b>	
	1	3.2040		10.64.125.32	
<b>65993</b>	<b>4610</b>	<b>IP_API_A</b>	<b>y</b>	<b>10.64.125.72</b>	
	1	3.2040		10.64.125.32	
<b>65994</b>	<b>4610</b>	<b>IP_API_A</b>	<b>y</b>	<b>10.64.125.72</b>	
	1	3.2040		10.64.125.32	

## 9.2. Verify Avaya Proactive Contact

Log in to the Linux shell of the Proactive Contact server, and issue the “netstat | grep enservice” command. Verify that there is an entry showing an **ESTABLISHED** connection between Proactive Contact and Encore, as shown below.

tcp	0	0	lzpds4:enservice_ssl	10.32.39.180:49283	ESTABLISHED
tcp	0	0	lzpds4:enservice_ssl	lzpds4:10185	ESTABLISHED

## 9.3. Verify Avaya Aura® Application Enablement Services

On Application Enablement Services, verify status of the TSAPI link by selecting **Status** → **Status and Control** → **TSAPI Service Summary** from the left pane. The **TSAPI Link Details** screen is displayed.

Verify that **Status** is “Talking” for the relevant TSAPI link, as shown below.

**Application Enablement Services**  
Management Console

## 9.4. Verify dvsAnalytics Encore

Start a job on Proactive Contact, and log an agent in to handle and complete a call. Access the Encore web interface by using the URL “http://ip-address/encore” in an Internet browser window, where “ip-address” is the IP address of the Encore server. The **encore** screen is displayed. Click **Login** and log in using the appropriate credentials.

The **encore** screen is updated with a list of call recordings. Verify that there is an entry in the right pane reflecting the last call, with proper values in the relevant fields.

Right click on the entry and select **Play** to listen to the playback. Verify that the screen is updated and that the call recording is played back.

The screenshot displays the Encore PC5-CTI web interface. At the top, the 'encore' logo is on the left, and a 'Welcome A Administrator | 7/24/2012' message is on the right. Below the header, there's a navigation pane on the left with 'Libraries' (System Library, Public Library, Group Library) and 'Shared Playlists' (My Playlists, All Shared Playlists, All Member Playlists). The main area shows a table of call recordings under 'Library: System' and 'Playlist: <None>' with 'Items: 8'. A single entry is visible:

Date	Port	Duration	Reviewed	Tag	Call Name	Extension	DNIS
7/24/2012 12:55:47 PM	65002	00:01:16	<input type="checkbox"/>	<input type="checkbox"/>	01Z141ZD.vx8	65002	9120252167

Below the table is a 'Streaming Player: 01Z141ZD.vx8' section. It shows 'Position: 0:00:11.416' and 'Recording Length: 0:01:14.202'. The video area is black with the text 'Video Unavailable'. To the right of the video is a waveform representing the audio recording. At the bottom, there's a control bar with buttons for play, pause, stop, previous, next, and a volume slider.

## 10. Conclusion

These Application Notes describe the configuration steps required for dvsAnalytics Encore to successfully interoperate with Avaya Proactive Contact with CTI and Avaya Aura® Application Enablement Services. All feature and serviceability test cases were completed with observations noted in **Section 2.2**.
