

Avaya Solution & Interoperability Test Lab

Application Notes for Configuring FaxCore 2007 Fax Server with Avaya Communication Manager via H.323 - Issue 1.0

Abstract

These Application Notes describe the procedures for configuring the FaxCore 2007 fax server with Avaya Communication Manager using an H.323 trunk.

FaxCore 2007 is a software based fax server that sends and receives fax calls over an IP network. In the tested configuration, Avaya Communication Manager directs fax calls to/from FaxCore 2007 fax server via an H.323 trunk established across the IP network.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the procedures for configuring FaxCore 2007 with Avaya Communication Manager using an H.323 trunk.

FaxCore 2007 is a software based fax server that sends and receives fax calls over an IP network. FaxCore 2007 includes the Brooktrout SR140 T.38 Fax over Internet Protocol (FoIP) driver from Dialogic. In the tested configuration, Avaya Communication Manager directs fax calls to/from FaxCore 2007 via an H.323 trunk established across the IP network.

1.1. Interoperability Compliance Testing

The compliance test tested interoperability between FaxCore 2007 and Avaya Communication Manager by making intra-site and inter-site fax calls to and from FaxCore 2007 servers that are connected to the Avaya Communication Managers via H.323 trunks (see **Section 2** for detailed configuration). Specifically following fax operations were tested in the setup for the compliance test:

- Fax from FaxCore 2007 server to/from fax machine at local site
- Fax from FaxCore 2007 server to/from fax machine at remote site
- Fax from FaxCore 2007 server to/from FaxCore 2007 server at remote site

In addition, the inter-site calls were tested by using both an H.323 trunk and an ISDN-PRI trunk between sites.

Faxes were sent with various page lengths, and resolutions. For performance testing, a large number of 2-page faxes were continuously sent between the two FaxCore 2007 servers. Serviceability testing included verifying proper operation/recovery from failed cables, unavailable resources, Avaya Communication Manager restarts and FaxCore 2007 server restarts. Fax calls were also tested with different Avaya Media Gateway media resources to process the fax data. This included the TN2302AP IP Media Processor (MedPro) circuit pack, the TN2602AP IP Media Processor circuit pack and the integrated Voice over Internet Protocol (VoIP) engine of the Avaya G700 Media Gateway.

1.2. Support

Technical support for FaxCore 2007 can be obtained by contacting FaxCore at

- Phone: (720) 870-2900 x302
- Email: support@faxcore.com
- Web: <http://www.faxcore.com>

2. Configuration

Figure 1 illustrates the configuration used in these Application Notes. In the sample configuration, two sites are connected via an H.323 trunk, as well as by an ISDN-PRI trunk. Faxes can be sent between the two sites using either of these two trunks.

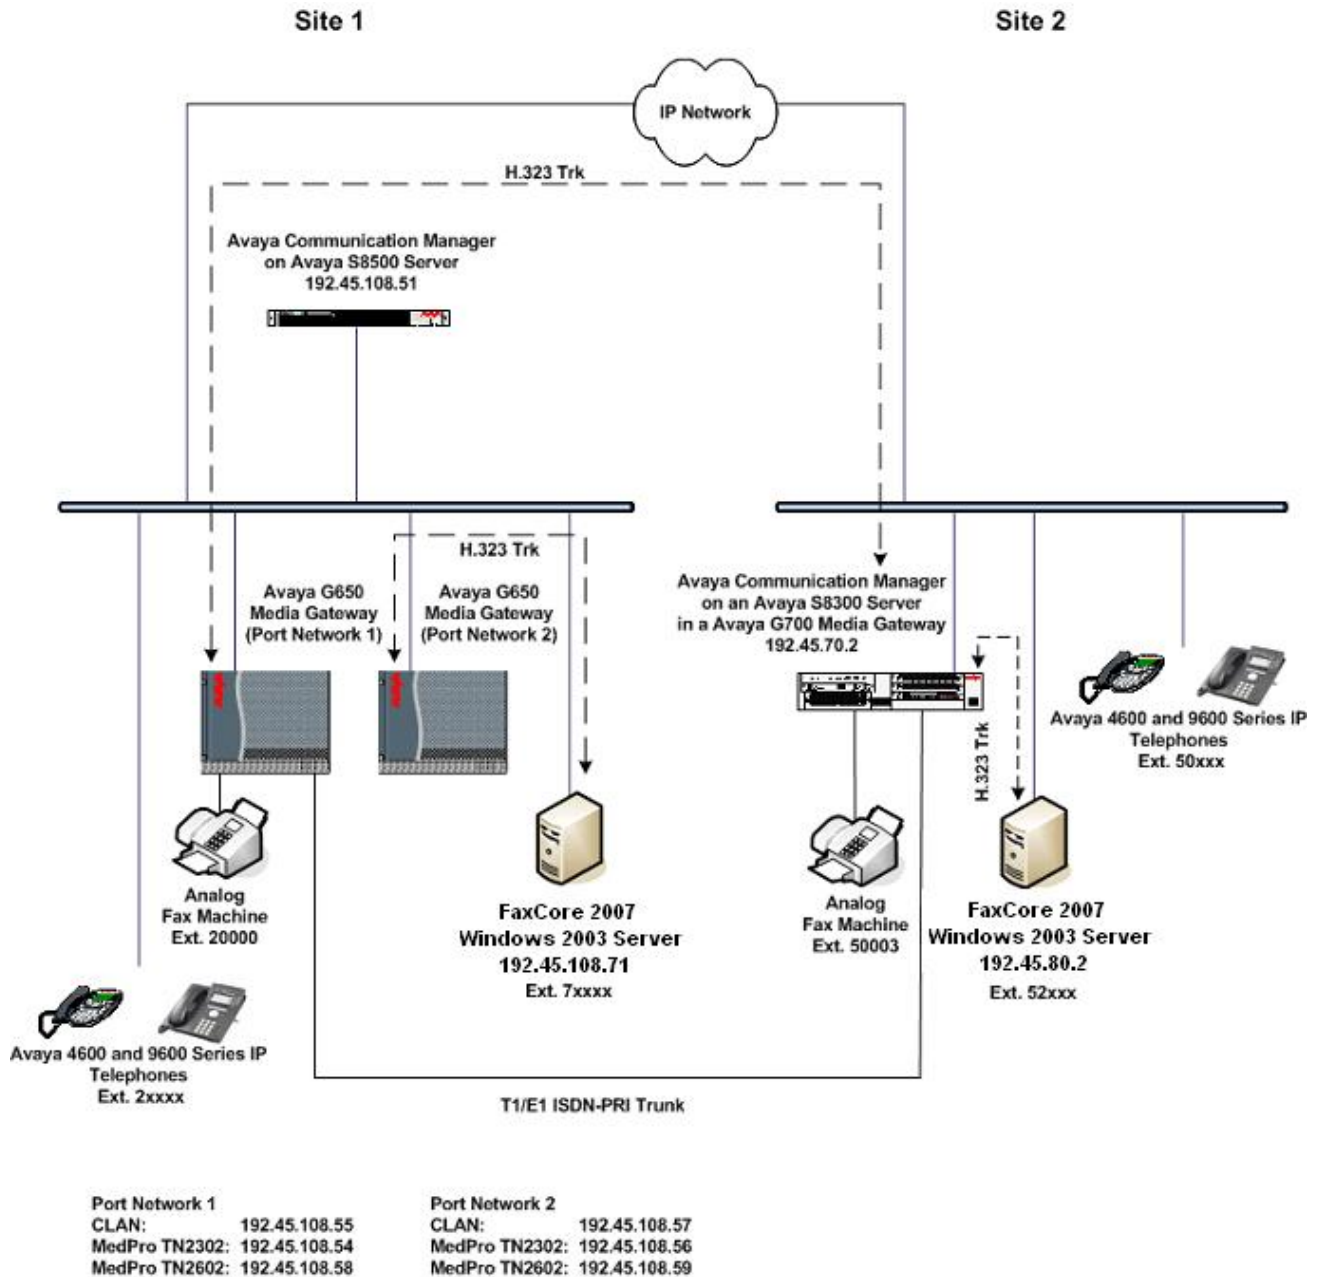

Figure 1: FaxCore 2007 Test Configuration

Site 1 has an Avaya S8500 Server running Avaya Communication Manager with two Avaya G650 Media Gateways. Each media gateway is configured as a separate port network in separate IP network regions. FaxCore 2007 at this site is running on a FaxCore Mini Appliance (that bundles FaxCore 2007 and all supporting software on a packaged Windows 2003 Server PC) and communicates to Avaya Communication Manager via an H.323 trunk whose signaling is terminated on a CLAN circuit pack in port network 2. The media resources required by the trunk are provided by the Media Processor (MedPro) circuit pack. Two versions of the MedPro circuit pack were tested in this configuration: TN2302AP and TN2602AP. Endpoints at this site include Avaya 4600 Series IP Telephones (with H.323 firmware), Avaya 9600 Series IP Telephones (with H.323 firmware), and a fax machine.

Site 2 has an Avaya S8300 Server running Avaya Communication Manager in an Avaya G700 Media Gateway. FaxCore 2007 at this site is also running on a FaxCore Mini Appliance and communicates to Avaya Communication Manager via an H.323 trunk. On the Avaya G700 Media Gateway, the signaling and media resources needed to support the H.323 trunk are integrated directly on the media gateway processor. Endpoints at this site include Avaya 4600 Series IP Telephones (with H.323 firmware), Avaya 9600 Series IP Telephones (with H.323 firmware), and a fax machine.

Although the IP telephones are not involved in the faxing operations, they are present in the configuration to verify VoIP telephone calls are not affected by the FoIP faxing operations and vice versa.

Outbound fax calls originating from FaxCore 2007 server are sent to Avaya Communication Manager via the H.323 trunk. Based on the dialed digits, Avaya Communication Manager will direct the call to the local fax machine, the ISDN-PRI trunk or H.323 trunk to reach the remote site. Inbound fax calls terminating to FaxCore 2007 are first received by Avaya Communication Manager from the local fax machine or from across either trunk connected to the remote site. Avaya Communication Manager then directs the call over the H.323 trunk that connects to the local FaxCore 2007 server.

3. Equipment and Software Validated

The following equipment and software/firmware were used for the sample configuration provided:

Equipment	Software/Firmware
Avaya S8500 Server (at Site1)	Avaya Communication Manager 5.1.0 with Service Pack (01.0.414.3-15962)
Avaya G650 Media Gateway (at Site 1) - 2 CLANs - 2 MedPros – TN2302 - 2 MedPros – TN2602	TN799DP - HW01 FW26 TN2302AP - HW20 FW118 TN2602AP - HW02 FW040
Avaya S8300 Server (at Site 2)	Avaya Communication Manager 5.1.1 with Service Pack (01.1.415.1-16402)
Avaya G700 Media Gateway (at Site 2)	28.18.0
Avaya 4600 Series IP Telephones (H.323)	2.8.3
Avaya 9600 Series IP Telephones (H.323) - Avaya one-X Deskphone Edition	1.5
Analog Telephones	-
Analog Fax Machines	-
FaxCore 2007 on Mini Appliance (Windows 2003 Server SP2)	Release 101008
Dialogic Brooktrout SR140 Config Tool Boston Bfv API Boston Driver Boston SDK Boot Rom	5.4.1 Build 14 v5.4.01 (Build 14) v.5.4.00 v5.2.01 (Build 14) 3.2.1B29

4. Configure Avaya Communication Manager

This section describes the Avaya Communication Manager configuration necessary to interoperate with FaxCore 2007. It focuses on the configuration of the H.323 trunk between Avaya Communication Manager and FaxCore 2007. All other components are assumed to be in place and previously configured, including the H.323 and ISDN-PRI trunks that connect both sites.

The examples shown in this section refer to site 1. Unless specified otherwise, these same steps also apply to site 2 using values appropriate for site 2 from **Figure 1**.

The configuration of Avaya Communication Manager was performed using the System Access Terminal (SAT). After the completion of the configuration, perform a **save translation** command to make the changes permanent.

Step	Description
1.	<p>IP Interfaces Use the list ip-interface all command to identify which IP interfaces are located in which network region. The example below shows the IP interfaces used in the compliance test. All interfaces in cabinet 01 (port network 1) as indicated in the Slot field are in IP network region 1 as indicated in the Net Rgn field. These interfaces are highlighted below. Testing with the TN2302 and TN2602 circuit packs were done separately. When testing with the TN2302, the TN2602 was disabled (turned off) and vice versa as indicated in the ON field.</p> <pre data-bbox="316 1075 1399 1570"> list ip-interface all IP INTERFACES ON Type Slot Code Sfx Node Name/ Subnet Mask Gateway Address Net ----- ----- ----- ----- ----- ----- ----- ----- y MEDPRO 01A02 TN2302 MEDPRO1A 255.255.255.0 192.45.108.1 1 n 192.45.108.54 y C-LAN 01A03 TN799 D CLAN1A 255.255.255.0 192.45.108.1 1 n 192.45.108.55 y MEDPRO 02A02 TN2302 MEDPRO2A 255.255.255.0 192.45.108.1 2 n 192.45.108.56 y C-LAN 02A03 TN799 D CLAN2A 255.255.255.0 192.45.108.1 2 n 192.45.108.57 n MEDPRO 01A04 TN2602 MEDPRO1A-2 255.255.255.0 192.45.108.1 1 n 192.45.108.58 n MEDPRO 02A04 TN2602 MEDPRO2A-2 255.255.255.0 192.45.108.1 2 n 192.45.108.59 </pre>

Step	Description
2.	<p>IP Network Region – Region 1</p> <p>The configuration of the IP network regions (Steps 2 – 5) is assumed to already be in place and is included here for clarity. At site 1, the Avaya S8500 Server, the Avaya G650 Media Gateway comprising port network 1 and all IP endpoints were located in IP network region 1 using the parameters described below. Use the display ip-network-region command to view these settings. The example below shows the values used for the compliance test.</p> <ul style="list-style-type: none"> ▪ A descriptive name was entered for the Name field. ▪ IP-IP Direct Audio (shuffling) was enabled to allow audio traffic to be sent directly between IP endpoints without using media resources in the Avaya Media Gateway. This was done for both intra-region and inter-region IP-IP Direct Audio. This is the default setting. Shuffling can be further restricted at the trunk level on the Signaling Group form. ▪ The Codec Set field was set to the IP codec set to be used for calls within this IP network region. In this case, IP codec set 1 was selected. ▪ The default values were used for all other fields. <p>At site 2, all IP components were located in IP network region 1 and the IP network region was configured in the same manner as shown below.</p> <pre style="border: 1px solid black; padding: 10px;"> display ip-network-region 1 Page 1 of 19 IP NETWORK REGION Region: 1 Location: Authoritative Domain: Name: PN1 MEDIA PARAMETERS Intra-region IP-IP Direct Audio: yes Codec Set: 1 Inter-region IP-IP Direct Audio: yes UDP Port Min: 2048 IP Audio Hairpinning? n UDP Port Max: 3329 DIFFSERV/TOS PARAMETERS RTCP Reporting Enabled? y Call Control PHB Value: 46 RTCP MONITOR SERVER PARAMETERS Audio PHB Value: 46 Use Default Server Parameters? y Video PHB Value: 26 802.1P/Q PARAMETERS Call Control 802.1p Priority: 6 Audio 802.1p Priority: 6 Video 802.1p Priority: 5 AUDIO RESOURCE RESERVATION PARAMETERS H.323 IP ENDPOINTS RSVP Enabled? n H.323 Link Bounce Recovery? y Idle Traffic Interval (sec): 20 Keep-Alive Interval (sec): 5 Keep-Alive Count: 5 </pre>

Step	Description
3.	<p>IP Network Region 1 – Continued</p> <p>On Page 3, codec sets are defined for inter-region calls. In the case of the compliance test at site 1, calls from IP network region 1 (src rgn 1) to IP network region 2 (dst rgn 2) used codec set 1. The default values were used for all other fields. At site 2, only one IP network region exists so no inter-region settings were required.</p> <pre data-bbox="316 403 1399 646"> display ip-network-region 1 Page 3 of 19 Inter Network Region Connection Management src dst codec direct WAN-BW-limits Video Intervening Dyn rgn rgn set WAN Units Total Norm Prio Shr Regions CAC IGAR AGL 1 1 1 1 2 1 y NoLimit n all 1 3 3 y NoLimit n all </pre>
4.	<p>IP Network Region – Region 2</p> <p>At site 1, IP network region 2 was created in a similar manner as IP network region 1 shown in Step 2 but with a different name.</p> <pre data-bbox="316 835 1399 1402"> change ip-network-region 2 Page 1 of 19 IP NETWORK REGION Region: 2 Location: Authoritative Domain: Name: PN2 MEDIA PARAMETERS Intra-region IP-IP Direct Audio: yes Codec Set: 1 Inter-region IP-IP Direct Audio: yes UDP Port Min: 2048 IP Audio Hairpinning? n UDP Port Max: 3329 DIFFSERV/TOS PARAMETERS RTCP Reporting Enabled? y Call Control PHB Value: 46 RTCP MONITOR SERVER PARAMETERS Audio PHB Value: 46 Use Default Server Parameters? y Video PHB Value: 26 802.1P/Q PARAMETERS Call Control 802.1p Priority: 6 Audio 802.1p Priority: 6 Video 802.1p Priority: 5 AUDIO RESOURCE RESERVATION PARAMETERS H.323 IP ENDPOINTS RSVP Enabled? n H.323 Link Bounce Recovery? y Idle Traffic Interval (sec): 20 Keep-Alive Interval (sec): 5 Keep-Alive Count: 5 </pre>
5.	<p>IP network region – Port Network 2</p> <p>The inter-region codec setting was created similarly to Step 3.</p> <pre data-bbox="316 1554 1399 1785"> display ip-network-region 2 Page 3 of 19 Inter Network Region Connection Management src dst codec direct WAN-BW-limits Video Intervening Dyn rgn rgn set WAN Units Total Norm Prio Shr Regions CAC IGAR AGL 2 1 1 y NoLimit n all 2 2 1 </pre>

Step	Description
<p>6.</p>	<p>IP Node Names</p> <p>Use the change node-names ip command to create a node name that maps to the FaxCore 2007 server IP address. This node name is used in the configuration of the H.323 trunk signaling group in Step 10. The example below shows the entry on the Avaya Communication Manager at site 1.</p> <pre data-bbox="316 405 1401 787"> change node-names ip Page 1 of 2 IP NODE NAMES Name IP Address CLAN1A 192.45.108.55 CLAN2A 192.45.108.57 CMnorth 192.45.70.2 MEDPRO1A 192.45.108.54 MEDPRO1A-2 192.45.108.58 MEDPRO2A 192.45.108.56 MEDPRO2A-2 192.45.108.59 FaxCore 192.45.108.71 SES 192.45.108.50 default 0.0.0.0 procr 192.45.108.51 </pre>
<p>7.</p>	<p>IP Network Map</p> <p>If the FaxCore 2007 server is to be located in an IP network region other than the default region of 1, then the region is assigned using the change ip-network-map command. In the case of the compliance test, the FaxCore 2007 server IP address at site 1 is assigned to IP network region 2 as shown in the example below. At site 2, the FaxCore 2007 server is located in the default IP network region 1, so it does not require an IP address map entry.</p> <pre data-bbox="316 1119 1385 1339"> change ip-network-map Page 1 of 32 IP ADDRESS MAPPING From IP Address (To IP Address Subnet Emergency 192.45 .108.71 192.45 .108.71 or Mask) Region VLAN Location 2 n Extension n </pre>

Step	Description
<p>8.</p>	<p>Codecs Use the change ip-codec-set command to verify that G.711MU or G.711A is contained in the codec list. The example below shows the value used in the compliance test.</p> <pre data-bbox="316 367 1421 661"> display ip-codec-set 1 Page 1 of 2 IP Codec Set Codec Set: 1 Audio Silence Frames Packet Codec Suppression Per Pkt Size(ms) 1: G.711MU n 2 20 2: </pre>
<p>9.</p>	<p>Fax On Page 2, set the FAX Mode field to <i>t.38-standard</i>. This is necessary to support the FaxCore 2007 server assigned to IP network region 2. The Modem Mode field should be set to <i>off</i>.</p> <pre data-bbox="316 871 1421 1228"> change ip-codec-set 1 Page 2 of 2 IP Codec Set Allow Direct-IP Multimedia? n FAX Mode Redundancy Modem t.38-standard 0 TDD/TTY off 0 Clear-channel US 3 n 0 </pre>

Step	Description
10.	<p>Signaling Group</p> <p>Use the add signaling-group command to create a signaling group for use by the H.323 trunk to the FaxCore 2007 server. For the compliance test at site 1, signaling group 3 was configured using the parameters highlighted below. Default values may be used for all other fields.</p> <ul style="list-style-type: none"> ▪ Set the Group Type to <i>h.323</i>. ▪ The Trunk Group for Channel Selection is left blank until the trunk group is created. It will be updated later. ▪ Set the Near-end Node Name to the node name that maps to the IP address of the CLAN circuit pack used to connect to the FaxCore 2007 server. Node names are defined using the change node-names ip command. For site 2, this node name would map to the IP address of the Avaya S8300 Server (<i>procr</i>). ▪ Set the Far-end Node Name to the node name that maps to the IP address of the FaxCore 2007 server configured in Step 6. ▪ Set the Near-end Listen Port and Far-end Listen Port to <i>1720</i>. ▪ Set the Far-end Network Region to the IP network region which contains the FaxCore 2007 server. ▪ Set the Direct IP-IP Audio Connections field to <i>y</i>. This setting enables media shuffling on the trunk level (see Step 2 on IP-IP Direct Audio). ▪ The default values were used for all other fields. <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <pre> add signaling-group 3 Page 1 of 5 SIGNALING GROUP Group Number: 3 Group Type: h.323 Remote Office? n Max number of NCA TSC: 0 SBS? n Max number of CA TSC: 0 IP Video? n Trunk Group for NCA TSC: Trunk Group for Channel Selection: TSC Supplementary Service Protocol: a T303 Timer(sec): 10 Near-end Node Name: CLAN2A Far-end Node Name: FaxCore Near-end Listen Port: 1720 Far-end Listen Port: 1720 Far-end Network Region: 2 LRQ Required? n Calls Share IP Signaling Connection? n RRQ Required? n Bypass If IP Threshold Exceeded? n H.235 Annex H Required? n DTMF over IP: out-of-band Direct IP-IP Audio Connections? y Link Loss Delay Timer(sec): 90 IP Audio Hairpinning? n Enable Layer 3 Test? n Interworking Message: PROgress H.323 Outgoing Direct Media? n DCP/Analog Bearer Capability: 3.1kHz </pre> </div>

Step	Description
<p>11.</p>	<p>Trunk Group</p> <p>Use the add trunk group command to create a trunk group for the H.323 trunk to the FaxCore 2007 server. For the compliance test at site 1, trunk group 3 was configured using the parameters highlighted below. Default values may be used for all other fields.</p> <p>On Page 1:</p> <ul style="list-style-type: none"> ▪ Set the Group Type field to <i>isdn</i>. ▪ Enter a descriptive name for the Group Name. ▪ Enter an available trunk access code (TAC) that is consistent with the existing dial plan in the TAC field. ▪ Set the Carrier Medium to <i>H.323</i>. ▪ Set the Service Type field to <i>tie</i>. ▪ Set the Member Assignment Method to <i>auto</i>. ▪ Set the Signaling Group to the signaling group shown in the previous step. ▪ In Number of Members field, enter the number of trunks in the trunk group. This determines how many simultaneous calls can be supported by the configuration. ▪ Default values may be used for all other fields. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <pre> add trunk-group 3 Page 1 of 21 TRUNK GROUP Group Number: 3 Group Type: isdn CDR Reports: y Group Name: FaxCore TG COR: 1 TN: 1 TAC: *003 Direction: two-way Outgoing Display? n Carrier Medium: H.323 Dial Access? n Busy Threshold: 255 Night Service: Queue Length: 0 Service Type: tie Auth Code? n Member Assignment Method: auto Signaling Group: 3 Number of Members: 6 </pre> </div>
<p>12.</p>	<p>Trunk Group – continued</p> <p>On Page 2:</p> <p>Set the Codeset to Send Display field to <i>0</i>.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <pre> add trunk-group 3 Page 2 of 21 Group Type: isdn TRUNK PARAMETERS Codeset to Send Display: 0 Codeset to Send National IEs: 6 Charge Advice: none Supplementary Service Protocol: a Digit Handling (in/out): enbloc/enbloc Digital Loss Group: 18 Incoming Calling Number - Delete: Insert: Format: Disconnect Supervision - In? y Out? n Answer Supervision Timeout: 0 </pre> </div>

Step	Description
13.	<p>Trunk Group – continued On Page 3:</p> <ul style="list-style-type: none"> ▪ Set the Send Name field and Send Calling Number field to y. These settings enable the sending of calling party name and number to the far end. ▪ Set the Numbering Format field to public. This field specifies the format of the calling party number sent to the far-end. ▪ Default values may be used for all other fields. <pre style="border: 1px solid black; padding: 5px;"> add trunk-group 3 Page 3 of 21 TRUNK FEATURES ACA Assignment? n Measured: none Internal Alert? n Maintenance Tests? y Data Restriction? n NCA-TSC Trunk Member: Send Name: y Send Calling Number: y Used for DCS? n Send EMU Visitor CPN? n Suppress # Outpulsing? n Format: public UUI IE Treatment: service-provider Replace Restricted Numbers? n Replace Unavailable Numbers? n Send Connected Number: n Hold/Unhold Notifications? n Modify Tandem Calling Number? n Send UUI IE? y Send UCID? n Send Codeset 6/7 LAI IE? y </pre>
14.	<p>Signaling Group – Update Use the change signaling-group command to update the Trunk Group for Channel Selection field with the trunk group created in Steps 11 – 13.</p> <pre style="border: 1px solid black; padding: 5px;"> change signaling-group 3 Page 1 of 5 SIGNALING GROUP Group Number: 3 Group Type: h.323 Remote Office? n Max number of NCA TSC: 0 SBS? n Max number of CA TSC: 0 Trunk Group for NCA TSC: IP Video? n Trunk Group for Channel Selection: 3 TSC Supplementary Service Protocol: a T303 Timer(sec): 10 Near-end Node Name: CLAN2A Far-end Node Name: FaxCore Near-end Listen Port: 1720 Far-end Listen Port: 1720 Far-end Network Region: 2 LRQ Required? n Calls Share IP Signaling Connection? n RRQ Required? n Bypass If IP Threshold Exceeded? n H.235 Annex H Required? n DTMF over IP: out-of-band Direct IP-IP Audio Connections? n Link Loss Delay Timer(sec): 90 IP Audio Hairpinning? n Enable Layer 3 Test? n Interworking Message: PROGRESS H.323 Outgoing Direct Media? n DCP/Analog Bearer Capability: 3.1kHz </pre>

Step	Description
15.	<p>Public Unknown Numbering Public unknown numbering defines the calling party number to be sent to the far-end. Use the change public-unknown-numbering command to create an entry that will be used by the trunk group defined in Step 11. In the example shown below, all calls originating from a 5-digit extension beginning with 2 and routed across any trunk group (Trk Grp column is blank) will be sent as a 5-digit calling number.</p> <pre data-bbox="316 436 1416 653"> change public-unknown-numbering 0 Page 1 of 2 NUMBERING - PUBLIC/UNKNOWN FORMAT Ext Ext Trk CPN Total Len Code Grp(s) Prefix CPN 5 2 5 Total Administered: 1 Maximum Entries: 9999 </pre>
16.	<p>Route Pattern Use the change route-pattern command to create a route pattern that will route calls to the H.323 trunk that connects to the FaxCore 2007 server.</p> <p>The example below shows the route pattern used for the compliance test at site 1. A descriptive name was entered for the Pattern Name field. The Grp No field was set to the trunk group created in Steps 11 – 13. The Facility Restriction Level (FRL) field was set to a level that allows access to this trunk for all users that require it. The value of 0 is the least restrictive level. The default values were used for all other fields.</p> <pre data-bbox="316 1056 1399 1535"> change route-pattern 3 Page 1 of 3 Pattern Number: 3 Pattern Name: FaxCore SCCAN? n Secure SIP? n Grp FRL NPA Pfx Hop Toll No. Inserted DCS/ IXC No No Mrk Lmt List Del Digits Dgts QSIG 1: 3 0 1: n user 2: 2: n user 3: 3: n user 4: 4: n user 5: 5: n user 6: 6: n user BCC VALUE TSC CA-TSC ITC BCIE Service/Feature PARM No. Numbering LAR 0 1 2 M 4 W Request Dgts Format 3: y y y y y n n rest 2: y y y y y n n rest 1: y y y y y n n rest </pre>

Step	Description
17.	<p>Routing Calls to FaxCore 2007</p> <p>Automatic Alternate Routing (AAR) was used to route calls to FaxCore 2007. Use the change aar analysis command to create an entry in the AAR Digit Analysis Table for this purpose. The example below shows entries previously created for site 1 using the display aar analysis 0 command. The 3rd highlighted entry specifies that numbers that begin with 7 and are 5 digits long use route pattern 3. Route pattern 3 routes calls to FaxCore 2007 at Site 1.</p> <pre data-bbox="316 478 1399 730"> display aar analysis 0 Page 1 of 2 AAR DIGIT ANALYSIS TABLE Location: all Percent Full: 1 Dialed Total Route Call Node ANI String Min Max Pattern Type Num Reqd 50 5 5 4 aar n 52 5 5 4 aar n 7 5 5 3 aar n </pre>
18.	<p>Routing Calls From Site 1 to Site 2</p> <p>The AAR Digit Analysis Table in Step 17 also shows that a 5-digit dialed number starting with 50 or 52 will use route pattern 4 by AAR. The previously created route pattern 4 as displayed below specifies that the call from Site 1 to the fax machine at 50003 or the FaxCore 2007 server at 52xxx at Site 2 will be routed to trunk group 4 which is an administered ISDN-PRI trunk. In the same way, this trunk group can be changed to an H.323 trunk for fax calls from Site 1 to Site 2 to go on an H.323 trunk.</p> <pre data-bbox="316 1060 1399 1633"> display route-pattern 4 Page 1 of 3 Pattern Number: 4 Pattern Name: CMnorth RP SCCAN? n Secure SIP? n Grp FRL NPA Pfx Hop Toll No. Inserted DCS/ IXC No Mrk Lmt List Del Digits QSIG Dgts Intw 1: 4 0 2: 3: 4: 5: 6: BCC VALUE TSC CA-TSC ITC BCIE Service/Feature PARM No. Numbering LAR 0 1 2 M 4 W Request Dgts Format Subaddress 1: y y y y y n n rest none 2: y y y y y n n rest none 3: y y y y y n n rest none 4: y y y y y n n rest none 5: y y y y y n n rest none 6: y y y y y n n rest none </pre>

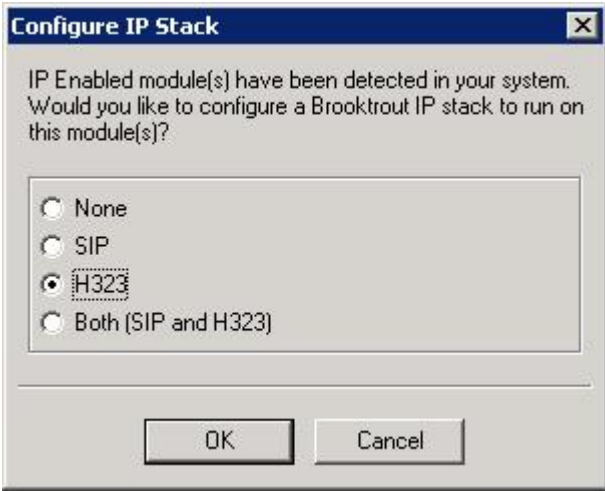

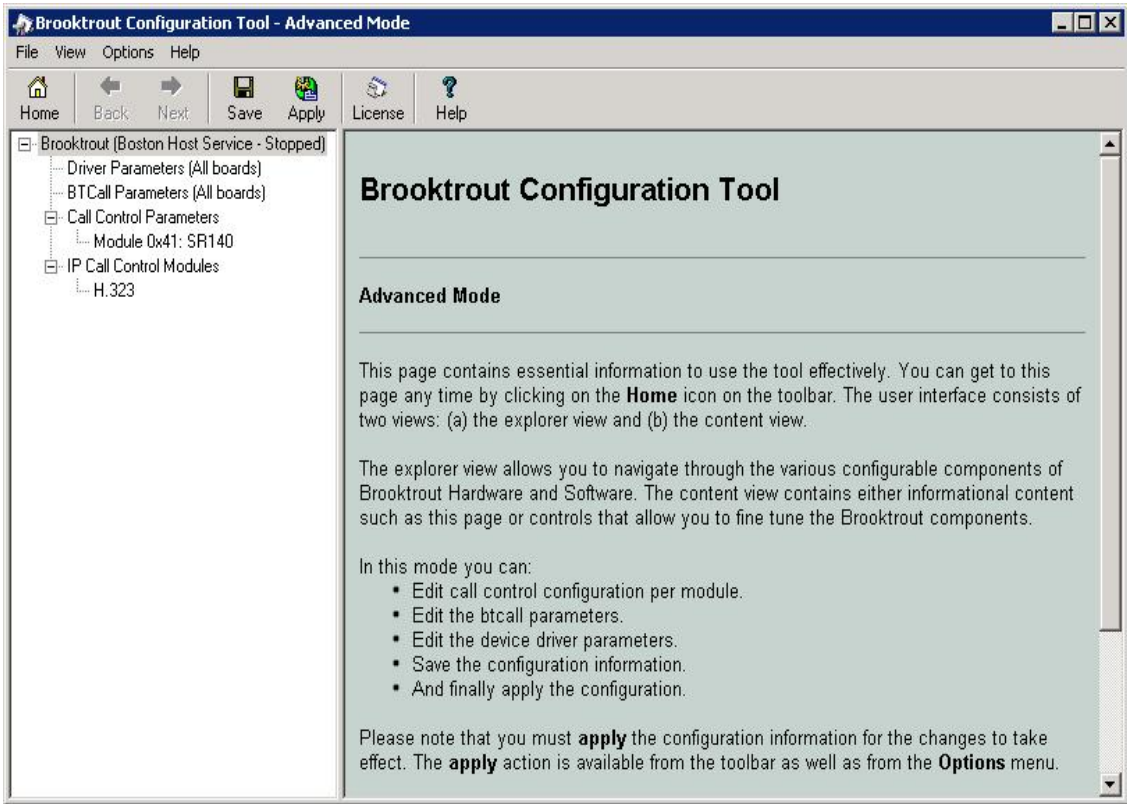

Step	Description
19.	<p>Turn off Media Shuffling on H.323 Trunk between Sites</p> <p>Use the change signaling-group command to turn off media shuffling on the previously administered H.323 trunk between Site 1 and Site 2 (in this compliance test, trunk group 5 was used at Site 1). This configuration is necessary to ensure successful fax operations between the 2 FaxCore 20007 servers across the H.323 trunk.</p> <pre data-bbox="316 401 1401 974"> change signaling-group 5 Page 1 of 5 SIGNALING GROUP Group Number: 5 Group Type: h.323 Remote Office? n Max number of NCA TSC: 0 SBS? n Max number of CA TSC: 0 IP Video? n Trunk Group for NCA TSC: Trunk Group for Channel Selection: 5 TSC Supplementary Service Protocol: a T303 Timer(sec): 10 Near-end Node Name: CLAN1A Far-end Node Name: CMnorth Near-end Listen Port: 1720 Far-end Listen Port: 1720 Far-end Network Region: 3 Calls Share IP Signaling Connection? n LRQ Required? n RRQ Required? n Bypass If IP Threshold Exceeded? n H.235 Annex H Required? n Direct IP-IP Audio Connections? n IP Audio Hairpinning? n Interworking Message: PROGRESS DCP/Analog Bearer Capability: 3.1kHz DTMF over IP: out-of-band Link Loss Delay Timer(sec): 90 Enable Layer 3 Test? n H.323 Outgoing Direct Media? n </pre>

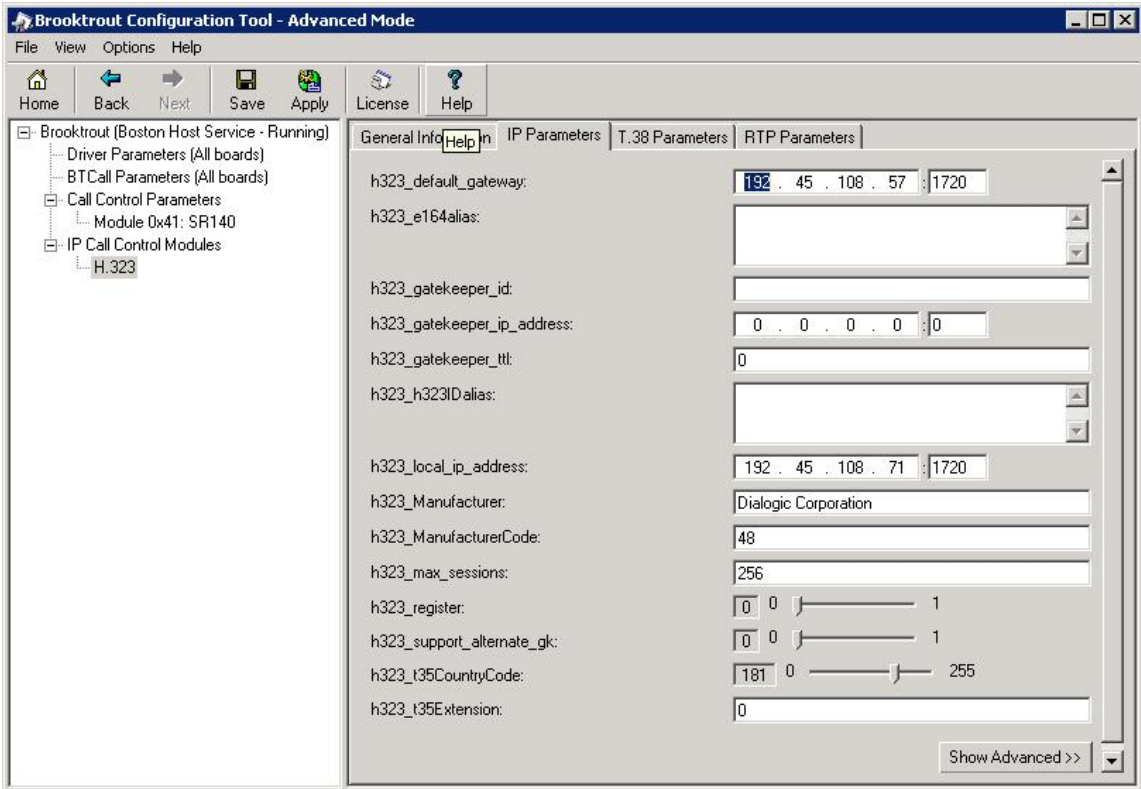

5. Configure FaxCore 2007

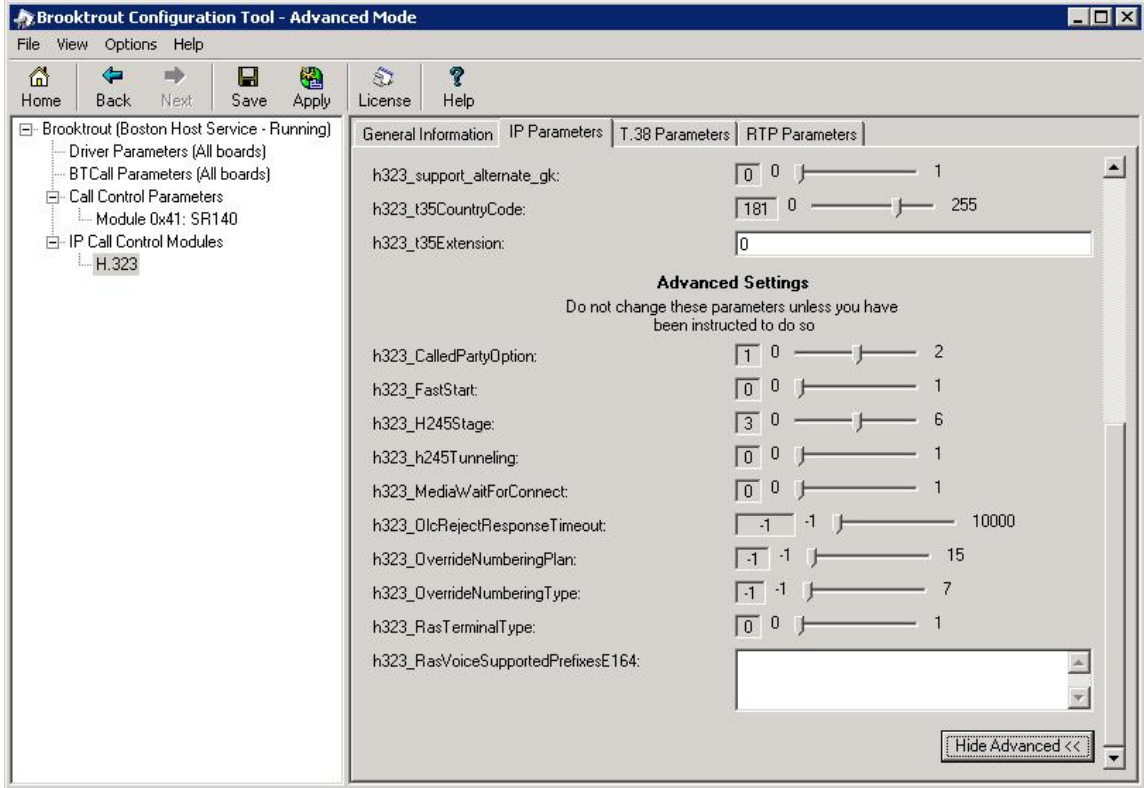

This section describes the configuration of FaxCore 2007. It assumes that the application and all required software components, including the Brooktrout SR140 fax software, have been installed and properly licensed. For instructions on sending and receiving faxes, consult the FaxCore 2007 Administrator Manual [3] and the FaxCore 2007 Getting Started Guide [4].

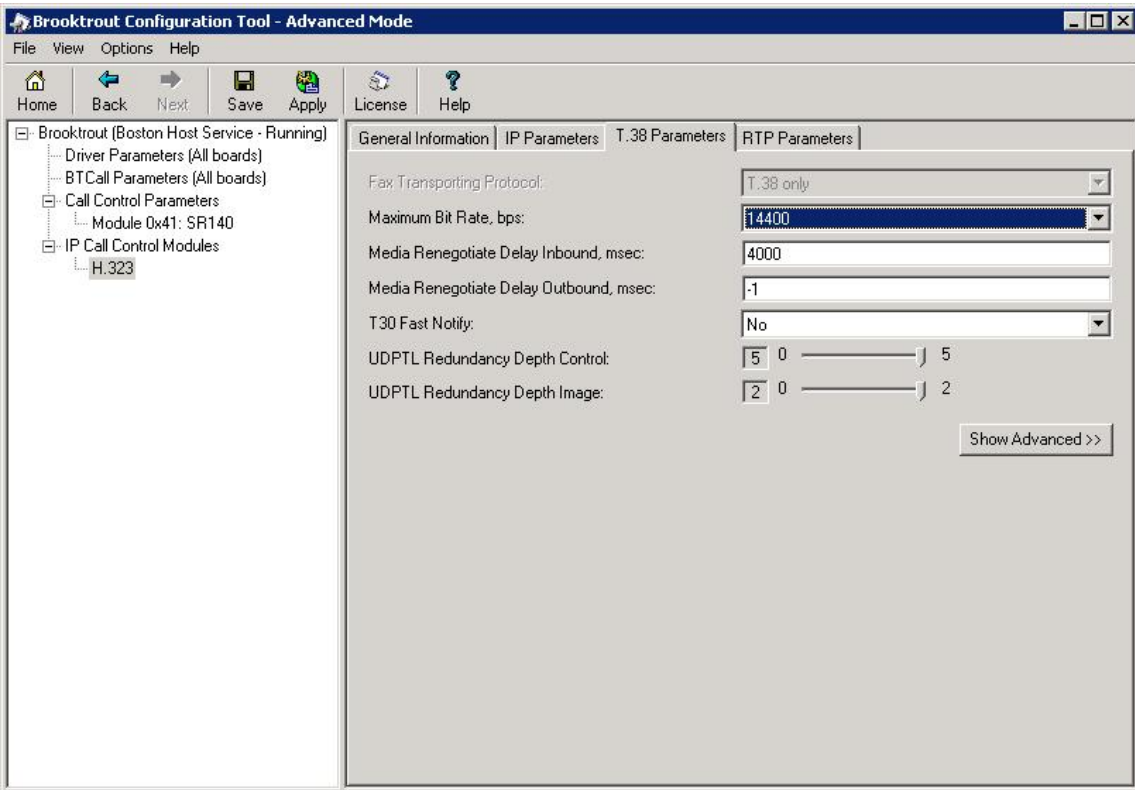

The examples shown in this section refer to site 1. Unless specified otherwise, these same steps also apply to site 2 using values appropriate for site 2 from **Figure 1**.

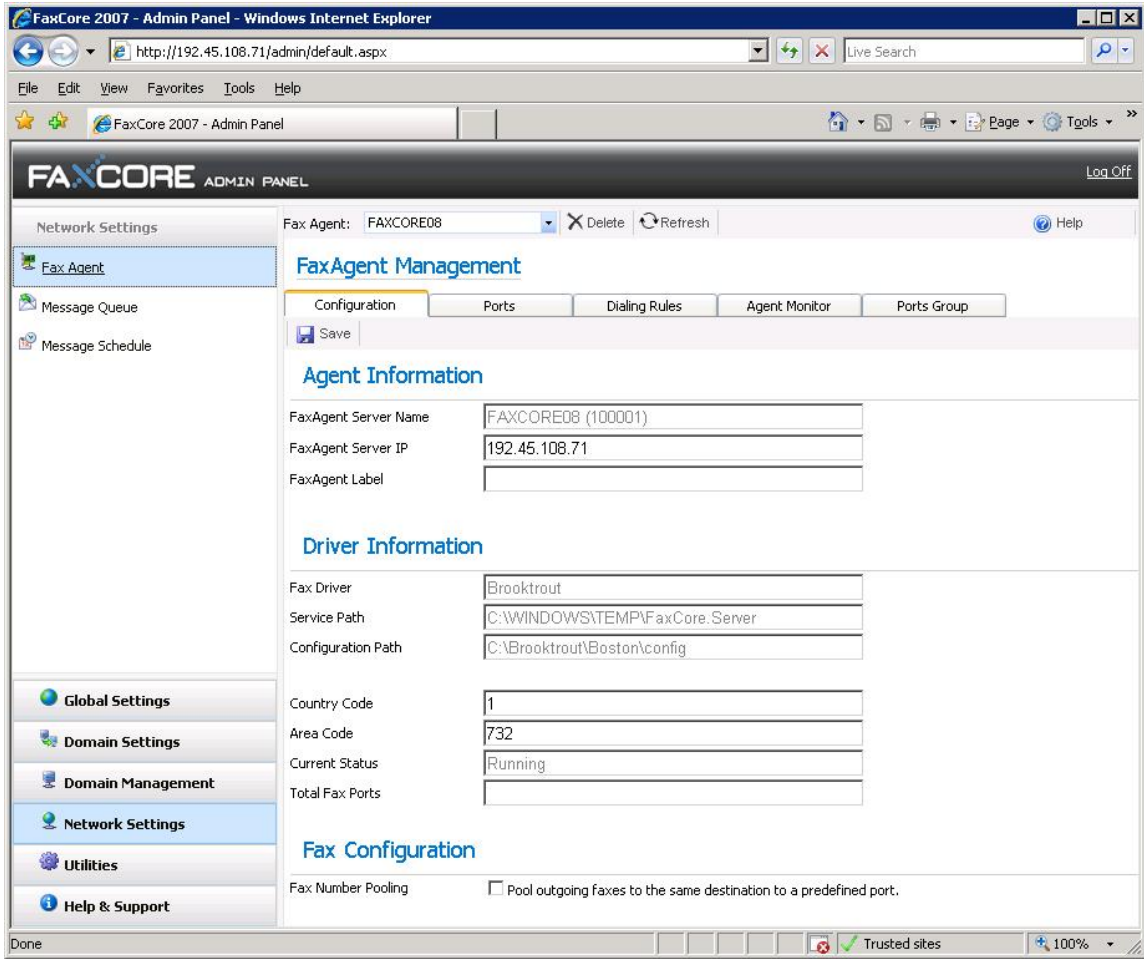

Step	Description
1.	<p>Launch Brooktrout Configuration Tool</p> <p>On the FaxCore 2007 server, verify from the Windows Services applet that the following 2 services are not running; stop them if necessary:</p> <ul style="list-style-type: none">• Dialogic Corporation Boston Host Service• FXC2.FaxAgent <p>Launch the Brooktrout Configuration Tool from Windows Start Menu. Navigate to Start → All Programs → Brooktrout Configuration Tool.</p>

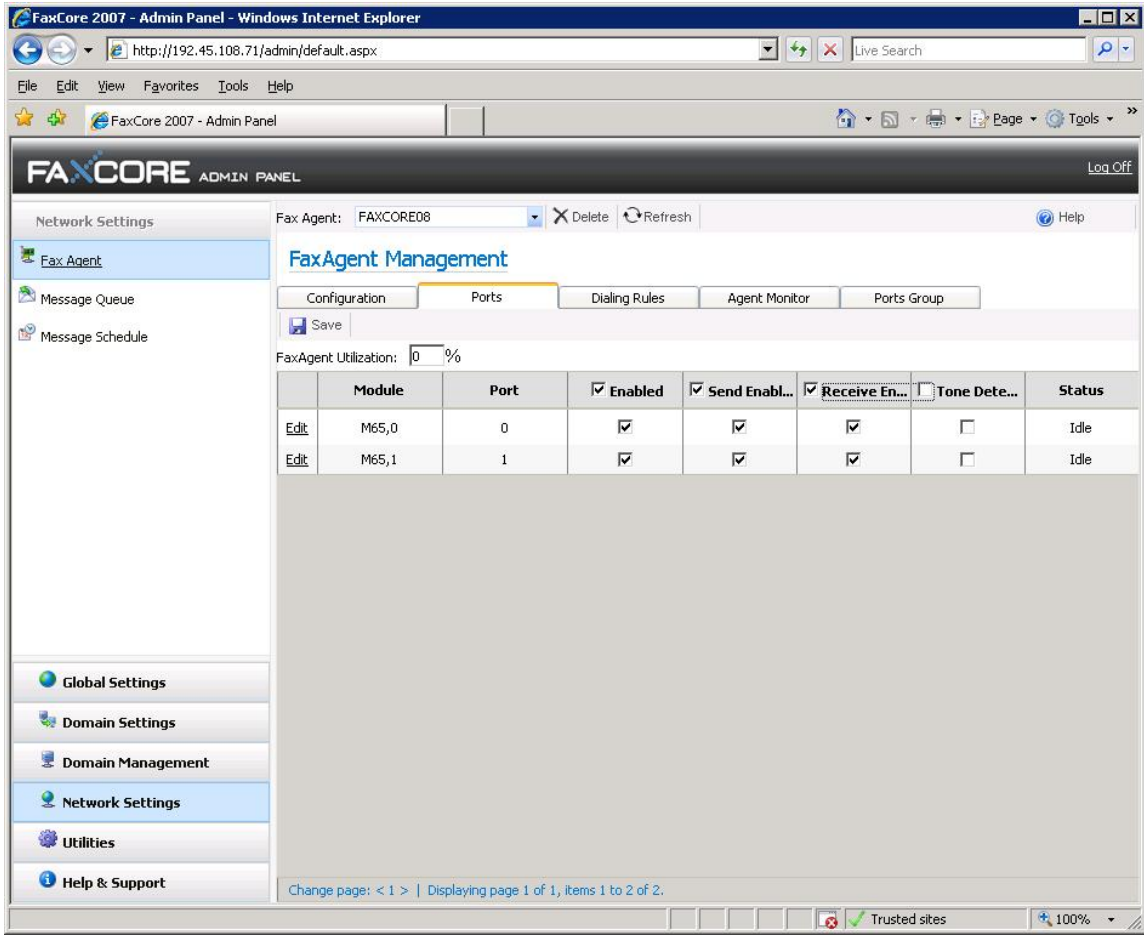

Step	Description
2.	<p data-bbox="293 184 558 216">Configure IP Stack</p> <p data-bbox="293 222 1406 289">A Configure IP Stack window is displayed on first invocation of the Brooktrout SR140 configuration tool (assuming the Brooktrout SR-140 licenses were installed):</p> <div data-bbox="561 327 1162 814" style="border: 1px solid gray; padding: 10px; margin: 10px auto; width: fit-content;">  </div> <p data-bbox="293 852 1330 919">Choose H323 and click OK. The following SR140 configuration tool window is displayed.</p> <div data-bbox="302 957 1422 1755" style="border: 1px solid gray; padding: 10px; margin: 10px auto; width: 90%;">  </div>

Step	Description
3.	<p>Configure Driver IP Parameters</p> <p>On the main screen, navigate to Brooktrout → IP Call Control Modules → H.323 in the left hand tree menu. Select the IP Parameters tab. Configure the fields as follows:</p> <ul style="list-style-type: none"> • h323_default_gateway – for Site 1, set to the IP address of the CLAN circuit pack used to connect to the FaxCore 2007 server; for Site 2, set to the IP address of the Avaya S8300 Server. The associated port should be set to 1720 as in Step 10 of Avaya Communication Manager configuration • h323_local_ip_address – set to the IP address of the FaxCore 2007 server; port should be set to 1720 <p>Use default values for all other fields.</p> 

Step	Description
4.	<p>Configure Advanced Driver IP Parameters</p> <p>On the IP Parameters screen, click the Show Advanced button. Configure the fields as follows:</p> <ul style="list-style-type: none"> • h323_FastStart – set to 0 • h323_H245Stage – set to 3 • h323_h245Tunneling – set to 0 <p>Use default values for all other fields.</p> 

Step	Description
5.	<p>Configure T.38 Parameters Select the T.38 Parameters tab. Configure the fields as shown below in the screenshot.</p> 
6.	<p>After verifying all the above parameters are properly set, click Save, then Apply in the button menu. This will start the Dialogic Corporation Boston Host Service. Verify from the Windows Services that the service was started (not shown).</p> <p>Then start the FXC2.FaxAgent service from the Windows Services (not shown).</p>

Step	Description
7.	<p>Verify FaxAgent Server IP</p> <p>On the FaxCore 2007 server, access http://localhost/admin in the web browser. Log in with appropriate login credentials. Click on Network Settings in the lower left navigation tree, and then click Fax Agent in the upper left navigation tree. Select the Configuration tab in the display area. Verify that the FaxAgent Server IP is correctly set to the IP address of the FaxCore 2007 server.</p>  <p>The screenshot shows the FaxCore 2007 Admin Panel in Internet Explorer. The browser address bar shows http://192.45.108.71/admin/default.aspx. The page title is 'FAXCORE ADMIN PANEL'. The left navigation pane shows 'Network Settings' selected, with 'Fax Agent' highlighted. The main content area is titled 'FaxAgent Management' and has the 'Configuration' tab selected. Under 'Agent Information', the 'FaxAgent Server IP' field contains the value '192.45.108.71'. Other fields include 'FaxAgent Server Name' (FAXCORE08 (100001)), 'FaxAgent Label', 'Fax Driver' (Brooktrout), 'Service Path' (C:\WINDOWS\TEMP\FaxCore.Server), 'Configuration Path' (C:\Brooktrout\Boston\config), 'Country Code' (1), 'Area Code' (732), 'Current Status' (Running), and 'Total Fax Ports'. Under 'Fax Configuration', there is a checkbox for 'Pool outgoing faxes to the same destination to a predefined port.' which is currently unchecked. The status bar at the bottom shows 'Done' and 'Trusted sites'.</p>

Step	Description																								
8.	<p>Configure Ports</p> <p>Select the Ports tab in the browser display area. Enable all available ports (fax channels) for both Send and Receive as shown below:</p>  <p>The screenshot shows the FaxCore 2007 Admin Panel in Internet Explorer. The 'FaxAgent Management' page is open, with the 'Ports' tab selected. The 'Fax Agent' is set to 'FAXCORE08'. The 'FaxAgent Utilization' is 0%. A table displays the configuration for two ports:</p> <table border="1" data-bbox="565 695 1422 800"> <thead> <tr> <th></th> <th>Module</th> <th>Port</th> <th>Enabled</th> <th>Send Enabl...</th> <th>Receive En...</th> <th>Tone Dete...</th> <th>Status</th> </tr> </thead> <tbody> <tr> <td>Edit</td> <td>M65,0</td> <td>0</td> <td><input checked="" type="checkbox"/></td> <td><input checked="" type="checkbox"/></td> <td><input checked="" type="checkbox"/></td> <td><input type="checkbox"/></td> <td>Idle</td> </tr> <tr> <td>Edit</td> <td>M65,1</td> <td>1</td> <td><input checked="" type="checkbox"/></td> <td><input checked="" type="checkbox"/></td> <td><input checked="" type="checkbox"/></td> <td><input type="checkbox"/></td> <td>Idle</td> </tr> </tbody> </table>		Module	Port	Enabled	Send Enabl...	Receive En...	Tone Dete...	Status	Edit	M65,0	0	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Idle	Edit	M65,1	1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Idle
	Module	Port	Enabled	Send Enabl...	Receive En...	Tone Dete...	Status																		
Edit	M65,0	0	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Idle																		
Edit	M65,1	1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Idle																		

6. General Test Approach and Test Results

This section describes the compliance testing used to verify the interoperability of FaxCore 2007 with Avaya Communication Manager. This section covers the general test approach and the test results.

6.1. General Test Approach

The general test approach was to make intra-site and inter-site fax calls to and from FaxCore 2007. The inter-site calls were made using both an H.323 trunk and an ISDN-PRI trunk between the sites. Faxes were sent with various page lengths, and resolutions. For performance testing, a large number of 2-page faxes were continuously sent between the two FaxCore 2007 servers. Serviceability testing included verifying proper operation/recovery from failed cables, unavailable resources, Avaya Communication Manager restarts and FaxCore 2007 server restarts. Fax calls were also tested with different Avaya Media Gateway media resources to process the fax data. This included the TN2302 MedPro circuit pack, the TN2602 MedPro circuit pack and the integrated VoIP engine of the Avaya G700 Media Gateway.

6.2. Test Results

FaxCore 2007 successfully passed compliance testing. The following observation was made during the compliance test:

- With media shuffling enabled on all the H.323 trunks (the H.323 trunks between FaxCore 2007 server and Avaya Communication Managers as well as the H.323 trunk between sites), fax failures were observed when sending faxes between the fax servers at each site. In the case of the compliance test, the working configuration for this scenario was to turn off media shuffling on the H.323 trunk between the 2 sites.

7. Verification Steps

The following steps may be used to verify the configuration:

- From the Avaya Communication Manager SAT, use the **status signaling-group** command to verify that the H.323 signaling groups configured in **Section 4, Step 10** and **Step 19** are in-service.
- From the Avaya Communication Manager SAT, use the **status trunk-group** command to verify that the H.323 trunk group configured in **Section 4, Steps 11 - 13** is in-service.
- Verify that fax calls can be placed to/from FaxCore 2007 server.
- From the Avaya Communication Manager SAT, use the **list trace tac** command to verify that fax calls are routed to the expected trunks.

8. Conclusion

These Application Notes describe the procedures required to configure FaxCore 2007 to interoperate with Avaya Communication Manager. FaxCore 2007 successfully passed compliance testing with the observations documented in **Section 6.2**.
