

Avaya Solution & Interoperability Test Lab

Application Notes for Aiphone IX Series 2 Audio Door Stations (IX-BBT) with Avaya Aura® Communication Manager and Avaya Aura® Session Manager - Issue 1.0

Abstract

These Application Notes describe the configuration steps required to integrate Aiphone IX Series 2 Audio Door Station (IX-BBT) Version 7.00 with Avaya Aura® Communication Manager 10.1 and Avaya Aura® Session Manager 10.1. The Aiphone IX-BBT Audio Door Station, which is part of the Aiphone IX Series 2 Audio Door Stations, was used for the compliance test. Aiphone IX-BBT Audio Door Station is a surface mount, weather resistant audio door station. Aiphone IX-BBT Audio Door Station registers with Avaya Aura® Session Manager as a SIP endpoint.

Readers should pay attention to **Section 2**, in particular the scope of testing as outlined in **Section 2.1** as well as the observations noted in **Section 2.2**, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration steps required to integrate Aiphone IX Series 2 Audio Door Station (IX-BBT) Version 7.00 with Avaya Aura® Communication Manager 10.1 and Avaya Aura® Session Manager 10.1. The Aiphone IX-BBT Audio Door Station, which is part of the Aiphone IX Series 2 Audio Door Stations, was used for the compliance test. Aiphone IX-BBT Audio Door Station is a surface mount, weather resistant audio door station. Aiphone IX-BBT Audio Door Station (IX-BBT) registers with Avaya Aura® Session Manager as a SIP endpoint.

2. General Test Approach and Test Results

The interoperability compliance test included feature and serviceability testing. The feature testing focused on establishing audio calls between Aiphone IX-BBT Audio Door Station, Avaya SIP and H.323 telephones, and the PSTN, and exercising basic telephony features, such as hold/resume, mute/unmute, transfer, conference, call forwarding, and call coverage from an Avaya IP endpoint. Additional telephony features, such as call forward and call coverage, were also verified.

The serviceability testing focused on verifying that the Aiphone IX-BBT Audio Door Station comes back into service after re-connecting the Ethernet cable.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in this DevConnect Application Note included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with this Application Note, the interface between Avaya systems and Aiphone IX-BBT Audio Door Station did not include use of any specific encryption features as requested by Aiphone.

2.1. Interoperability Compliance Testing

Interoperability compliance testing covered the following features and functionality:

- SIP registration of IX-BBT with Session Manager.
- Audio calls between IX-BBT and Avaya SIP and H.323 deskphones with Direct IP Media (Shuffling) enabled and disabled.
- Audio calls between IX-BBT and the PSTN.
- G.711 codec support.
- UDP transport protocol.
- IX-BBT placing, answering, and terminating calls.
- Basic telephony features, including hold/resume, mute/unmute, transfer, and 3-way conference, initiated from an Avaya IP endpoint.
- Proper system recovery after re-establishing IP connectivity to IX-BBT.

2.2. Test Results

All test cases passed with the following observations:

- IX-BBT will auto answer calls placed to them.
- IX-BBT does not support remote door open via DTMF input of Door Release Authorization Authentication Key.
- IX-BBT only supports G.711 codec.

2.3. Support

For technical support of Aiphone IX Series 2 Audio Door Stations, contact Aiphone Technical Support via phone or website.

- Phone: +1 (800) 692-0200
- Web: <https://www.aiphone.com/support/technical-support>

3. Reference Configuration

Figure 1 illustrates a sample configuration with an Avaya SIP-based network. Aiphone IX-BBT Audio Door Station registered with Session Manager and was configured as an Off-PBX Station (OPS) on Communication Manager.

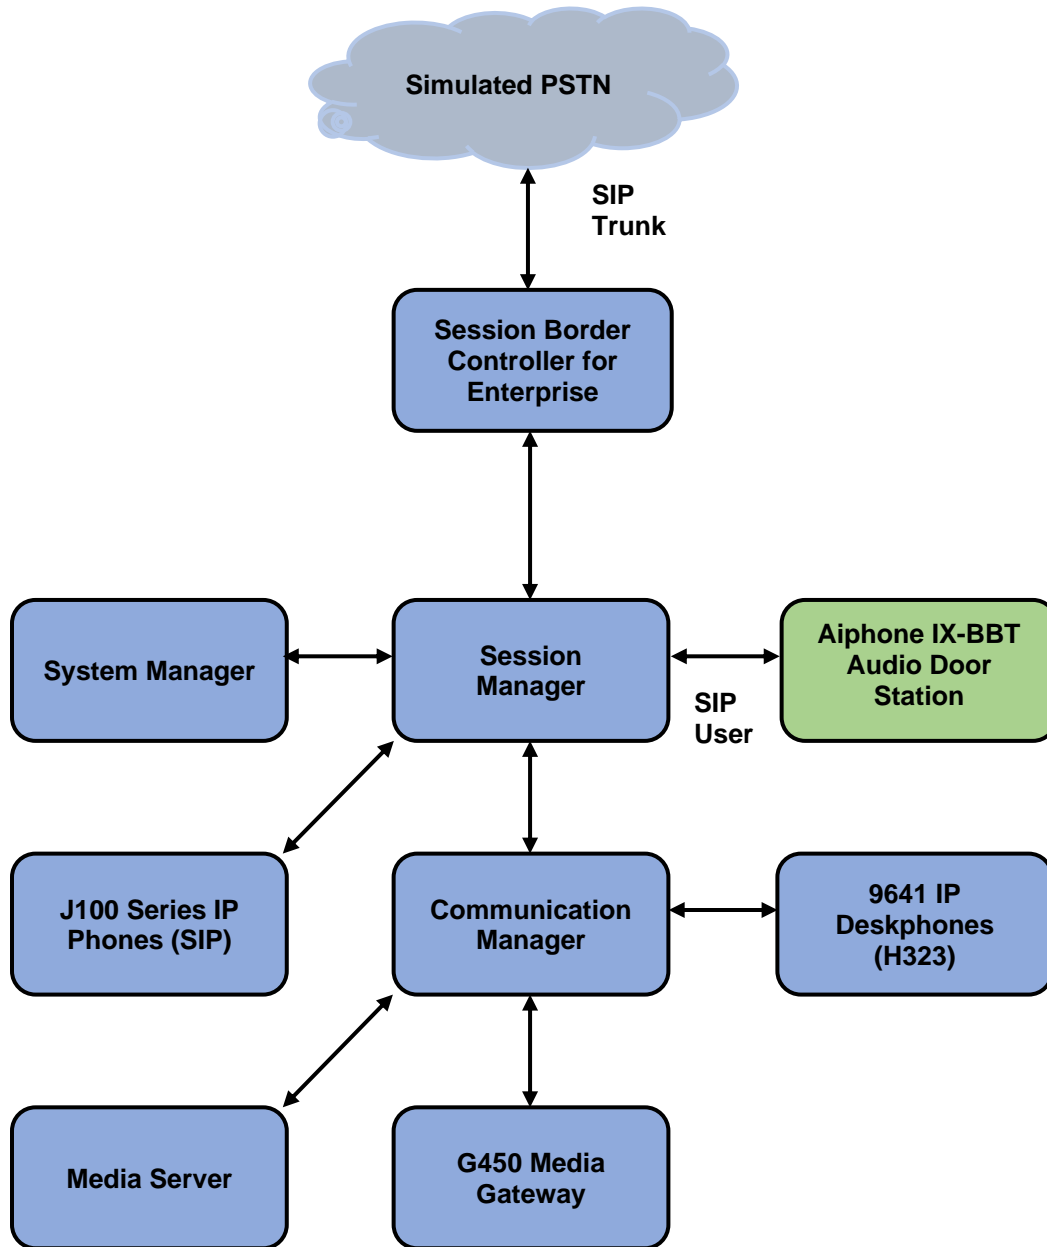

Figure 1: Avaya SIP Telephony Network with Aiphone IX-BBT Audio Door Station

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® Communication Manager	10.1.2.0 FP2 01.0.974.0-27783
Avaya G450 Media Gateway	FW 42.18.0
Avaya Aura® Media Server	10.1.0.125
Avaya Aura® System Manager	10.1.2.0 Feature Pack 2 10.1.2.0.0715476
Avaya Aura® Session Manager	10.1.2.0 Feature Pack 2 10.1.0.02.1012016
Avaya Session Border Controller for Enterprise	10.1.0.0-32-21432
Avaya 96x1 Series IP Deskphones	6.8.5.4 (H.323)
Avaya J100 Series IP Phones	4.1.0.0.9 (SIP)
Aiphone IX-BBT Audio Door Station	7.00

5. Configure Avaya Aura® Communication Manager

This section describes the configuration of a SIP trunk to Session Manager and routing calls to IX-BBT. Administration of Communication Manager was performed using the System Access Terminal (SAT). The following configuration is covered:

- Verify Communication Manager license.
- Administer IP Node Names.
- Administer IP Codec Set.
- Administer IP Network Region.
- Administer SIP Trunk to Session Manager.
- Configure Private Numbering.

5.1. Verify Communication Manager License

Using the SAT, verify that the Off-PBX Telephones (OPS) option is enabled on the **system-parameters customer-options** form. The license file installed on the system controls these options. If a required feature is not enabled, contact an authorized Avaya sales representative.

On **Page 1**, verify that the number of OPS stations allowed in the system is sufficient for the number of SIP endpoints, including IX-BBT Audio Door Stations, that will be deployed.

```
display system-parameters customer-options                               Page 1 of 12
                                OPTIONAL FEATURES

G3 Version: V20                                                         Software Package: Enterprise
Location: 2                                                             System ID (SID): 1
Platform: 28                                                            Module ID (MID): 1

                                USED
Platform Maximum Ports: 48000    108
Maximum Stations: 150            73
Maximum XMOBILE Stations: 36000  0
Maximum Off-PBX Telephones - EC500: 150  0
Maximum Off-PBX Telephones - OPS: 150  42
Maximum Off-PBX Telephones - PBFMC: 150  0
Maximum Off-PBX Telephones - PVFMC: 150  0
Maximum Off-PBX Telephones - SCCAN: 0    0
Maximum Off-PBX Telephones - EMX: 150   0
Maximum Survivable Processors: 313    0

(NOTE: You must logoff & login to effect the permission changes.)
```

5.2. Administer IP Node Names

In the **IP Node Names** form, assign an IP address and host name for Communication Manager (*procr*) and Session Manager (*sm10*). The host names will be used in other configuration screens of Communication Manager.

```
change node-names ip                                     Page 1 of 2
                                                    IP NODE NAMES
      Name                IP Address
aes10                    10.64.110.247
ams10                    10.64.110.214
default                  0.0.0.0
procr                   10.64.110.213
procr6                   ::
sm10                   10.64.110.212

( 6 of 6 administered node-names were displayed )
Use 'list node-names' command to see all the administered node-names
Use 'change node-names ip xxx' to change a node-name 'xxx' or add a node-name
```

5.3. Administer IP Codec Set

In the **IP Codec Set** form, select the audio codec type supported for calls routed over the SIP trunk to IX-BBT. The form is accessed via the **change ip-codec-set 1** command. Note the codec set number since it will be used in the IP Network Region covered in the next section. For the compliance test, the G.711MU codec was verified. The following IP codec set is configured with G.711MU.

Media encryption was enabled for Avaya IP endpoints. IX-BBT wasn't configured to support SRTP, so the *none* option was also included under **Media Encryption**.

```
change ip-codec-set 1                                   Page 1 of 2
                                                    IP MEDIA PARAMETERS
      Codec Set: 1
      Audio          Silence      Frames   Packet
      Codec          Suppression  Per Pkt  Size(ms)
1: G.711MU         n           2       20

2: 10-srtp-aescm256-hmac80
3: none
4:
5:
```

5.4. Administer IP Network Region

In the **IP Network Region** form, the **Authoritative Domain** field is configured to match the domain name configured on Session Manager. In this configuration, the domain name is *avaya.com*. By default, **IP-IP Direct Audio** (shuffling) is enabled to allow audio traffic to be sent directly between IX-BBT and IP endpoints without using media resources in the Avaya G450 Media Gateway or Avaya Media Server. The **IP Network Region** form also specifies the **IP Codec Set** to be used for calls routed over the SIP trunk to Session Manager. This codec set is used when its corresponding network region (i.e., IP Network Region 1) is specified in the SIP signaling group.

```
change ip-network-region 1                                     Page 1 of 20
                                                              IP NETWORK REGION

                                                              RSVP Enabled? n
```

Administer SIP Trunk to Session Manager

Prior to configuring a SIP trunk group for communication with Session Manager, a SIP signaling group must be configured. Configure the **Signaling Group** form as follows:

- Set the **Group Type** field to *sip*.
- Set the **IMS Enabled** field to *n*.
- The **Transport Method** field was set to *tls*.
- Specify the Ethernet processor (*procr*) of Communication Manager and Session Manager (*sm10*) as the two ends of the signaling group in the **Near-end Node Name** field and the **Far-end Node Name** field, respectively. These field values are taken from the **IP Node Names** form in **Section 5.2**.
- Ensure that the TLS port value of *5061* is configured in the **Near-end Listen Port** and the **Far-end Listen Port** fields.
- The preferred codec for the call will be selected from the IP codec set assigned to the IP network region specified in the **Far-end Network Region** field.
- Enter the domain name of Session Manager in the **Far-end Domain** field. In this configuration, the domain name is *avaya.com*.
- The **Direct IP-IP Audio Connections** field was enabled on this form.
- The **DTMF over IP** field should be set to the default value of *rtp-payload*.
- Set **Initial IP-IP Direct Media** field to *y*.

Communication Manager supports DTMF transmission using RFC 2833. The default values for the other fields may be used.

```
display signaling-group 1                               Page 1 of 3

                                Request URI Contents: may-have-extra-digits

```

5.5. Configure Private Numbering

Configure the **Numbering – Private Format** form to send the calling party number to the far-end. Add an entry so that local stations with a 5-digit extension beginning with ‘7’ whose calls are routed over any trunk group, including SIP trunk group 1, have their extension sent.

```

change private-numbering 0
                                Page 1 of 2
                                NUMBERING - PRIVATE FORMAT
Ext  Ext      Trk      Private      Total
Len  Code      Grp(s)     Prefix       Len
5   7
                                5   Total Administered: 1
                                Maximum Entries: 540

```

6. Configure Avaya Aura® Session Manager

This section covers the procedure for adding a SIP user in Session Manager. The configuration covers:

- Launch System Manager
- Set Network Transport Protocol for IX-BBT
- Administer SIP User

Note: It is assumed that basic configuration of Session Manager has already been performed.

6.1. Launch System Manager

Access the System Manager Web interface by using the URL <https://<ip-address>> in an Internet browser window, where <ip-address> is the System Manager IP address. Log in using the appropriate credentials.

Recommended access to System Manager is via FQDN.
[Go to central login for Single Sign-On](#)

If IP address access is your only option, then note that authentication will fail in the following cases:

- First time login with "admin" account
- Expired/Reset passwords

Use the "Change Password" hyperlink on this page to change the password manually, and then login.

Also note that single sign-on between servers in the same security domain is not supported when accessing via IP address.

This system is restricted solely to authorized users for legitimate business purposes only. The actual or attempted unauthorized access, use, or modification of this system is strictly prohibited.

Unauthorized users are subject to company disciplinary procedures and or criminal and civil penalties under state, federal, or other applicable domestic and foreign laws.

The use of this system may be monitored and recorded for administrative and security reasons. Anyone accessing this system expressly consents to such monitoring and recording, and is advised that if it reveals possible evidence of criminal activity, the evidence of such activity may be provided to law enforcement officials.

All users must comply with all corporate instructions regarding the protection of information assets.

User ID:

Password:

[Change Password](#)

Supported Browsers: Firefox (minimum version 93.0), Chrome (minimum version 91.0) or Edge (minimum version 93.0).

6.2. Set Network Transport Protocol for IX-BBT

From the System Manager **Home** screen, select **Elements** → **Routing** → **SIP Entities** and edit the SIP Entity for Session Manager shown below.

The screenshot shows the Avaya Aura System Manager 10.1 interface. The top navigation bar includes 'Users', 'Elements', 'Services', 'Widgets', and 'Shortcuts'. The main content area is titled 'SIP Entity Details' and is divided into two sections: 'General' and 'Monitoring'. The 'General' section contains fields for Name (sm10), IP Address (10.64.110.212), SIP FQDN, Type (Session Manager), Notes, Location (DevConnect), Outbound Proxy, Time Zone (America/Denver), Minimum TLS Version (Use Global Setting), and Credential name. The 'Monitoring' section contains fields for SIP Link Monitoring (Link Monitoring Enabled), Proactive Monitoring Interval (900), Reactive Monitoring Interval (120), and Number of Tries (1). Buttons for 'Commit' and 'Cancel' are visible at the top right of the form.

Scroll down to the **Listen Ports** section and verify that the transport network protocol used by IX-BBT is specified in the list below. For the compliance test, the solution used UDP network transport.

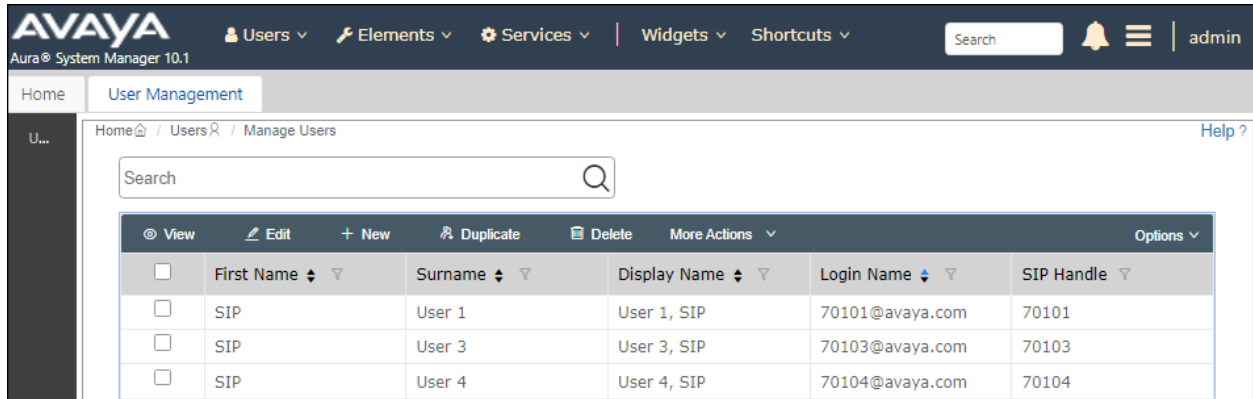

The screenshot shows the 'Listen Ports' section of the Avaya Aura System Manager 10.1 interface. It features a table with 3 items and a 'Filter: Enable' button. The table has columns for Listen Ports, Protocol, Default Domain, Endpoint, and Notes. The data rows are as follows:

Listen Ports	Protocol	Default Domain	Endpoint	Notes
5060	TCP	avaya.com	<input checked="" type="checkbox"/>	
5060	UDP	avaya.com	<input checked="" type="checkbox"/>	
5061	TLS	avaya.com	<input checked="" type="checkbox"/>	

At the bottom of the table, there is a 'Select : All, None' option.

6.3. Administer SIP User

In the subsequent screen (not shown), select **Users** → **User Management** → **Manage Users** to display the **User Management** screen below. Click **New** to add a user.

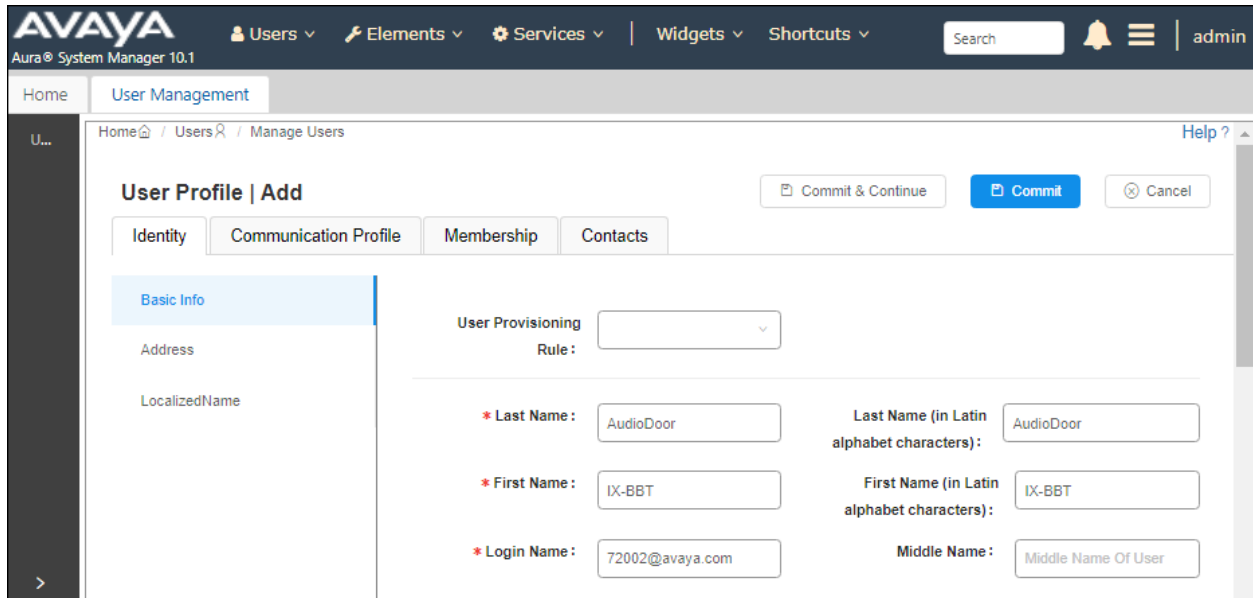

The screenshot shows the Avaya Aura System Manager 10.1 User Management interface. The top navigation bar includes the Avaya logo, menu items for Users, Elements, Services, Widgets, and Shortcuts, a search bar, a notification bell, and the user name 'admin'. The main content area displays a table of users with columns for First Name, Surname, Display Name, Login Name, and SIP Handle. The table contains three rows of user data.

<input type="checkbox"/>	First Name	Surname	Display Name	Login Name	SIP Handle
<input type="checkbox"/>	SIP	User 1	User 1, SIP	70101@avaya.com	70101
<input type="checkbox"/>	SIP	User 3	User 3, SIP	70103@avaya.com	70103
<input type="checkbox"/>	SIP	User 4	User 4, SIP	70104@avaya.com	70104

6.3.1. Identity

The **New User Profile** screen is displayed. Enter desired **Last Name** and **First Name**. For **Login Name**, enter $\langle extension \rangle @ \langle domain \rangle$, where $\langle extension \rangle$ is the desired IX-BBT SIP extension and $\langle domain \rangle$ is the applicable SIP domain name from **Section 0**. Retain the default values in the remaining fields.

The screenshot shows the Avaya Aura System Manager 10.1 User Profile | Add screen. The interface includes a navigation bar with the Avaya logo and menu items for Users, Elements, Services, Widgets, and Shortcuts. The main content area displays the 'User Profile | Add' form with tabs for Identity, Communication Profile, Membership, and Contacts. The 'Basic Info' tab is selected, showing fields for User Provisioning Rule, Last Name, First Name, Login Name, Last Name (in Latin alphabet characters), First Name (in Latin alphabet characters), and Middle Name. The form contains several input fields with pre-filled values.

User Profile | Add

Commit & Continue Commit Cancel

Identity Communication Profile Membership Contacts

Basic Info

Address

LocalizedName

User Provisioning Rule: [Dropdown]

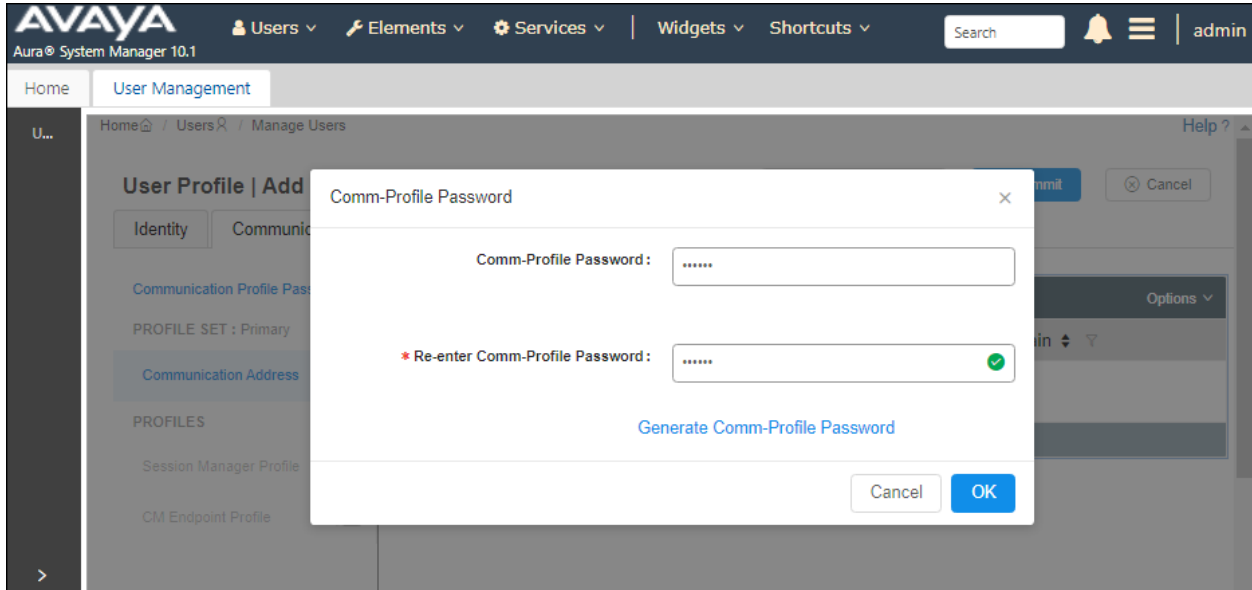

* Last Name: AudioDoor Last Name (in Latin alphabet characters): AudioDoor

* First Name: IX-BBT First Name (in Latin alphabet characters): IX-BBT

* Login Name: 72002@avaya.com Middle Name: Middle Name Of User

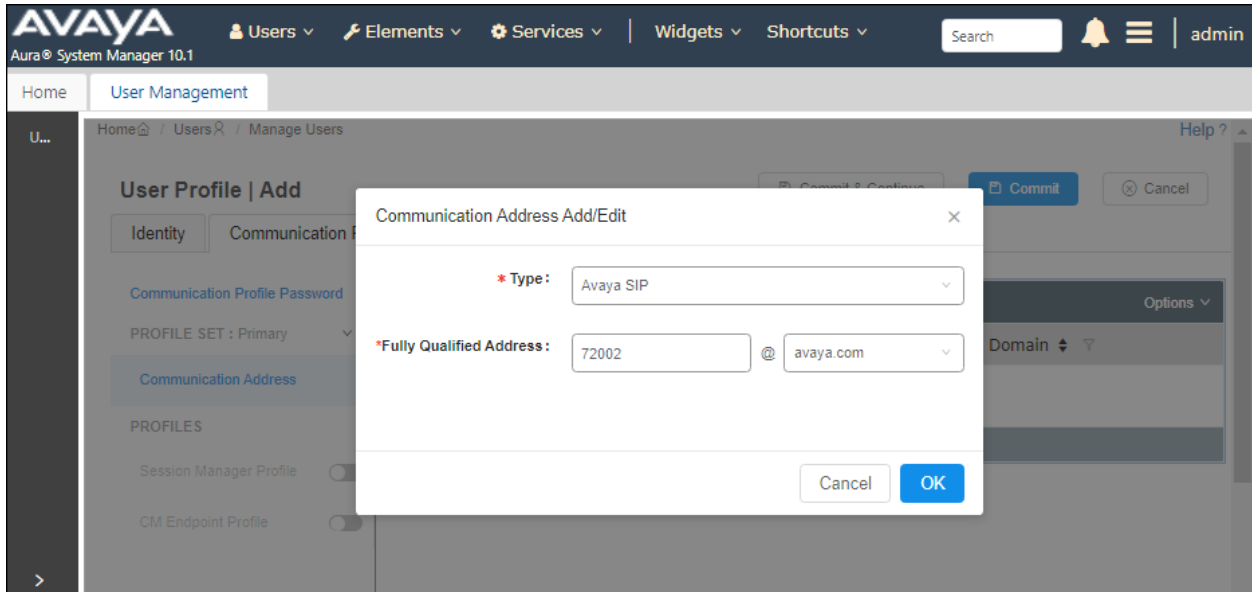

6.3.2. Communication Profile Password

Select the **Communication Profile** tab. Next, click on **Communication Profile Password**. For **Comm-Profile Password** and **Re-enter Comm-Profile Password**, enter the desired password for the SIP user to use for registration. Click **OK**.

6.3.3. Communication Address

Click on **Communication Address** and then click **New** to add a new entry. The **Communication Address Add/Edit** dialog box is displayed as shown below. For **Type**, retain *Avaya SIP*. For **Fully Qualified Address**, enter the SIP user extension and select the domain name to match the login name from **Section 6.3.1**. Click **OK**.

6.3.4. Session Manager Profile

Click on toggle button by **Session Manager Profile**. For **Primary Session Manager**, **Origination Sequence** and **Termination Sequence** (Application Sequences), and **Home Location**, select the values corresponding to the applicable Session Manager and Communication Manager. Retain the default values in the remaining fields.

The screenshot shows the 'User Profile | Add' form in the Avaya Aura System Manager 10.1 interface. The 'Communication Profile Password' section is active, showing 'PROFILE SET : Primary' and 'Communication Address'. The 'SIP Registration' section includes fields for 'Primary Session Manager' (sm10), 'Secondary Session Manager' (Start typing...), 'Survivability Server' (Start typing...), 'Max. Simultaneous Devices' (Select), and 'Block New Registration When Maximum Registrations Active?'. The 'Application Sequences' section shows 'Origination Sequence' and 'Termination Sequence' both set to 'cm10 App Seq'.

Scroll down to the **Call Routing Settings** section to configure the **Home Location**.

The screenshot shows the 'Call Routing Settings' section of the form. It includes a field for 'Home Location' set to 'DevConnect' and a dropdown for 'Conference Factory Set' set to 'Select'.

6.3.5. CM Endpoint Profile

Click on the toggle button by **CM Endpoint Profile**. For **System**, select the value corresponding to the applicable Communication Manager. For **Extension**, enter the SIP user extension from **Section 6.3.1**. For **Template**, select *9641SIP_DEFAULT_CM_10_1*. For **Port**, click and select *IP*. Retain the default values in the remaining fields.

The screenshot displays the Avaya Aura System Manager 10.1 interface. The top navigation bar includes the Avaya logo, 'Users', 'Elements', 'Services', 'Widgets', and 'Shortcuts' menus, a search bar, and a user profile icon labeled 'admin'. The main content area is titled 'User Profile | Add' and features tabs for 'Identity', 'Communication Profile', 'Membership', and 'Contacts'. The 'Communication Profile' tab is active. On the left, a sidebar shows 'Communication Profile Password' (PROFILE SET: Primary), 'Communication Address', and 'PROFILES' with 'Session Manager Profile' and 'CM Endpoint Profile' (checked) toggle switches. The main form fields include: '* System' (cm10), '* Profile Type' (Endpoint), 'Use Existing Endpoints' (unchecked), '* Extension' (72002), '* Template' (9641SIP_DEFAULT_CM_10_1), '* Set Type' (9641SIP), 'Security Code' (Enter Security Code), 'Port' (IP), 'Voice Mail Number', 'Preferred Handle' (Select), 'Calculate Route Pattern' (unchecked), 'SIP Trunk' (aar), 'SIP URI' (Select), 'Delete on Unassign from User or on Delete User' (checked), and 'Override Endpoint Name and Localized Name' (checked). A 'Commit & Continue' button, a blue 'Commit' button, and a 'Cancel' button are located at the top right of the form area.

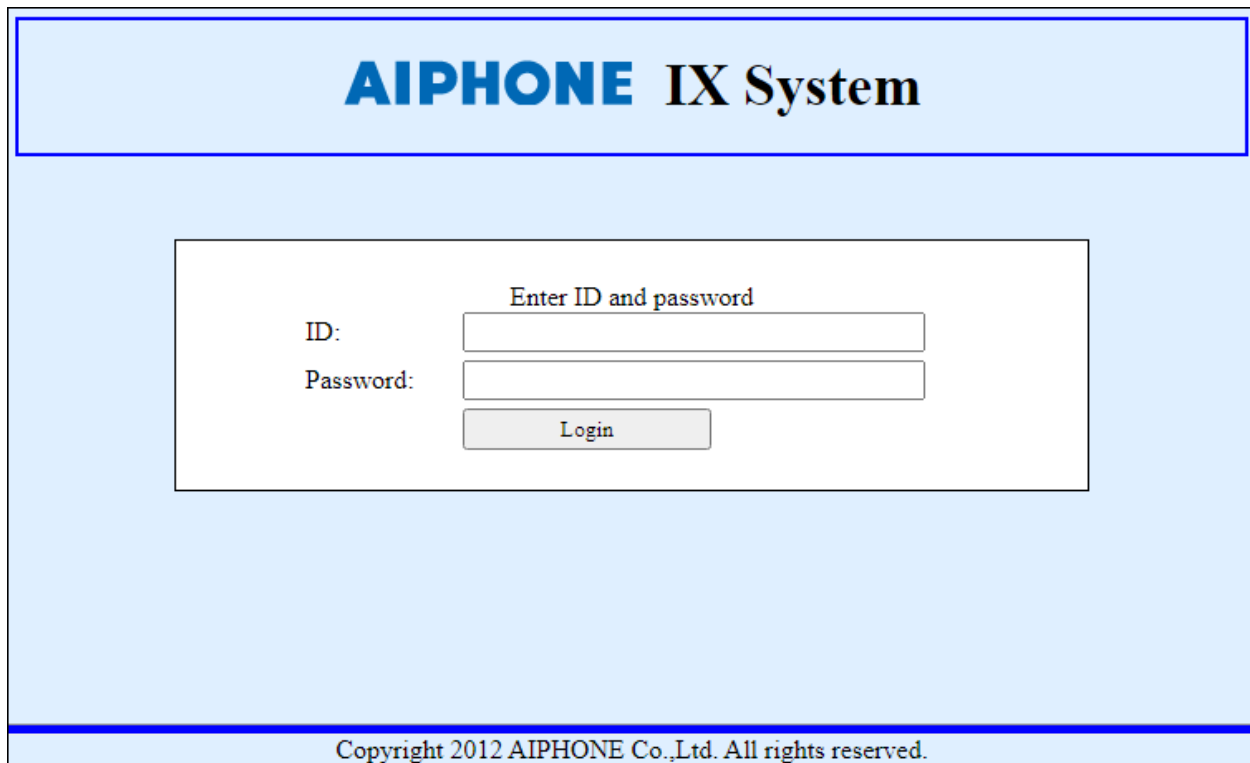

7. Configure Aiphone IX-BBT Audio Door Station

This section provides the procedure for configuring IX-BBT to provide SIP connectivity to Session Manager. Configuration of IX-BBT is performed via Aiphone IX System web interface.

- Log into Aiphone IX System Web Interface
- Administer Station Information
- Administer SIP Parameters
- Administer Audio Settings
- Administer Call Settings

7.1. Log into Aiphone IX System Web Interface

Access the Aiphone IX System Web Interface by using the URL <https://<ip-address>/webset.cgi?login> in an Internet browser, where <ip-address> is the IX-BBT IP address. Select language (not shown) and log in using the appropriate credentials.

AIPHONE IX System

Enter ID and password

7.2. Administer Station Information

Navigate to **Station Information** → **Identification** and set the **Number** to the IX-BBT SIP extension (e.g., 72002). Input an appropriate **Name**.

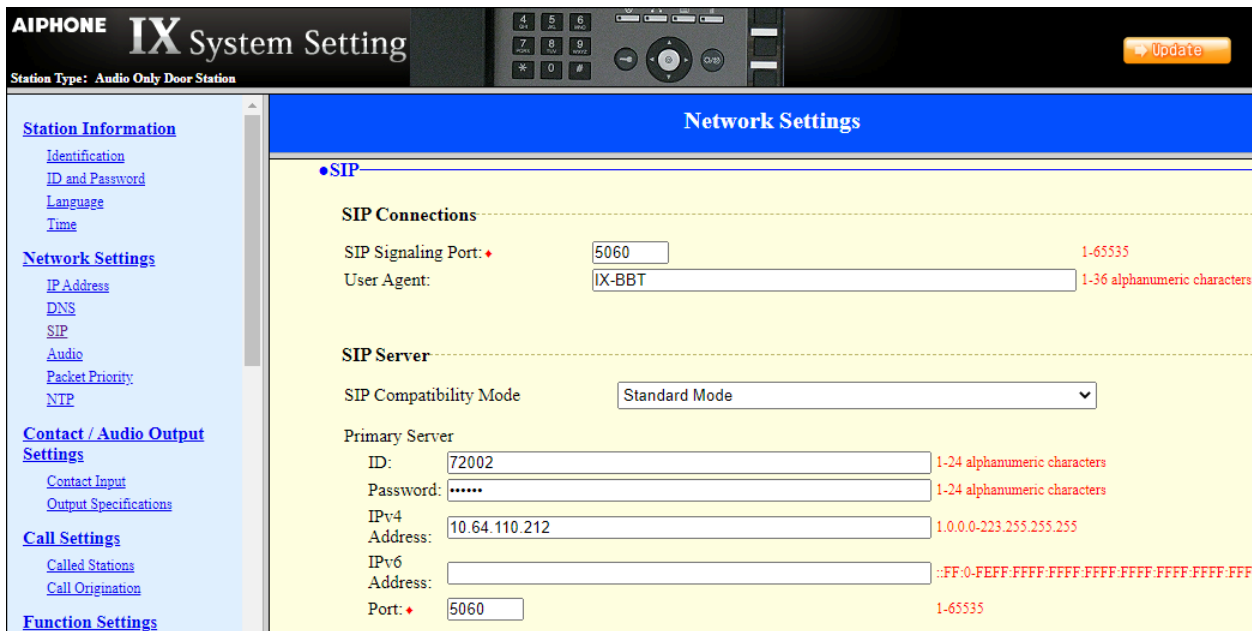

The screenshot displays the AIPHONE IX System Setting web interface. At the top, it shows 'AIPHONE IX System Setting' and 'Station Type: Audio Only Door Station'. A navigation menu on the left includes 'Station Information' (with sub-items: Identification, ID and Password, Language, Time) and 'Network Settings' (with sub-items: IP Address, DNS, SIP, Audio, Packet Priority, NTP). The main content area is titled 'Station Information' and contains a section for 'Identification'. This section includes three fields: 'Number' (containing '72002'), 'Name' (containing 'IX-BBT'), and 'Location' (empty). Red text next to each field indicates requirements: '3-5 digits' for the number, and '1-24 alphanumeric characters' for both the name and location. A red asterisk and the text 'Required Settings' are visible in the top right of the main content area. An 'Update' button is located in the top right corner of the interface.

7.3. Administer SIP Parameters

Navigate to **Network Settings** → **SIP** from the left pane and configure the following parameters:

- **SIP Signaling Port:** Set to *5060*.
- **User Agent:** Enter desired value (e.g., *IX-BBT*).
- **ID:** Set to SIP extension (e.g., *72002*) from **Section 6.3.1**.
- **Password:** Enter SIP password from **Section 6.3.2**.
- **IPv4 Address:** Set to signaling IP address of Session Manager (e.g., *10.64.110.212*).
- **Port:** Set to *5060*.

Click **Update** to save changes.

7.4. Administer Audio Settings

Navigate to **Network Settings** → **Audio** in the left pane and set **Audio Codec** to select *G.711 (u-law)*.

The screenshot displays the AIPHONE IX System Setting web interface. The top navigation bar includes the product name and a keypad. The left sidebar contains a menu with categories: Station Information, Network Settings, Contact / Audio Output Settings, Call Settings, and Function Settings. The main content area is titled 'Network Settings' and features a sub-section for 'Audio'. This section includes several configuration fields: 'Audio CODEC' with radio buttons for G.711(μ-law) (selected) and G.711(A-law); 'Audio RTP Transmission Interval [msec]' set to 20; 'RTP Idle Detection Time [sec]' set to 10; 'SIP Channel' settings for RTP Start and End ports (20000-1-65534 and 21000-1-65535); 'ONVIF Transmit Channel' settings for RTP Start and End ports (22000-1-65534 and 23000-1-65535); and 'Audio Buffer' settings for Packets Buffered at Audio Start (1) and Maximum Packets Buffered (3). Red text provides warnings about port ranges and buffer requirements.

Setting	Value	Notes
Audio CODEC	<input checked="" type="radio"/> G.711(μ-law) <input type="radio"/> G.711(A-law)	
Audio RTP Transmission Interval [msec]	20	This setting is ignored when transmitting to multiple stations (paging, etc.)
RTP Idle Detection Time [sec]	10	10-180sec
SIP Channel		
RTP Start Port	20000	1-65534
RTP End Port	21000	1-65535
ONVIF Transmit Channel		
RTP Start Port	22000	1-65534
RTP End Port	23000	1-65535
Audio Buffer		
Packets Buffered at Audio Start	1	
Maximum Packets Buffered	3	Maximum Packet Buffer must be larger than Audio Start Buffer.

7.5. Administer Call Settings

Navigate to **Call Settings** in the left pane. In the **Called Stations** section, add an entry that specifies the number that should be dialed when the call button is pressed. Set the **Number** to the called number (e.g., 70103) and set the **IPv4 Address** to the signaling IP address of Session Manager (e.g., 10.64.110.212).

The screenshot shows the AIPHONE IX System Setting web interface. The top navigation bar includes the product name and a virtual keypad. The left sidebar contains a menu with categories: Station Information, Network Settings, Contact / Audio Output Settings, Call Settings, and Function Settings. The 'Call Settings' section is active, showing a 'Called Stations' table under the heading 'Call Button Assignment'.

8. Verification Steps

This section provides the tests that can be performed to verify proper configuration of Communication Manager, Session Manager, and Aiphone IX-BBT Audio Door Station.

1. Verify that IX-BBT has successfully registered with Session Manager. In System Manager, navigate to **Elements** → **Session Manager** → **System Status** → **User Registrations** to check the registration status as shown below.

	Details	Address	First Name	Last Name	Actual Location	IP Address	Policy	Shared Control	Simult. Devices	AST Device	Registered					
											Prim	Sec	3rd	4th	Surv	Visiting
<input type="checkbox"/>	Show	72004@avaya.com	IX-RS-BT	AudioDoor	---	10.64.10.78	fixed	<input type="checkbox"/>	1/1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
<input type="checkbox"/>	Show	72003@avaya.com	IX-SS-2GT	AudioDoor	---	10.64.10.77	fixed	<input type="checkbox"/>	1/1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
<input type="checkbox"/>	Show	72002@avaya.com	IX-BBT	AudioDoor	---	10.64.10.76	fixed	<input type="checkbox"/>	1/1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
<input type="checkbox"/>	Show	72001@avaya.com	IX-BB	AudioDoor	---	10.64.10.75	fixed	<input type="checkbox"/>	1/1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

2. Establish inbound and outbound calls to IX-BBT with Avaya SIP and/or Avaya H.323 endpoints and verify two-way audio.

9. Conclusion

These Application Notes describe the administration steps required to integrate Aiphone IX Series 2 Audio Door Stations (IX-BBT) with Avaya Aura® Communication Manager and Avaya Aura® Session Manager. The Aiphone IX-BBT Audio Door Station successfully registered with Avaya Aura® Session Manager as a SIP endpoint and audio calls were verified. All test cases passed with observations noted in **Section 2.2**.
