

Avaya Solution & Interoperability Test Lab

Application Notes for configuring Enghouse Presence OpenGate R11.1 to interoperate with Avaya Aura® Communication Manager R8.0.1 and Avaya Aura® Session Manager R8.0.1 – Issue 1.0

Abstract

These Application Notes describe the configuration steps for provisioning Enghouse Presence OpenGate to successfully interoperate with Avaya Aura® Communication Manager and Avaya Aura® Session Manager. Enghouse Presence OpenGate provides ACD and CTI capabilities to companies that do not have any existing CTI or ACD capabilities on their PBX. Enghouse Presence OpenGate integrates with the Avaya solution using SIP trunks and digit manipulation.

Readers should pay attention to **Section 2**, in particular the scope of testing as outlined in Section 2.1 as well as any observations noted in **Section 2.2**, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect Compliance Testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration used to verify Enghouse Presence OpenGate R11.1 can successfully interoperate with Avaya Aura® Communication Manager R8.0.1 and Avaya Aura® Session Manager R8.0.1. Presence OpenGate can be used as an external Automatic Call Distribution (ACD) routing engine and IVR as well as a trunk gateway between the PSTN and an existing PBX, such as Avaya Aura® Communication Manager.

Presence OpenGate replaces the Avaya Aura® Application Enablement Services requirement for a CTI connection to Avaya Aura® Communication Manager by utilizing a SIP connection to Avaya Aura® Session Manager for routing calls to the Avaya Aura® Communication Manager handsets. Presence Suite is required to test the connection of Presence OpenGate to Avaya Aura® Session Manager. The Presence Suite includes the Presence Server, Presence Mail Interactions Server, Presence Web Interactions Server, Presence Administrator, Presence Supervisor, and Presence Agent. Please note that these Application Notes only describe the setup required to add Enghouse Presence OpenGate. The setup of Enghouse Presence Suite is outside the scope of these Application Notes but can be found in the Application Notes titled *Application Notes for Configuring Enghouse Presence Suite R11.1 with Avaya Aura® Communication Manager R8.0.1 and Avaya Aura® Application Enablement Services R8.0*.

2. General Test Approach and Test Results

Testing was performed manually by dialing numbers that were configured to route to Presence OpenGate and receive ACD treatment. Testing included validation of correct operation of typical contact center functions including, inbound voice calls being delivered on an agent skill level basis and call queuing. Functionality testing included basic telephony operations such as answer, hold/retrieve, transfer, and conference. The serviceability test cases were performed manually by busying out and releasing the SIP trunk and by disconnecting and reconnecting the LAN cables. Link Failure\Recovery was tested to ensure successful reconnection on link failure.

For the sample configuration discussed in this document, all calls received from the PSTN by Communication Manager were routed via a SIP Trunk to Session Manager. Session Manager is then responsible for routing the call to Presence OpenGate to receive ACD treatment. Presence OpenGate can route calls to Presence agents served by Avaya endpoints.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in this DevConnect Application Note included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with these Application Notes, the interface between Avaya systems and Presence OpenGate did not include use of any specific encryption features as requested by Enghouse.

2.1 Interoperability Compliance Testing

In the sample configuration described by these Application Notes, calls will be accepted from the PSTN and routed to Presence OpenGate. Presence OpenGate will then map these digits to an internal number which represents the ACD service queue within Presence OpenGate. Presence OpenGate then routes the call to an available Avaya extension by dialing that extension number.

The interoperability compliance test included both feature functionality and serviceability testing. The feature functionality testing focused on verifying Presence OpenGate was capable of receiving calls from Communication Manager and providing ACD treatment to route those calls to available extensions. The serviceability testing focused on verifying the ability of Presence OpenGate to recover from adverse conditions, such as disconnecting the Ethernet cable from the server.

2.2 Test Results

All test cases passed successfully.

2.3 Support

Technical support can be obtained for Enghouse Presence OpenGate as follows:

- Email: *Presence.Support@enghouse.com*
- Website: *<https://www.enghouseinteractive.es/en>*
- Phone: +34 93 10 10 300

3. Reference Configuration

Figure 1 shows the network topology in place during compliance testing. Communication Manager and an Avaya G450 Media Gateway were used as the hosting PBX. SIP trunks are configured between Communication Manager, Session Manager and Presence OpenGate to transport calls between them. Presence Suite, including Presence Agent PC's, were connected to the LAN to provide Agent desktop application connectivity.

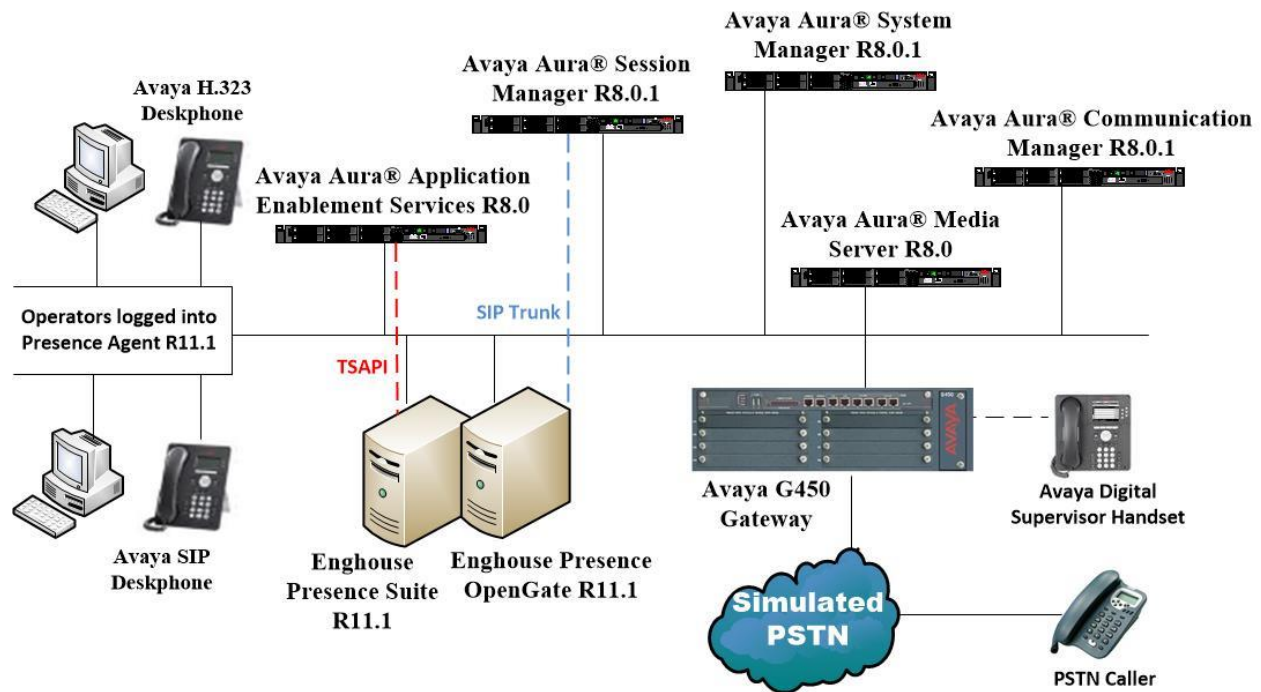

Figure 1: Network Topology used to test Enhouse Presence OpenGate R11.1 with Avaya Aura® Session Manager R8.0.1 and Avaya Aura® Communication Manager R8.0.1

4. Equipment and Software Validated

All the hardware and associated software used in the compliance testing is listed below.

Avaya Equipment	Software / Firmware Version
Avaya Aura® System Manager running on a virtual server	System Manager 8.0.1.1 Build No. – 8.0.0.0.931077 Software Update Revision No: 8.0.11.039340 Service Pack 1
Avaya Aura® Session Manager running on a virtual server	Session Manager R8.0.1 Build No. – 8.0.1.1.801103
Avaya Aura® Communication Manager running on a virtual server	R8.0.1.1.0 – FP1SP1 R018x.00.0.822.0 Update ID 00.0.822.0-25183
Avaya Aura® Application Enablement Services running on Virtual Server	R8.0 Build No – 8.0.0.0.0.6-0
Avaya Media Gateway G450	41.10.1 /1
Avaya Aura® Media Server	Appliance Version R8.0.0.6 Media Server 8.0.0.150 Element Manager 8.0.0.150
Avaya 96x1 SIP Deskphone	7.1.2.0.14
Avaya J179 H323 Deskphone	6.7.002U
Avaya 9408 Digital Deskphone	V2.0
Enghouse Equipment	Software / Firmware Version
Enghouse Presence Suite running on Windows Server 2016 Server	R11.1
Enghouse Presence OpenGate running on Windows Server 2016 Server	R11.1
Enghouse Presence Client running on Windows 10	R11.1

Table 1: Hardware and Software Version Numbers

5. Configure Avaya Aura® Communication Manager

The configuration and verification operations illustrated in this section were all performed using Communication Manager System Administration Terminal (SAT). The information provided in this section describes the configuration of Communication Manager for this solution. For all other provisioning information such as initial installation and configuration, please refer to the product documentation in **Section 10**. Please note that this is the setup required to add Presence OpenGate only the setup of the other possible Presence Suite is outside the scope of these Application Notes but can be found in the Application Notes titled *Application Notes for Configuring Enghouse Presence Suite R11.1 with Avaya Aura® Communication Manager R8.0.1 and Avaya Aura® Application Enablement Services R8.0*.

The configuration operations described in this section can be summarized as follows:

- Verify System Parameters Customer Options
- System Features and Access Codes
- Administer Dial Plan
- Administer Route Selection for Presence OpenGate calls
- Configure SIP Trunk

Note: The configuration of the PRI interface to the PSTN is outside the scope of these Application Notes.

5.1 Verify System Parameters Customer Options

The license file installed on the system controls these attributes. If a required feature is not enabled or there is insufficient capacity, contact an authorized Avaya sales representative. Use the **display system-parameters customer-options** command to determine these values. On **Page 2**, verify that the **Maximum Administered SIP Trunks** have sufficient capacity. Each call that receives ACD treatment from Presence OpenGate uses a minimum of one SIP trunk. Calls that are routed back to stations commissioned on Communication Manager or calls that are routed back to Communication Manager to access the PSTN, use 2 SIP trunks.

display system-parameters customer-options		Page	2 of 11
OPTIONAL FEATURES			
IP PORT CAPACITIES	USED		
Maximum Administered H.323 Trunks:	12000	250	
Maximum Concurrently Registered IP Stations:	18000	2	
Maximum Administered Remote Office Trunks:	12000	0	
Maximum Concurrently Registered Remote Office Stations:	18000	0	
Maximum Concurrently Registered IP eCons:	414	0

5.2 System Features and Access Codes

For the testing, **Trunk-to Trunk Transfer** was set to **all** on **page 1** of the **system-parameters features** page. This is a system wide setting that allows calls to be routed from one trunk to another and is usually turned off to help prevent toll fraud. An alternative to enabling this feature on a system wide basis is to control it using COR (Class of Restriction). See **Section 10** for supporting documentation.

display system-parameters features	Page 1 of 19
FEATURE-RELATED SYSTEM PARAMETERS	
Self Station Display Enabled? n

Auto Alternate Routing (AAR) Access Code: 8	
Auto Route Selection (ARS) - Access Code 1: 9	Access Code 2:
Automatic Callback Activation: *25	Deactivation: #25

5.3 Administer Dial Plan

It was decided for compliance testing that all calls to 6300 were to be sent across the SIP trunk to Session Manager and therefore to Presence OpenGate. To achieve this routing, automatic alternate routing (aar) will be used to route the calls. The dial plan and aar routing analysis need to be changed to allow this routing.

Type **change dialplan analysis** to make changes to the dial plan. Note that **6** is of call type **udp** which means any numbers beginning with 6 are a part of the uniform dial plan.

change dialplan analysis

Page 1 of 12

DIAL PLAN ANALYSIS TABLE

Location: all

Percent Full: 3

Dialed String	Total Length	Call Type	Dialed String	Total Length	Call Type	Dialed String	Total Length	Call Type
1	4	udp	#	3	fac			
2	4	udp						
3	4	udp						
4	4	ext						
5	4	udp						
58	5	ext						
5999	4	ext						
6	4	udp

7	4	udp						
781	5	ext						
8	1	fac						
9	1	fac						
*	3	fac						
*8	4	dac						

5.4 Administer Route Selection for Presence OpenGate Calls

Use the **change uniform-dialplan** command to configure the routing of the dialed digits. In the example below calls to **6300** will use Automatic Alternate Routing (aar). No further digits are deleted or inserted. Calls are sent to **aar** for further processing.

change uniform-dialplan 6						Page	1 of	2
UNIFORM DIAL PLAN TABLE						Percent Full: 0		
Matching			Insert			Node		
Pattern	Len	Del	Digits	Net	Conv	Num		
6300	4	0		aar	n			
65	4	0		aar	n			
					n			
					n			
					n			
					n			
					n			

Use the **change aar analysis** command to further configure the routing of the dialed digits. Calls to Presence OpenGate are achieved by dialing **6300** and are matched with the AAR entry shown below. Calls are sent to **Route Pattern 1**, which contains the outbound SIP Trunk Group.

change aar analysis 6						Page	1 of	2
AAR DIGIT ANALYSIS TABLE						Percent Full: 3		
Location: all								
Dialed	Total		Route	Call	Node	ANI		
String	Min	Max	Pattern	Type	Num	Reqd		
6	7	7	254	aar		n		
6300	4	4	1	lev0		n		
65	4	4	1	aar		n		
7	7	7	254	aar		n		
8	7	7	254	aar		n		
9	7	7	254	aar		n		
						n		
						n		
						n		
						n		

Use the **change route-pattern *n*** command to add the SIP trunk group to the route pattern that AAR selects. In this configuration, Route Pattern Number **1** is used to route calls to trunk group (**Grp No**) **1**, this is the SIP Trunk configured in **Section 5.5**. The **Numbering Format** was set to **lev0-pvt**.

change route-pattern 1										Page	1 of	3
Pattern Number: 1										Pattern Name: SIP TRUNK

5:	y	y	y	y	y	n	n			none		
6:	y	y	y	y	y	n	n			none		

5.5 Configure SIP Trunk

In the **Node Names IP** form, note the IP Address of the **procr** and Session Manager (**SM80vmpg**). The host names will be used throughout the other configuration screens of Communication Manager and Session Manager. Type **display node-names ip** to show all the necessary node names.

display node-names ip		IP NODE NAMES
Name	IP Address	
AMS80vmpg	10.10.40.61	
G450	10.10.40.14	
IPOffice	10.10.40.25	
NRS	10.10.40.101	
PGDECT	10.10.40.50	
SM80vmpg	10.10.40.58	
SM_Oceana	10.10.41.26	
aes80vmpg	10.10.40.56	
default	0.0.0.0	
procr	10.10.40.59	

(16 of 18 administered node-names were displayed)

Use 'list node-names' command to see all the administered node-names

Use 'change node-names ip xxx' to change a node-name 'xxx' or add a node-name

In the **IP Network Region** form, the **Authoritative Domain** field is configured to match the domain name configured on Session Manager in **Section 6.1**. In this configuration, the domain name is **devconnect.local**. The **IP Network Region** form also specifies the **IP Codec Set** to be used. This codec set will be used for calls routed over the SIP trunk to Session manager as **ip-network region 1** is specified in the SIP signaling group.

```

display ip-network-region 1                                     Page 1 of 20
IP NETWORK REGION

  H.323 Link Bounce Recovery? y
  Idle Traffic Interval (sec): 20
  Keep-Alive Interval (sec): 5
  Keep-Alive Count: 5

```

In the **IP Codec Set** form, select the audio codecs supported for calls routed over the SIP trunk to Presence OpenGate. The form is accessed via the **display ip-codec-set n** command. Note that IP codec set 1 was specified in IP Network Region 1 shown above. Multiple codecs may be specified in the **IP Codec Set** form in order of preference; the example below includes **G.711A** (a-law), **G.711MU** (mu-law) and **G729A** which are supported by Presence OpenGate.

Media Encryption is used on the Avaya sets where possible these use **srtp-aescm128-hmac80** media encryption. **None** is also present to facilitate any extension not capable of handling encryption.

```

display ip-codec-set 1                                         Page 1 of 2

Prior to configuring a SIP trunk group for communication with Session Manager, a SIP signaling group must be configured. Configure the Signaling Group form shown below as follows:

- Set the **Group Type** field to **sip**.
- Set the **Transport Method** to the desired transport method, **tls** (Transport Layer Security) should be used for DevConnect testing.
- The **Peer Detection Enabled** field should be set to **y** allowing Communication Manager to automatically detect if the peer server is a Session Manager.
- Set the **Near-end Node Name** to **procr**. This value is taken from the **IP Node Names** form shown above.
- Set the **Far-end Node Name** to the node name defined for the Session Manager (node name **SM80vmpg**), also shown above.
- Ensure that the recommended TLS port value of **5061** is configured in the **Near-end Listen Port** and the **Far-end Listen Port** fields.
- In the **Far-end Network Region** field, enter the IP Network Region configured above. This field logically establishes the **far-end** for calls using this signaling group as network region **1**.
- The **Far-end Domain** field can be set to the domain name specified in the IP Network Region.
- The **DTMF over IP** field should remain set to the default value of **rtp-payload**. This value enables Communication Manager to send DTMF transmissions using RFC 2833.
- The **Direct IP-IP Audio Connections** field is set to **y**.
- The default values for the other fields may be used.

Note: These were the settings for compliance testing, however, this trunk may be setup differently on each customer site depending on the customer's requirements for SIP routing.

6. Configuring Avaya Aura® Session Manager

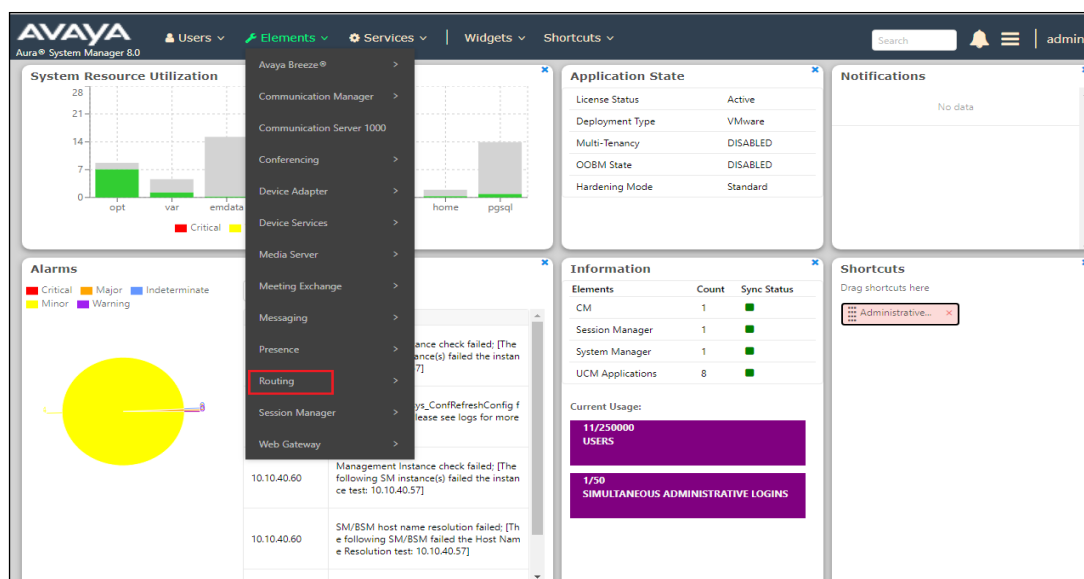

This section provides the procedures for configuring Session Manager. Session Manager is configured via System Manager. The procedures include the following areas:

- Domains and Locations
- Configure SIP Entity
- Configure Entity Link
- Configure Routing Policy
- Configure Dial Pattern

To make changes on Session Manager a web session is established to System Manager. Log into System Manager by opening a web browser and navigating to <https://<System Manager FQDN>/SMGR>. Enter the appropriate credentials for the **User ID** and **Password** and click on **Log On**.

Once logged in navigate to **Elements** and click on **Routing** highlighted below.

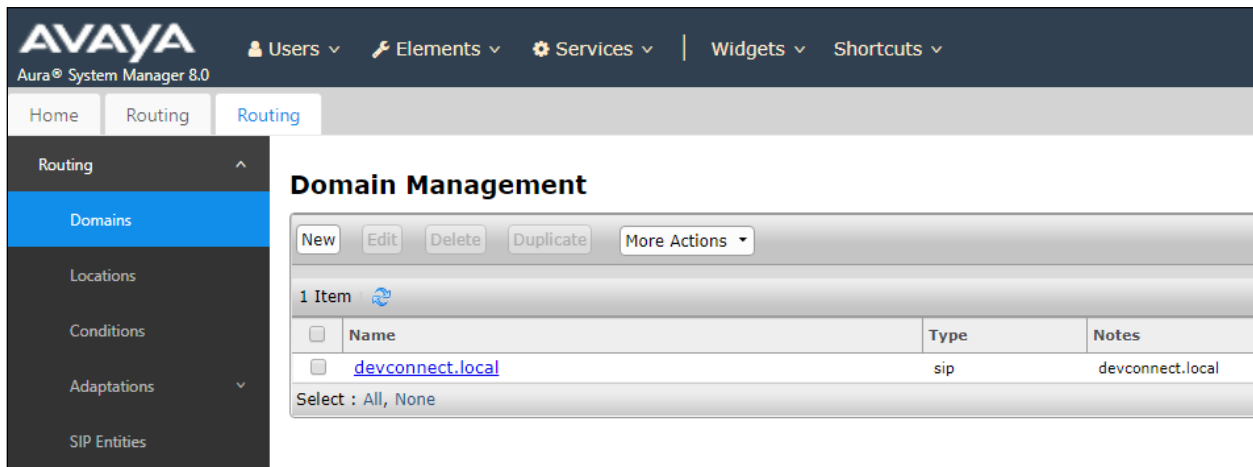

6.1 Domains and Locations

Note: It is assumed that a domain and a location have already been configured, therefore a quick overview of the domain and location that was used in compliance testing is provided here.

6.1.1 Display the Domain

Select **Domains** from the left window. This will display the domain configured on Session Manager. For compliance testing this domain was **devconnect.local** as shown below. If a domain is not already in place, click on **New**. This will open a new window (not shown) where the domain can be added.

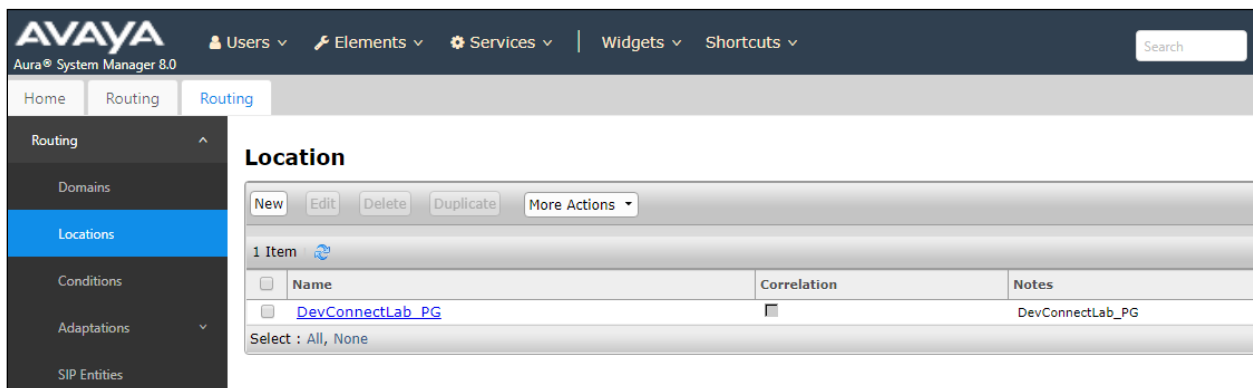

The screenshot shows the Avaya Aura System Manager 8.0 interface. The top navigation bar includes 'Users', 'Elements', 'Services', 'Widgets', and 'Shortcuts'. The left sidebar has 'Routing' expanded, with 'Domains' selected. The main content area is titled 'Domain Management' and features a table with one item: 'devconnect.local' of type 'sip'.

Name	Type	Notes
devconnect.local	sip	devconnect.local

6.1.2 Display the Location

Select **Locations** from the left window and this will display the location setup. The example below shows the location **DevConnectLab_PG** which was used for compliance testing. If a location is not already in place, then one must be added to include the IP address range of the Avaya solution. Click on **New** to add a new location.

The screenshot shows the Avaya Aura System Manager 8.0 interface. The top navigation bar includes 'Users', 'Elements', 'Services', 'Widgets', and 'Shortcuts'. The left sidebar has 'Routing' expanded, with 'Locations' selected. The main content area is titled 'Location' and features a table with one item: 'DevConnectLab_PG' with correlation 'PG'.

Name	Correlation	Notes
DevConnectLab_PG	PG	DevConnectLab_PG

6.2 Configure Presence OpenGate SIP Entity

Each SIP device (other than Avaya SIP phones) that communicates with Session Manager requires a SIP Entity and Entity Link configuration.

Click on **SIP Entities** in the left column and select **New** in the right window.

The screenshot shows the 'SIP Entities' page in the Avaya Aura System Manager. The left sidebar has 'SIP Entities' selected. The main area displays a table with 11 items. The table has columns for Name, FQDN or IP Address, Type, and Notes. The items listed are:

Name	FQDN or IP Address	Type	Notes
AA Messaging V7	10.10.40.23	SIP Trunk	AA Messaging V7
CM71vmppg	10.10.40.47	CM	CM71vmppg
CM80vmppg	10.10.40.59	CM	CM80vmppg
CS1KPG1	10.10.40.111	SIP Trunk	CS1000 (CS1KPG1)
EP72vmppg	10.10.40.63	Voice Portal	EP72vmppg
EP_Oceana	10.10.41.16	Voice Portal	EP_Oceana
SM80vmppg	10.10.40.58	Session Manager	SM80vmppg
StephensCM	10.10.16.23	CM	StephensCM
StevesEP	10.10.16.20	Voice Portal	StevesEP

Enter a suitable **Name** for the new SIP Entity and the **IP Address** of the Presence OpenGate server. Enter the correct **Time Zone** and **Location** and scroll down to SIP Entity Links.

The screenshot shows the 'SIP Entity Details' form in the Avaya Aura System Manager. The left sidebar has 'SIP Entities' selected. The main area displays the 'General' tab of the 'SIP Entity Details' form. The form has fields for Name, FQDN or IP Address, Type, Notes, Adaptation, Location, Time Zone, SIP Timer B/F (in seconds), Minimum TLS Version, Credential name, Securable, Call Detail Recording, Loop Detection Mode, Loop Count Threshold, and Loop Detection Interval (in msec). The values entered are:

- Name: PresenceOG
- FQDN or IP Address: 10.10.40.126
- Type: SIP Trunk
- Notes: Presence OpenGate
- Adaptation: (empty)
- Location: DevConnectLab_PG
- Time Zone: Europe/Dublin
- SIP Timer B/F (in seconds): 4
- Minimum TLS Version: Use Global Setting
- Credential name: (empty)
- Securable: (unchecked)
- Call Detail Recording: egress
- Loop Detection Mode: On
- Loop Count Threshold: 5
- Loop Detection Interval (in msec): 200

6.3 Configure Presence OpenGate SIP Entity Link

An Entity link can be added from the SIP Entities page. Using the page from the previous page scroll down to Entity Links.

Upon scrolling down to **Entity Links** click on **Add**.

The screenshot shows the 'Monitoring' and 'Entity Links' sections of a configuration page. In the 'Monitoring' section, 'SIP Link Monitoring' and 'CRLF Keep Alive Monitoring' are both set to 'Use Session Manager Configuration'. 'Supports Call Admission Control' and 'Shared Bandwidth Manager' are unchecked. 'Primary Session Manager Bandwidth Association' and 'Backup Session Manager Bandwidth Association' are set to empty dropdowns. The 'Entity Links' section has 'Override Port & Transport with DNS SRV' unchecked. Below this is a table with 0 items. The table has columns: Name, SIP Entity 1, Protocol, Port, SIP Entity 2, Port, Connection Policy, and Deny New Service. Below the table is the 'SIP Responses to an OPTIONS Request' section, which also has 0 items. At the bottom are 'Commit' and 'Cancel' buttons.

Name	SIP Entity 1	Protocol	Port	SIP Entity 2	Port	Connection Policy	Deny New Service
------	--------------	----------	------	--------------	------	-------------------	------------------

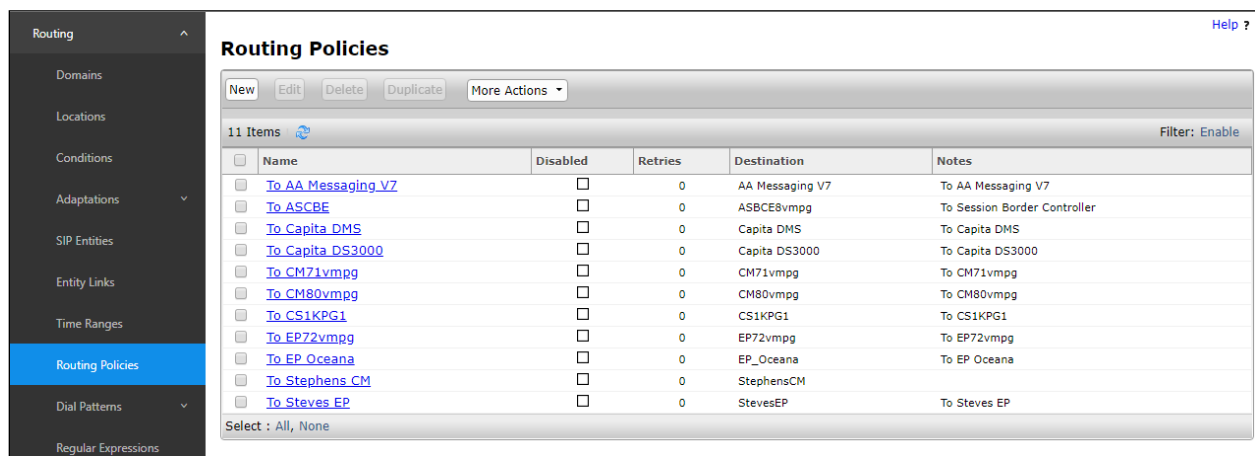

Enter a suitable **Name** for the Entity Link and select the **Session Manager** SIP Entity for **SIP Entity 1** and the newly created Presence OpenGate SIP Entity for **SIP Entity 2**. Ensure that **UDP** is selected for the **Protocol** and that **Port 5060** is used. Click on **Commit** once finished to save the new Entity Link.

The screenshot shows the 'Entity Links' section with one item added. The table has columns: Name, SIP Entity 1, Protocol, Port, SIP Entity 2, Port, Connection Policy, and Deny New Service. The item added is: Name: *SM80vmppg_PresenceOG_, SIP Entity 1: SM80vmppg, Protocol: UDP, Port: *5060, SIP Entity 2: PresenceOG, Port: *5060, Connection Policy: trusted, Deny New Service: unchecked. Below the table is the 'SIP Responses to an OPTIONS Request' section, which still has 0 items. At the bottom are 'Commit' and 'Cancel' buttons.

Name	SIP Entity 1	Protocol	Port	SIP Entity 2	Port	Connection Policy	Deny New Service
*SM80vmppg_PresenceOG_	SM80vmppg	UDP	*5060	PresenceOG	*5060	trusted	<input type="checkbox"/>

6.4 Configure Routing Policy for Presence OpenGate

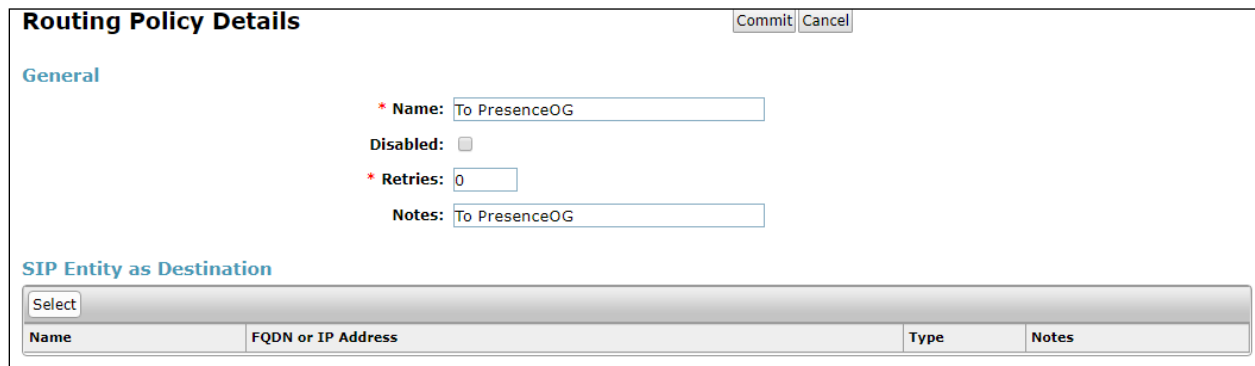

Click on **Routing Policies** in the left window and select **New** in the main window.

	Name	Disabled	Retries	Destination	Notes
<input type="checkbox"/>	To AA Messaging VZ	<input type="checkbox"/>	0	AA Messaging V7	To AA Messaging V7

7. Configure Enghouse Presence OpenGate

Presence OpenGate is part of Presence Suite and is administered via Presence Administrator which resides on the Presence Server. A number of items are set up within Presence Administrator to configure the Presence OpenGate ACD.

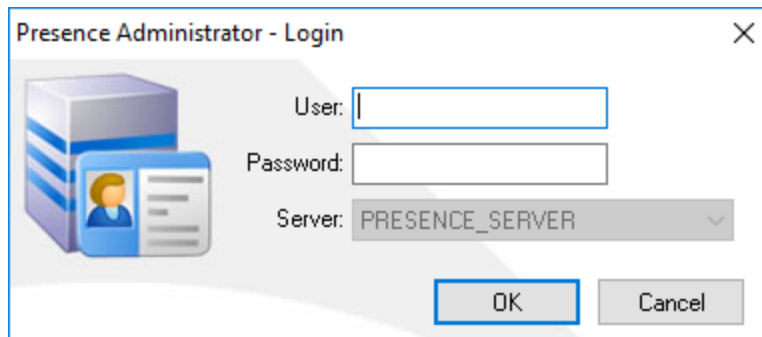

This section will cover the following areas:

- Login to Presence Administrator
- Administer SIP trunk to Avaya Aura® Session Manager
- Presence OpenGate Skill Configuration
- Presence OpenGate Agent Login Configuration
- Presence OpenGate Station Configuration
- Outbound Routes
- Inbound Routes
- Service Extension
- Presence Agent Configuration

Note: The following configuration details for Agent Login and Skillsets are all a part of the Presence OpenGate internal Call Centre and are not referenced anywhere else in these Application Notes.

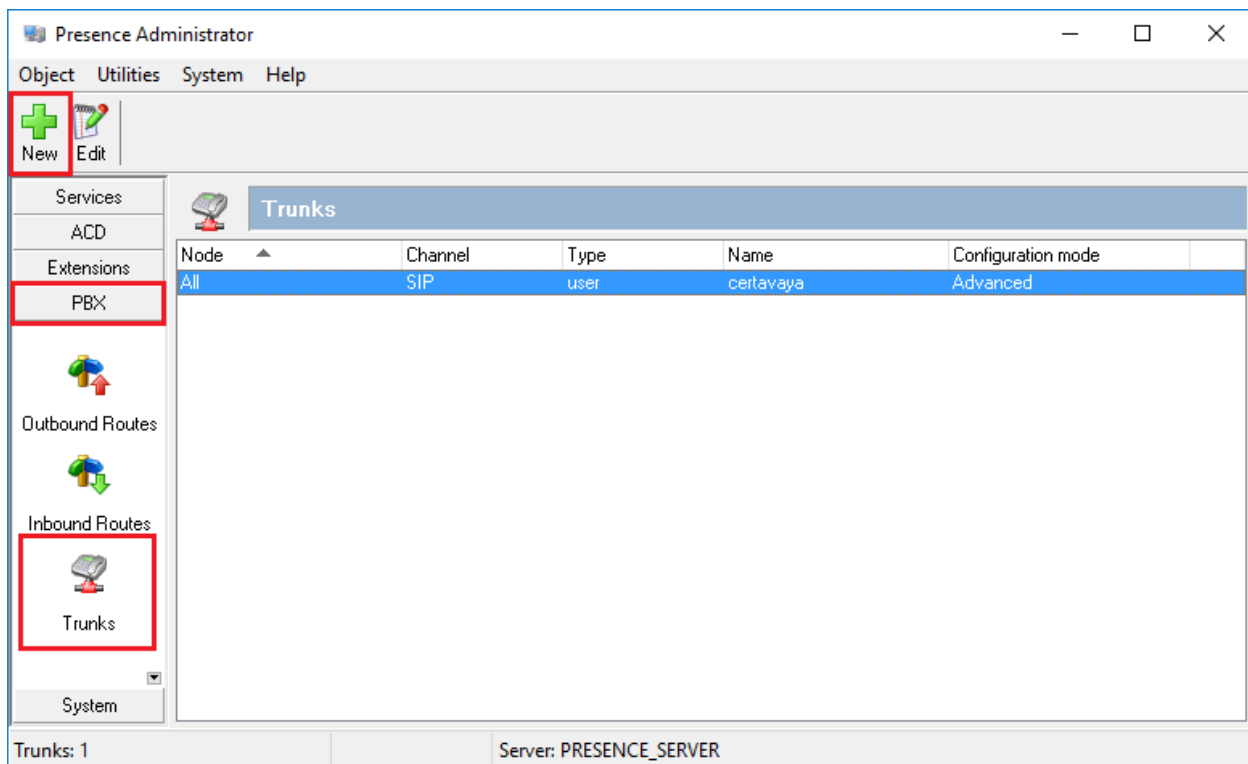

7.1 Login to Presence Administrator

Launch the Presence Administrator application by double clicking the **pcoadmin.exe** icon located in the Presence folder (not shown). The username and password that appear in the **User** and **Password** fields are created during the Presence Server installation.

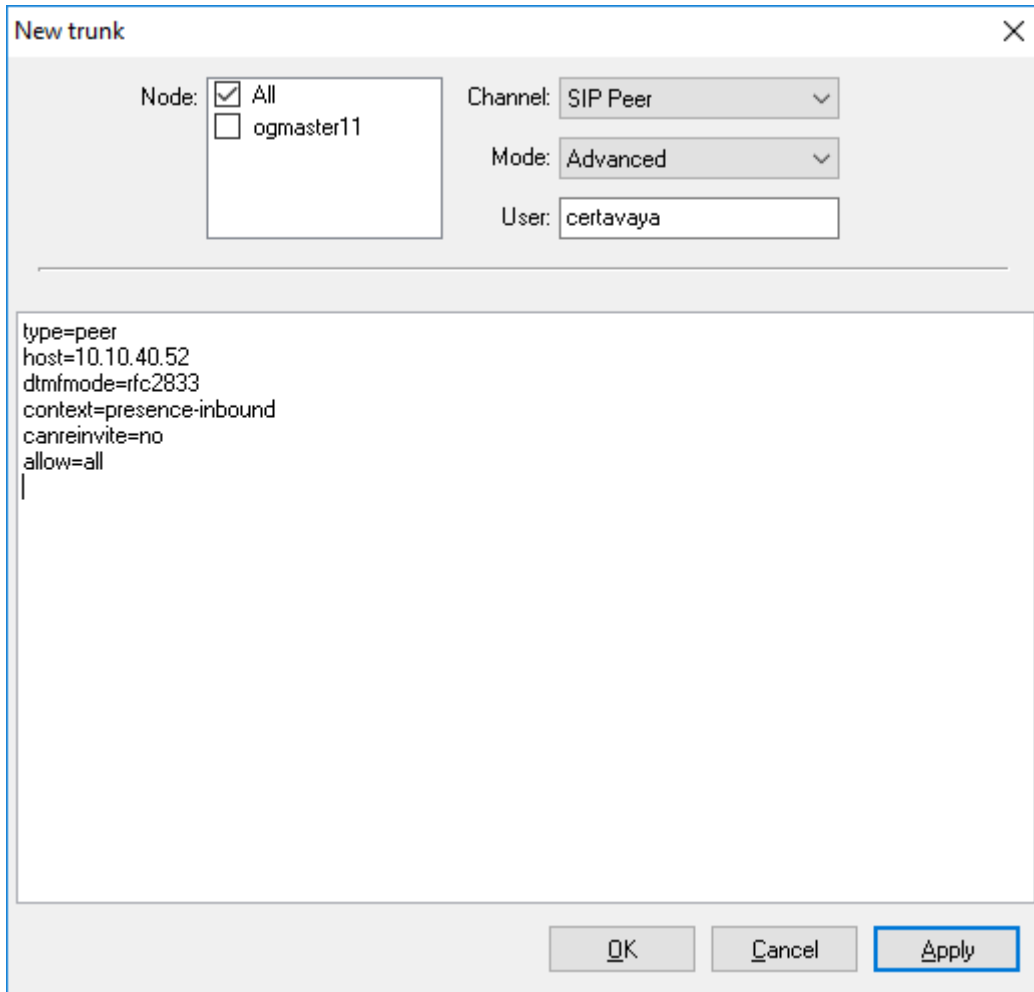

7.2 Administer SIP Trunk to Avaya Aura® Session Manager

In the left window navigate to **PBX→Trunks**. Click on the **New** icon at the top left of the page.

Fill in the information as shown below. Please note that the **Node ogmaster11** has already been established during the install of Presence Presence OpenGate. Select **SIP Peer** as the **Channel** and **Advanced** as the **Mode**. Enter a suitable name for the **User**. Note the following in the main window. Click on **OK** once finished.

- **type = peer**
- **host = IP address of Session Manager**
- **dtmfmode = rfc2833**
- **context = presence-inbound**
- **canreinvite = no**
- **allow = all**

context=presence-inbound
canreinvite=no
allow=all

OK Cancel Apply

7.3 Presence OpenGate Skill Configuration

To configure a skill, from the left-hand side select **ACD** → **Skills** from the Presence Administrator main menu. Click the **New** button.

In the resulting screen, define a **Skill** number and enter a **Name** to identify the skill. In the **Strategy** field, use the two drop down menus to define the selection strategy that will be used by the skill. Set a **Priority** for the skill. All remaining fields can be left with default values. Click **OK** to save the configuration.

Skill: 80000

Name: 80000

Strategy: Skill level measurement Agent available the longest

Priority: 1

RONA: 0 seconds

☐ Answer calls automatically (auto-answer)

OK Cancel Apply

7.4 Presence OpenGate Agent Login Configuration

The login configured here will be used by the agent to login to Presence OpenGate. The Agents will connect to Presence OpenGate via the Presence Suite Agent application. To configure an ACD agent login, from the left-hand side select **ACD** → **Logins** from the Presence Administrator main menu. Click the **Login** button.

Logins

Login	Name	Softphone	CallerID
[All]			

Group: [All] Logins: 0 Server: PRESENCE_SERVER

From the menu on the left side of the screen, select **General**, and enter a numerical ID in the **Logins** field. Define a **Password** for the agent login and repeat in the **Confirm Password** field.

The screenshot shows a dialog box titled "Insert logins" with a close button (X) in the top right corner. On the left is a vertical list of categories: General (checked), Skills, Groups, Softphone, Actions, Internet, and Other. The main area is titled "General" and contains the following fields and options:

- Logins:** A text field containing the value "1000".
- Password:** A text field with four black dots.
- Confirm password:** A text field with four black dots.
- ☐ Agent must change password at next login
- ☒ Agent cannot change password
- ☒ Password never expires

At the bottom right are "OK" and "Cancel" buttons.

From the menu on the left side of the screen select **Skills**, use the drop-down menu to select the **Skill** configured in **Section 7.3** and specify a **Level** for the skill to be applied against this agent login. Click the **Add** button and the skill should appear under **Assigned skills**. Click **OK** to save the login configuration.

The screenshot shows a dialog box titled "Insert logins" with a close button (X) in the top right corner. On the left is a vertical menu with icons and labels: General (checked), Skills (selected), Groups, Softphone, Actions, Internet, and Other. The main area is titled "Skills" and contains a "Skill" dropdown menu showing "80000 - 80000", a "Level" text input field, and an "Add" button. Below this is a section labeled "Assigned skills" containing a table with two columns: "Name" and "Level". The table is currently empty. To the right of the table is a "Remove" button. At the bottom right of the dialog are "OK" and "Cancel" buttons.

Name	Level
------	-------

7.5 Presence OpenGate Station Configuration

Each telephone/endpoint that Presence OpenGate can route calls to must be defined within Presence Administrator as an Agent extension. To define an Agent extension, from the left-hand side navigate to **Extensions** → **Agents** and click the **New** button.

In the resulting screen specify, an **Extension** number that will be used by the Presence Agent application. Note that this number is an existing extension number on Communication Manager. Set a **Name** that the Agent extension will be known as. The password is not required in this case. In the **Channel** field, use the drop-down arrow to select **SIP**. In the following field, define the number that will be dialled and the route used to reach the station. For this test, **certavaya/4000** is configured, this will use trunk “certavaya” to route the call. Note **certavaya** is the SIP Trunk configured in **Section 7.2**.

Add agent extensions [X]

Extension: 4000

Name: 4000

Password: ●●●● ☐ Use extension as password

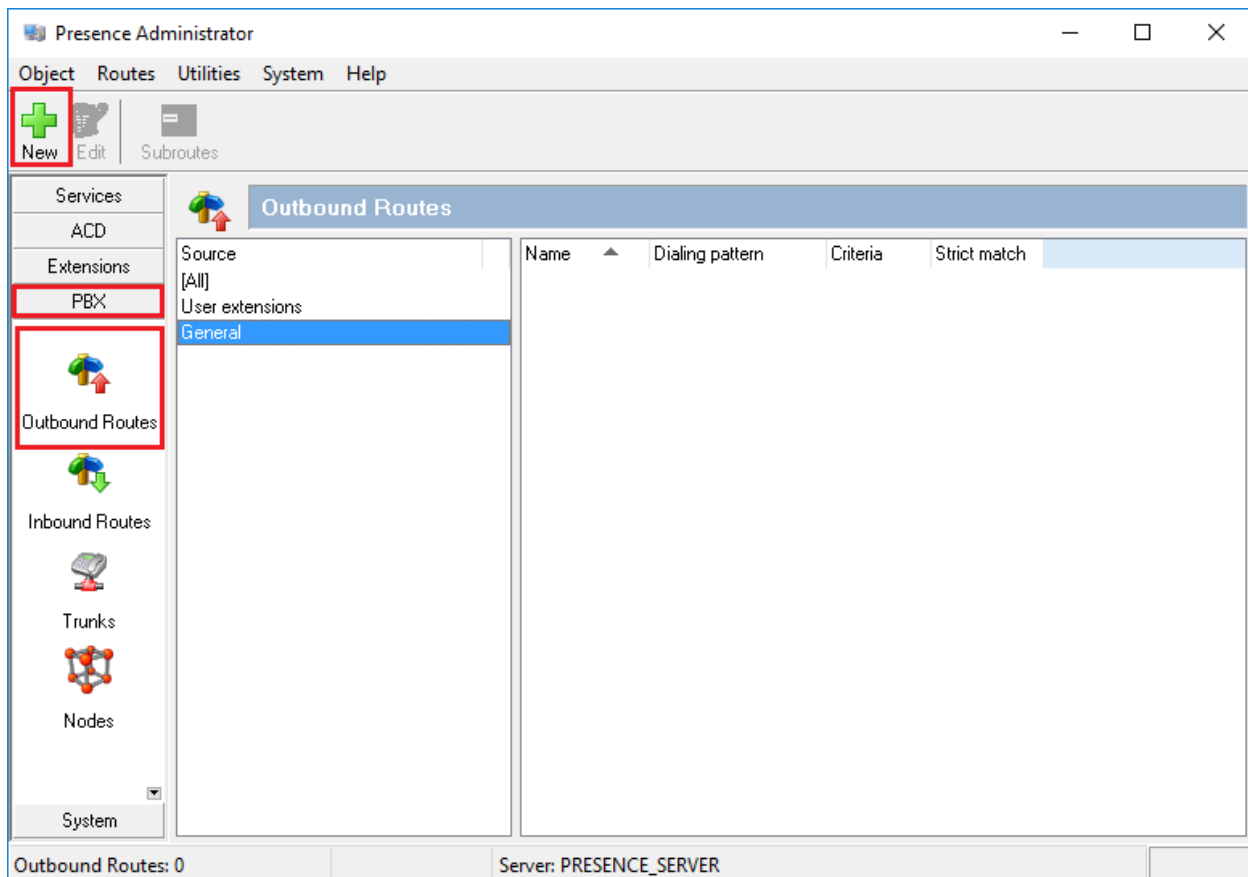

Channel: SIP [v] certavaya/4000

Voice mailbox: [v] Timeout: 25 [▲▼] seconds

[OK] [Apply] [Cancel]

7.6 Outbound Routes

To define an outbound route, from the left-hand side navigate to **PBX → Outbound Routes** and click the **New** button.

In the resulting screen, enter a descriptive name in the **Route** field and in the **Pattern** field define any prefix required by outbound calls. This setup is only used for internal working of Presence OpenGate and is not related to routing calls on Communication Manager. For **Criteria** use the drop-down menu to select the method that will be used to distribute calls among the subroutes configured in the next step. **Priority** was chosen for compliance testing. Click **OK** to save the **outbound route**.

The 'Add outbound route' dialog box contains the following fields and controls:

- Route:** Text field containing 'Route to Avaya'.
- Pattern:** Text field containing '8'.
- Strict match:** An unchecked checkbox.
- Criteria:** A dropdown menu with 'Priority' selected.
- Buttons:** 'OK', 'Cancel', and 'Apply' buttons at the bottom.

To add an outbound subroute, from the outbound routes main page shown above, highlight the outbound route that was added in the previous step and click the subroutes button at the top of the screen. The **Outbound subroutes** window is then displayed as shown below, Click **New**.

Node	Channel type	Channel parameters	Dialing type	Dialing parameters	Weight	Criteria
------	--------------	--------------------	--------------	--------------------	--------	----------

In the resulting window, select the relevant **Node** (**ogmaster11**, created during the Presence OpenGate install), and under **Channel** select **SIP**. For **Dialing string** use the drop-down menu to select **Remove Dial Pattern** leaving the secondary field blank. This informs Presence OpenGate to remove the “8” used to define the pattern (also created during the Presence OpenGate install) before routing the call via the **certavaya** trunk.

Node: ogmaster11

Channel: SIP Channel parameters: certavaya ☐ Ringback from provider

Dialing string: Remove Dial Patterns

Weight: 0

Billing code:

Outgoing calls identification

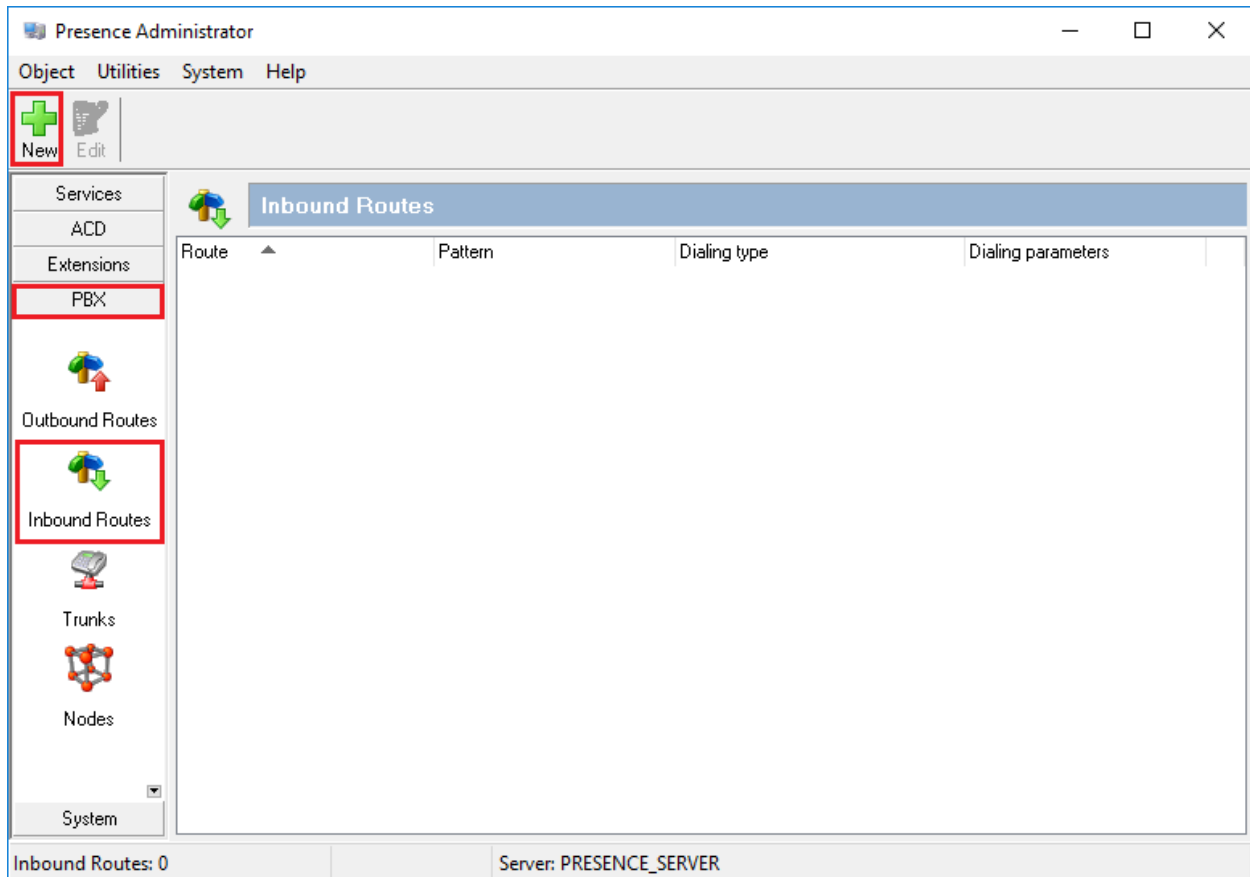

☐ Enable outgoing calls identification

Phone no: Description:

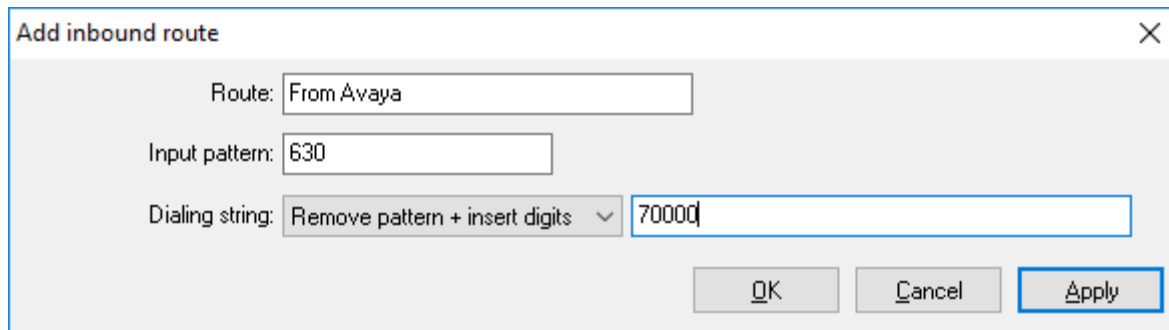

OK Cancel Apply

7.7 Inbound Routes

Inbound routes are used to map dialed numbers received to internal extensions within Presence OpenGate. To define an inbound route, from the left-hand side navigate to **PBX → Inbound Routes** and click the **New** button.

In the resulting window enter a descriptive name for **Route**. In this example any calls beginning with 630x will route to **70000** (this is simply internal routing for Presence OpenGate).

The 'Add inbound route' dialog box contains the following fields and controls:

- Route:** Text field containing 'From Avaya'.
- Input pattern:** Text field containing '630'.
- Dialing string:** A dropdown menu set to 'Remove pattern + insert digits' and a text field containing '70000'.
- Buttons:** 'OK', 'Cancel', and 'Apply' buttons at the bottom right.

7.8 Service Extension

Open Gate uses service extensions to direct calls to services. To define a service extension, from the left-hand side navigate to **Extensions** → **Service** and click the **New** button.

In the resulting windows enter the extension number in the **Extension** field and give it a descriptive name in the **Name** field. Select the **Basic** mode under **Mode** and select **Skill** create in **Section 7.4**.

Add service extension [X]

Extension: Name:

Mode:

Ringback: seconds

☐ Enable adjunct routing

Welcome:

Skill: Priority:

Wait:

Music: ☐ Play music on hold before speech

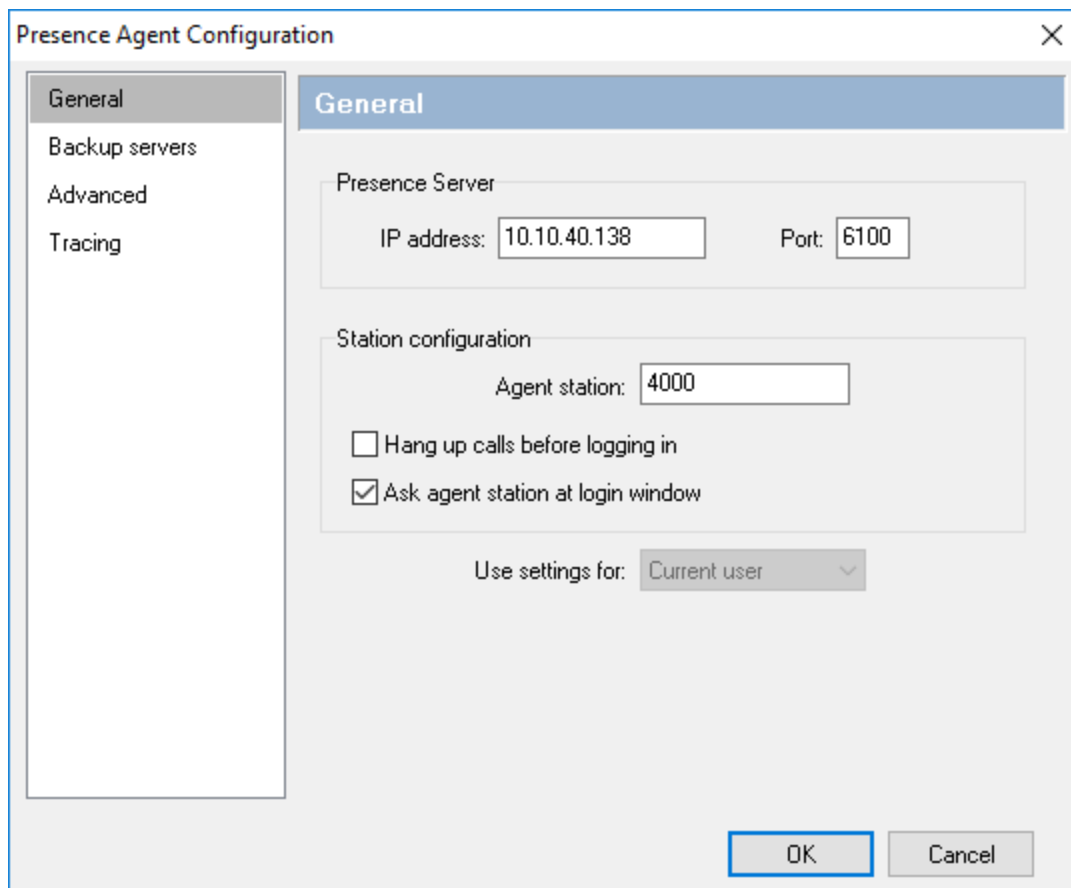

Wait time: seconds

☐ Repeat loop

7.9 Presence Agent Configuration

The following steps are carried out on the Presence Agent PC. Prior to installing the Presence agent, ensure that the DBExpress driver (dpexpoda.dll) is located in the C:\Windows\System32 directory. If not, contact Enghouse support outlined in **Section 2.3** of these Application Notes. The DBExpress driver allows the agent application to communicate with the Presence Suite/Presence OpenGate database.

Launch the **Presence Agent Configuration** application by double clicking the **pcoagentcfg.exe** located in the C: \Presence folder (not shown). Enter the **Presence Server IP address** as **10.10.40.138**. The **Presence Server port** can be left as the default value of **6100**. Enter the extension of the station that will be used with this workstation in the **Agent station** field. Check the **Hang up calls before logging in** check box is not selected. In the field **Use settings for** choose **Machine** from the drop-down menu. Click **OK**. This step is needed for each agent configured; only the agent station field will vary.

The screenshot shows the 'Presence Agent Configuration' dialog box with the 'General' tab selected. The 'General' tab is highlighted in the left sidebar and the main content area. The 'Presence Server' section contains two text boxes: 'IP address' with the value '10.10.40.138' and 'Port' with the value '6100'. The 'Station configuration' section contains a text box for 'Agent station' with the value '4000'. Below this are two checkboxes: 'Hang up calls before logging in' (unchecked) and 'Ask agent station at login window' (checked). At the bottom of the configuration area is a dropdown menu labeled 'Use settings for:' with 'Current user' selected. The 'OK' and 'Cancel' buttons are at the bottom right of the dialog.

Field	Value
Presence Server IP address	10.10.40.138
Presence Server Port	6100
Agent station	4000
Hang up calls before logging in	<input type="checkbox"/>
Ask agent station at login window	<input checked="" type="checkbox"/>
Use settings for	Current user

8. Verification Steps

This section provides steps that may be performed to verify that the solution is configured correctly.

8.1 Verify Enghouse Presence OpenGate

To receive calls from Presence OpenGate, users must log in to the system via the Presence Agent application. This section describes the steps required to connect to Presence OpenGate as an agent to receive ACD calls.

Launch the Presence agent configuration application by double clicking the **pcoagent.exe** located in the Presence folder. Enter the agent **Login** and **Password** configured in **Section 7.4** and click on **OK**.

A task bar is present at the top of the Agent PC. Click on the green arrow to put the agent into an available state.

The information status on the task bar goes to **Available** indicating the agent is ready to receive calls.

8.2 Verify Avaya Aura® Communication Manager

The following steps can be taken if there are any issues with calls being made. This should help verify the links between the products. From the SAT interface, verify the status of the SIP trunk groups by using the **status trunk n** command, where “n” is the trunk group number administered in **Section 5.5**. Verify that all trunks are in the **in-service/idle** state as shown below.

```
status trunk 1

                                TRUNK GROUP STATUS

Member      Port      Service State      Mtce Connected Ports
                               Busy

0001/0001 T00001  in-service/idle    no
0001/0002 T00002  in-service/idle    no
0001/0003 T00003  in-service/idle    no
0001/0004 T00004  in-service/idle    no
0001/0005 T00005  in-service/idle    no
0001/0006 T00006  in-service/idle    no
0001/0007 T00007  in-service/idle    no
0001/0008 T00008  in-service/idle    no
0001/0009 T00009  in-service/idle    no
0001/0010 T00010  in-service/idle    no
```

Verify the status of the SIP signaling groups by using the **status signaling-group n** command, where “n” is the signaling group number administered in **Section 5.5**. Verify that the signaling group is **in-service** as indicated in the **Group State** field shown below.

```
status signaling-group 1

                                STATUS SIGNALING GROUP

      Group ID: 1
      Group Type: sip

      Group State: in-service
```

8.3 Verify Presence OpenGate SIP Entity is up

Log into System Manager as per **Section 6**. Navigate to **Elements** and click on **Session Manager**.

The screenshot shows the Avaya Aura System Manager 8.0 interface. The 'Elements' menu is expanded, and 'Session Manager' is selected. The dashboard displays various system metrics and status information.

Resource	Value
opt	7
var	1
emdata	14

Property	Value
License Status	Active
Deployment Type	VMware
Multi-Tenancy	DISABLED
OOBM State	DISABLED
Hardening Mode	Standard

Elements	Count	Sync Status
CM	1	Green
