---

# **Application Notes for Configuring the Polycom VVX 500/600 running UC software release 5.0.0.7403 with Avaya Aura® Session Manager and Avaya Aura® Communication Manager Release 6.3 - Issue 1.0**

## **Abstract**

These Application Notes describe a solution for supporting interoperability between the Polycom VVX 500/600 running UC software release 5.0.0.7403 with Avaya Aura® Session Manager and Avaya Aura® Communication Manager release 6.3. Emphasis of the testing was to verify voice calls of VVX 500/600 as a SIP endpoint registered to Avaya Aura® Session Manager.

Information in these Application Notes has been obtained through DevConnect Compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

# 1. Introduction

These Application Notes provide detail configurations of the Polycom VVX 500/600 (hereafter referred to as VVX 500/600) with a SIP infrastructure consisting of Avaya Aura® Session Manager (hereafter referred to as Session Manager) and Avaya Aura® Communication Manager (hereafter referred to as Communication Manager). During compliance testing, VVX 500/600 successfully registered with Session Manager, established calls with other Avaya telephones and all the applicable telephony features were executed on the VVX 500/600, where applicable, to ensure the interoperability with Communication Manager.

## 2. General Test Approach and Test Results

The general test approach was to have the VVX 500/600 register to Session Manager. Calls were then placed from Avaya telephone clients/users to and from the VVX 500/600. Other telephony features such as busy, hold, DTMF, transfer, conference, video (where applicable) and codec negotiation were also verified.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute a full product performance or feature testing performed by third party vendors, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a third party solution.

### 2.1. Interoperability Compliance Testing

Interoperability compliance testing covered the following features and functionality:

- Registration of VVX 500/600 to Session Manager.
- Call establishment of VVX 500/600 with Avaya telephones.
- Telephony features: Basic calls, conference, blind and consultative transfer, DTMF (dual tone multi frequency), leaving and retrieving voicemail message, busy, hold, call forward busy, call forward unconditional, call forward no answer, MWI (Message Waiting Indicator), and Do not Disturb (DND).
- Codec negotiation – G.711, G.729 and G.722.
- Incoming and Outgoing calls to VVX 500/600 from PSTN.
- Video call between two VVX 500/600 phones.

**Note:** Based on the micro-processor type, VVX 500 and VVX 600 belong to the same family and therefore the test results of VVX 500 also holds good for VVX 600. During compliance testing, only VVX 500 was tested.

## 2.2. Test Results

The objectives outlined in **Section 2.1** were verified. VVX 500/600 was registered to Session Manager successfully. Calls have been made between Communication Manager telephones and VVX 500/600 with clear voice path. All executed test cases passed with the following observations,

- On Communication Manager only the option of G.722 – 64 is available and since this option is not available from the VVX 500/600 codec list, this codec option could not be tested.
- Call Forward on Busy (CFB) has to be configured on Communication Manager at the set level and not through the Polycom Web Configuration Utility. However Call Forward Unconditional (CFU) and Call Forward No Answer (CFNA) can be configured using the Polycom Web Configuration Utility.

## 2.3. Support

Technical support for the Polycom VVX 500/600 can be obtained through Polycom global technical support:

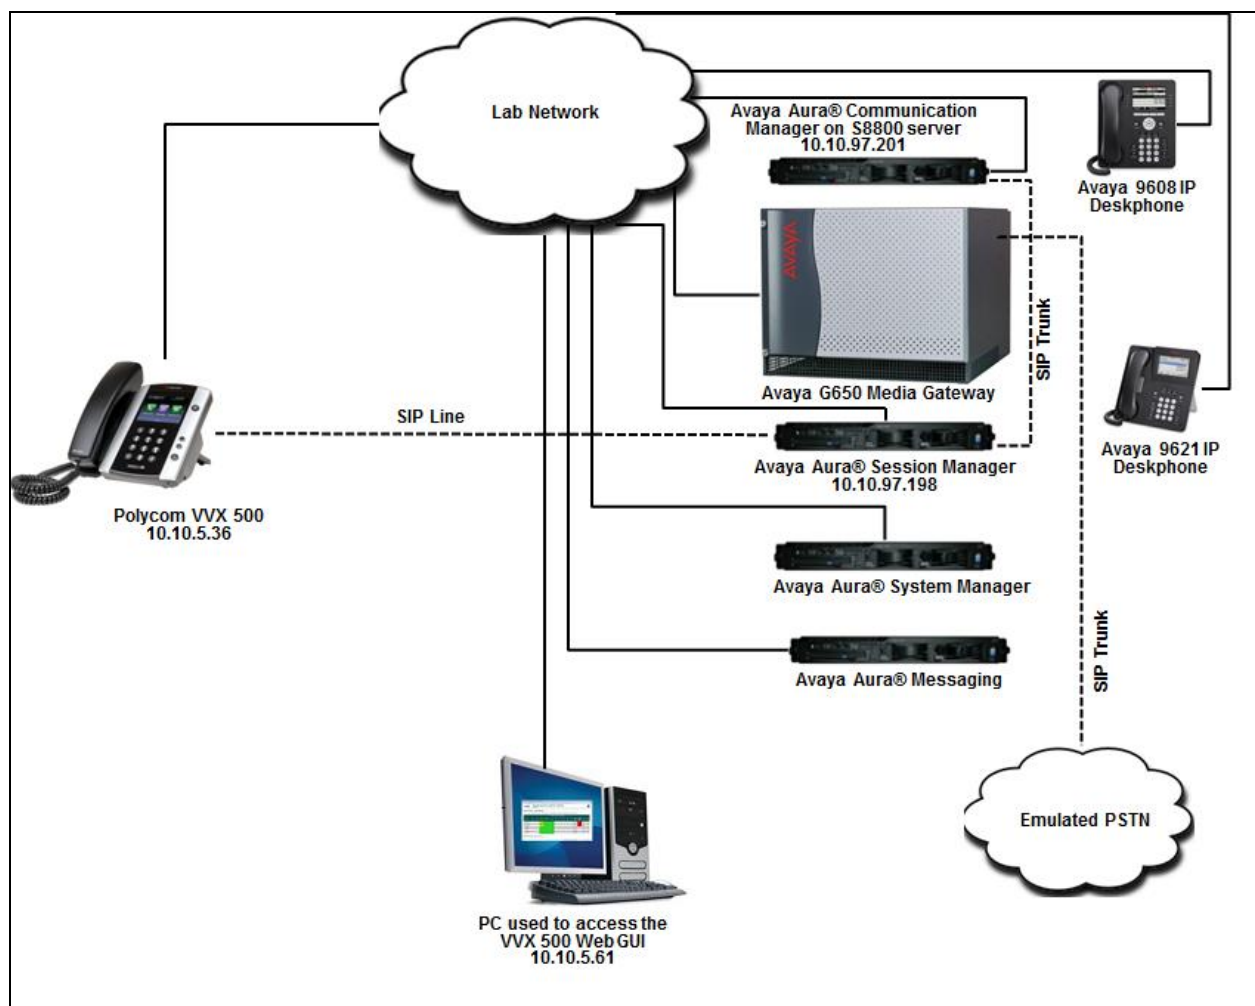

- Phone: 1-888-248-4143 or 1-408-474-2067
- Web: <http://support.polycom.com>

### 3. Reference Configuration

**Figure 1** illustrates a sample configuration with an Avaya SIP-based network that includes the following Avaya products:

- Communication Manager running on an Avaya S8800 Server with a G650 Media Gateway.
- Session Manager connected to Communication Manager via a SIP trunk and acting as a Registrar/Proxy for SIP telephones.
- System Manager used to configure Session Manager.
- Avaya Aura® Messaging providing voice mail service for the SIP endpoints.

The VVX 500/600 registers with Session Manager and is configured as an Off-PBX Station (OPS) on Communication Manager. Polycom Web Configuration Utility is used to manage the configuration of the VVX 500/600 phone.

**Figure 1: Network Configuration Diagram**

## 4. Equipment and Software Validated

The following equipment and software/firmware were used for the reference configuration:

Equipment/Software	Release/Version
Avaya Aura® Communication Manager running on Avaya S8800 Server and G650 Media Gateway	6.3-03.0.124.0
Avaya Aura® System Manager running on an Avaya S8800 Server	6.3.0-FP2
Avaya Aura® Session Manager running on S8800 Server.	6.3.2.0.632023
Avaya Aura® Messaging	6.1
Avaya 9620G IP (SIP) Telephone	6.2.0
Avaya 9608 IP ( H.323) Telephone	6.0.2
Polycom UC Software for VVX 500	5.0.0.7403
Polycom Web Configuration Utility	Windows XP Professional OS

## 5. Configure Avaya Aura® Communication Manager

This section describes the steps for configuring an Off-PBX Station (OPS) that can be used for VVX 500/600 and configuring a SIP trunk between Communication Manager and Session Manager. **Section 5.3** covers the station configuration that will be used by VVX 500/600. Use the System Access Terminal (SAT) to configure Communication Manager and log in with the appropriate credentials.

### 5.1. Verify OPS and SIP Trunk Capacity

Using the SAT, verify that the Off-PBX Telephones (OPS) and SIP Trunks features are enabled on the **system-parameters customer-options** form. The license file installed on the system controls these options. If a required feature is not enabled, contact an authorized Avaya sales representative.

On Page 1, verify that the number of OPS stations allowed in the system is sufficient for the number of SIP endpoints that will be deployed.

```
display system-parameters customer-options                               Page 1 of 11

OPTIONAL FEATURES

G3 Version: V16                                     Software Package: Enterprise
Location: 2                                           System ID (SID): 1
Platform: 28                                          Module ID (MID): 1

                                         USED
Platform Maximum Ports: 65000 213
Maximum Stations: 41000 37
Maximum XMOBILE Stations: 41000 0
Maximum Off-PBX Telephones - EC500: 41000 4
Maximum Off-PBX Telephones - OPS: 41000 24
Maximum Off-PBX Telephones - PBFMC: 41000 0
Maximum Off-PBX Telephones - PVFMC: 41000 0
Maximum Off-PBX Telephones - SCCAN: 0 0
Maximum Survivable Processors: 313 1

(NOTE: You must logoff & login to effect the permission changes.)
```

On **Page 2** of the **system-parameters customer-options** form, verify that the number of SIP trunks supported by the system is sufficient.

display system-parameters customer-options		Page 2 of 11
OPTIONAL FEATURES		
IP PORT CAPACITIES		USED
Maximum Administered H.323 Trunks:	12000	0

Maximum TN2602 Boards with 320 VoIP Channels:	128	1
Maximum Number of Expanded Meet-me Conference Ports:	300	0
(NOTE: You must logoff & login to effect the permission changes.)		

## 5.2. Configure SIP Trunk

In the **IP Node Names** form, assign an IP address and host name for the S8800 Server processor, and Session Manager. The host names will be used throughout the other configuration screens of Communication Manager.

display node-names ip		IP NODE NAMES
Name	IP Address	
AES62	10.10.98.17	
AVAYARDTT	10.10.98.68	
<b>CLAN1</b>	<b>10.10.97.217</b>	
CLAN2	10.10.97.238	
DevCM3	10.10.4.9	
GW	10.10.97.193	
InteropSM62	10.10.1.11

Use 'list node-names' command to see all the administered node-names		
Use 'change node-names ip xxx' to change a node-name 'xxx' or add a node-name		

In the **IP Network Region** form, the **Authoritative Domain** field is configured to match the domain name configured on Session Manager. In this configuration, the domain name is *bvwdev.com*. By default, **Intra-region IP-IP Direct Audio** and **Inter-region IP-IP Direct Audio** (shuffling) is enabled to allow audio traffic to be sent directly between IP endpoints without using media resources in the Avaya G650 Media Gateway. The **IP Network Region** form also specifies the **Codec Set** to be used for calls routed over the SIP trunk to Session Manager. This codec set is used when its corresponding network region (i.e., IP Network Region '1') is specified in the SIP signaling group.

```

display ip-network-region 1                                     Page 1 of 20

      Idle Traffic Interval (sec): 20
      Keep-Alive Interval (sec): 5
      Keep-Alive Count: 5

```

In the **IP Codec Set** form, select the audio codec type supported for calls routed over the SIP trunk to VVX 500/600. The form is accessed via the **change ip-codec-set 1** command. Note that IP codec set '1' was specified in IP Network Region '1' shown above. The default settings of the **IP Codec Set** form are shown below. However, the **IP Codec Set** form may specify multiple codecs, including G.711, G.729A, and G.722, which are supported by VVX 500/600.

```

display ip-codec-set 1                                         Page 1 of 2

Prior to configuring a SIP trunk group for communication with Session Manager, a SIP signaling group must be configured. Configure the Signaling Group form as follows:

- Set the **Group Type** field to *sip*.
- Set the **IMS Enabled** field to *n*.
- The **Transport Method** field was set to *tcp*. Specify the Communication Manager Processor Interface (procr) and the Session Manager as the two ends of the signaling group in the **Near-end Node Name** field and the **Far-end Node Name** field, respectively. These field values are taken from the **IP Node Names** form.
- Ensure that the recommended TCP port value of *5060* is configured in the **Near-end Listen Port** and the **Far-end Listen Port** fields.
- The preferred codec for the call will be selected from the IP codec set assigned to the IP network region specified in the **Far-end Network Region** field.
- Enter the domain name of Session Manager in the **Far-end Domain** field. In this configuration, the domain name is *bvwdev.com*.
- The **Direct IP-IP Audio Connections** field was enabled on this form.
- The **DTMF over IP** field should be set to the default value of *rtp-payload*.  
Communication Manager supports DTMF transmission using RFC 2833. Retain default values for all other fields.

display signaling-group 1		Page 1 of 2

```

### 5.3. Configure Stations

Use the **add station** command to add a station for each VVX 500/600 phone to be supported. Use *9620SIP* for the **Station Type** and include the **Coverage Path** for voice mail, if applicable. The **Name** field is optional. Use the default values for the other fields on Page 1. The SIP station can also be configured automatically by Session Manager as described in **Section 6.7**.

display station 53113		Page 1 of 6

Use the **change off-pbx-telephone station-mapping** command to map Communication Manager extensions (e.g., 53113) to the same extension configured in Session Manager. Enter the field values shown. For the sample configuration, the **Trunk Selection** field is set to *aar* so that AAR call routing is used to route calls to Session Manager. AAR call routing configuration is not shown in these Application Notes. The **Configuration Set** value can reference a set that has the default settings.

## 6. Configure Avaya Aura® Session Manager

This section provides the procedures for configuring Session Manager. The procedures include adding the following items:

- SIP domain.
- Logical/physical Locations that can be occupied by SIP Entities.
- SIP Entities corresponding to Session Manager and Communication Manager.
- Entity Links, which define the SIP trunk parameters used by Session Manager when routing calls to/from SIP Entities.
- Application Sequence.
- Define Communication Manager as Administrable Entity (i.e., Managed Element).
- Session Manager, to be managed by System Manager.
- Add SIP Users.

Configuration is accomplished by accessing the browser-based GUI of System Manager using the URL “https://<ip-address>/SMGR”, where <ip-address> is the IP address of System Manager. Log in with the appropriate credentials and accept the Copyright Notice.

The main screen of System Manager is seen as shown below.

## 6.1. Specify SIP Domain

Add the SIP domain for which the communications infrastructure will be authoritative. Navigate to **Routing** → **Domains** on the left and clicking the **New** button on the right. The following screen will then be shown. Fill in the following:

- **Name:** The authoritative domain name (e.g., *bvwdev.com*).
- **Notes:** Descriptive text (optional).

Click **Commit** (not shown).

Since the sample configuration does not deal with any other domains, no additional domains need to be added.

The screenshot shows the Avaya Aura System Manager 6.3 web interface. The left sidebar contains a navigation menu with 'Routing' expanded and 'Domains' selected. The main content area is titled 'Domain Management' and includes a 'New' button. Below the buttons is a table with one item, 'bvwdev.com', which is highlighted with a red box. The table has columns for 'Name', 'Type', and 'Notes'. The 'Notes' column contains the text 'The main domain'.

Name	Type	Notes
bvwdev.com	sip	The main domain

## 6.2. Add Locations

Locations can be used to identify logical and/or physical locations where SIP Entities reside for purposes of bandwidth management. To add a location, select **Locations** on the left and click on the **New** button on the right (not shown). The following screen will then be shown. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **Notes:** Descriptive text (optional).

Under *Location Pattern*:

- **IP Address Pattern:** A pattern used to logically identify the location.
- **Notes:** Descriptive text (optional).

The screen below shows addition of the *Belleville* location, which includes the Communication Manager and Session Manager. Click **Commit** to save the Location definition. Retain default values for all other fields.

## 6.3. Add SIP Entities

In the sample configuration, a SIP Entity is added for Session Manager and Communication Manager.

### 6.3.1. Avaya Aura® Session Manager

A SIP Entity must be added for Session Manager. To add a SIP Entity, select **SIP Entities** on the left and click on the **New** button on the right (not shown). The following screen is displayed. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **FQDN or IP Address:** IP address of the signaling interface on Session Manager.
- **Type:** Specify *Session Manager*.
- **Location:** Select one of the locations defined previously.
- **Time Zone:** Time zone for this location.

The screenshot displays the Avaya Aura® System Manager 6.3 web interface. The top navigation bar includes the Avaya logo, the title "Avaya Aura® System Manager 6.3", and a user status area indicating "Last Logged on at May 29, 2013 5" with links for "Help | About | Change Password | Log off". A breadcrumb trail shows "Home / Elements / Routing / SIP Entities". On the left, a sidebar menu lists various configuration categories, with "SIP Entities" highlighted. The main content area is titled "SIP Entity Details" and contains a "General" tab. The form fields are as follows: "Name" (text box with "DevSM"), "FQDN or IP Address" (text box with "10.10.97.198"), "Type" (dropdown menu with "Session Manager" selected), "Notes" (text box with "SIP Entity for Session Manager"), "Location" (dropdown menu with "Belleville" selected), "Outbound Proxy" (dropdown menu), "Time Zone" (dropdown menu with "America/Toronto" selected), "Credential name" (text box), and "SIP Link Monitoring" (dropdown menu with "Use Session Manager Configuration" selected). "Commit" and "Cancel" buttons are located at the top right of the form area.

Under *Port*, click **Add**, and then edit the fields in the resulting new row as shown below:

- **Port:** Port number on which the system listens for SIP requests.
- **Protocol:** Transport protocol to be used to send SIP requests. During compliance testing only TCP was used.
- **Default Domain:** The domain used for the enterprise (e.g. *bvwdev.com*).

Defaults can be used for the remaining fields. Click **Commit** to save each SIP Entity definition.

### 6.3.2. Avaya Aura® Communication Manager

A SIP Entity must be added for Communication Manager. To add a SIP Entity, select **SIP Entities** on the left and click on the **New** button on the right (not shown). The following screen is displayed. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **FQDN or IP Address:** IP address of the signaling interface (e.g., procr interface) on the telephony system.
- **Type:** Specify *CM*.
- **Location:** Select one of the locations defined previously.
- **Time Zone:** Time zone for this location.

Retain default values for all other fields. Click **Commit** to save each SIP Entity definition.

The screenshot displays the Avaya Aura System Manager 6.3 web interface. The top navigation bar includes the Avaya logo, the title "Avaya Aura® System Manager 6.3", and a user status indicator "Last Logged on at May 29, 2013 3:10 PM" with links for "Help", "About", "Change Password", and "Log off". A breadcrumb trail shows "Home / Elements / Routing / SIP Entities". On the left, a sidebar menu lists various configuration areas: Routing, Domains, Locations, Adaptations, SIP Entities (highlighted), Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main content area is titled "SIP Entity Details" and features a "General" tab. The form contains several fields: "Name" (DevCM), "FQDN or IP Address" (10.10.97.201), "Type" (CM), "Notes" (CM SIP Entity in the main lab), "Adaptation" (empty), "Location" (Belleville), "Time Zone" (America/Toronto), "Override Port & Transport with DNS SRV" (unchecked), "SIP Timer B/F (in seconds)" (4), "Credential name" (empty), "Call Detail Recording" (both), "Loop Detection Mode" (Off), and "SIP Link Monitoring" (Use Session Manager Configuration). "Commit" and "Cancel" buttons are located at the top right of the form area.

## 6.4. Add Entity Link

The SIP trunk from Session Manager to Communication Manager is described by an Entity link. To add an Entity Link, select **Entity Links** on the left and click on the **New** button on the right (not shown). Fill in the following fields in the new row that is displayed:

- **Name:** A descriptive name
- **SIP Entity 1:** Select the Session Manager.
- **Protocol:** Select the appropriate protocol.
- **Port:** Port number to which the other system sends SIP requests.
- **SIP Entity 2:** Select the name of Communication Manager.
- **Port:** Port number on which the other system receives SIP requests.
- **Connection Policy** Check this box. *Note: If this box is not checked, calls from the associated SIP Entity specified in **Section Error! Reference source not found.** will be denied.*

Click **Commit** to save the Entity Link definition.

## 6.5. Define Communication Manager as Managed Element

Before adding SIP users, Communication Manager must be added to System Manager as a managed element. This action allows System Manager to access Communication Manager over its administration interface. Using this administration interface, System Manager will notify Communication Manager when new SIP users are added.

To define Communication Manager as a managed element, under **Services** (refer to screen shot in **Section 6.3**) navigate to **Inventory → Manage Elements** on the left and click on the **New** button on the right (not shown). In the **Application Type** field that is displayed (not shown), select *Communication Manager*.

Screen below shows an already added Communication Manager. Enter the values as follows and retain default values for all other fields.

Under *General Attributes (G)*:

- **Name:** Enter an identifier for Communication Manager.
- **Description:** Enter an appropriate description.
- **Hostname or IP Address:** Enter the IP address of the administration interface for Communication Manager.
- **Login:** A login name.
- **Password:** Enter password.
- **Confirm Password:** Confirm above entered password.

Click **Commit** to save the settings.

## 6.6. Add Application Sequence

Define an application for Communication Manager. Under **Elements** (refer to screen shot in **Section 6.3**) navigate to **Session Manager** → **Application Configuration** → **Applications** on the left and click on the **New** button on the right (not shown). Fill in the following fields:

- **Name:** An appropriate name.
- **SIP Entity:** Select the Communication Manager SIP entity.
- **CM System for SIP Entity:** Select the Communication Manager managed element.
- **Description:** An appropriate description.

Click **Commit** to save the Application definition.

## 6.7. Add SIP Users

Add a SIP user corresponding to the VVX 500/600 as defined in **Section 5.3**. Alternatively, use the option to automatically generate the SIP stations on Communication Manager Feature/Evolution Server when adding a new SIP user. Under **Users** (refer to screen shot in **Section 6.3**) navigate to **User Management** → **Manage Users** (not shown) on the left and click on the **New** button on the right (not shown).

Under the **Identity** tab enter values for the following required attributes for a new SIP user in the new user form:

- **Last Name:** Enter the last name of the user.
- **First Name:** Enter the first name of the user.
- **Login Name:** Enter <extension>@<sip domain> of the user (e.g., 53113@bvwdev.com).
- **Authentication Type:** Select *Basic* (by default).
- **Password:** Password to be used by the SIP User.
- **Confirm Password:** Re-enter the password from above.

The screen below shows the information when adding a new SIP user during compliance testing.

In the **CM Endpoint Profile** section, fill in the following fields:

- **System:** Select the managed element corresponding to Communication Manager.
- **Profile Type:** Select Endpoint.
- **Extension:** Enter extension number of SIP user.
- **Template:** Select template for type of SIP phone.

Retain default values for all other fields.

The screen below shows the configuration used for compliance testing.

The screenshot shows a web-based configuration form for a 'CM Endpoint Profile'. At the top, there is a section header 'CM Endpoint Profile' with a dropdown arrow. Below this, there are two red-bordered boxes. The first box contains the 'System' field (set to 'DevCM') and the 'Profile Type' field (set to 'Endpoint'). Below these boxes is the 'Use Existing Endpoints' checkbox, which is unchecked. The second red-bordered box contains the 'Extension' field (set to '53113') with a magnifying glass icon and an 'Endpoint Editor' button, and the 'Template' field (set to '9620SIP\_DEFAULT\_CM\_6\_3'). Below the second box are several other fields: 'Set Type' (set to '9620SIP'), 'Security Code' (empty), 'Port' (set to 'IP'), 'Voice Mail Number' (empty), and 'Preferred Handle' (set to '(None)'). At the bottom of the form are three checkboxes: 'Enhanced Callr-Info display for 1-line phones' (unchecked), 'Delete Endpoint on Unassign of Endpoint from User or on Delete User' (checked), and 'Override Endpoint Name' (checked).

Click **Commit** (not shown) to save the User Profile.

## 6.8. Add Session Manager

To complete the configuration, adding Session Manager will provide the linkage between System Manager and Session Manager. Under **Elements** (refer to screen shot in **Section 6.3**) navigate to **Session Manager** → **Session Manager Administration** (not shown). Then click **New** (not shown), and fill in the fields as described below and shown in the following screen:

Under *General*:

- **SIP Entity Name:** Select the name of the SIP Entity added for Session Manager.
- **Description:** Descriptive comment (optional).
- **Management Access Point Host Name/IP:** Enter the IP address of the Session Manager management interface.

Under *Security Module*:

- **Network Mask:** Enter the network mask corresponding to the IP address of Session Manager.
- **Default Gateway:** Enter the IP address of the default gateway for Session Manager.

Retain default values for the remaining fields. Click **Save** to add this Session Manager (not shown).

## 7. Polycom Web Configuration Utility

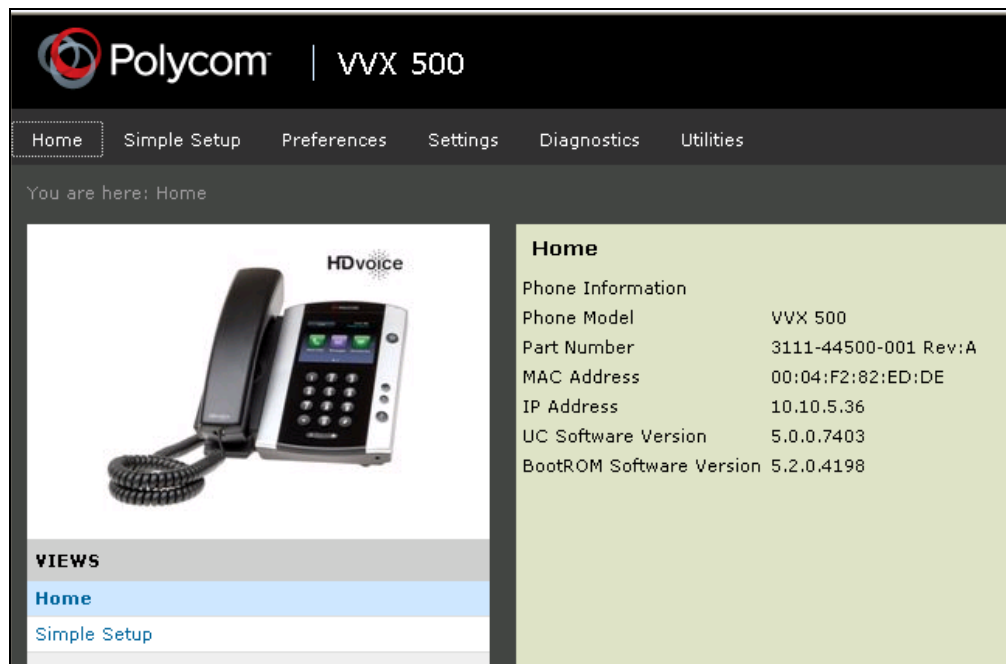

This section shows how to log in to the home page of Polycom Web Configuration Utility that is required to configure the VVX 500/600 phone.

Find the IP address assigned to the VVX 500/600 phone and type it into the URL address bar of a web browser. The web configuration utility login interface will be displayed as shown below. Select the **Admin** radio button and type in the default password of **456**.

The image shows the Polycom Web Configuration Utility login page. At the top, there is a header with the Polycom logo and the text "Polycom Web Configuration Utility". Below the header, there is a central box titled "Welcome to Polycom Web Configuration Utility". Inside this box, there is a form titled "Enter Login Information". The form has two radio buttons: "Admin" (selected) and "User". Below the radio buttons, there is a "Password" field with a text input box. At the bottom of the form, there are two buttons: "Submit" and "Reset".

Click **Submit**, the homepage of the Polycom VVX 500 is shown below.

The image shows the Polycom VVX 500 homepage. At the top, there is a header with the Polycom logo and the text "VVX 500". Below the header, there is a navigation bar with the following links: Home, Simple Setup, Preferences, Settings, Diagnostics, and Utilities. Below the navigation bar, there is a section titled "You are here: Home". On the left side, there is a large image of a Polycom VVX 500 phone. Below the image, there is a section titled "VIEWS" with two links: "Home" (selected) and "Simple Setup". On the right side, there is a section titled "Home" with a table of phone information.

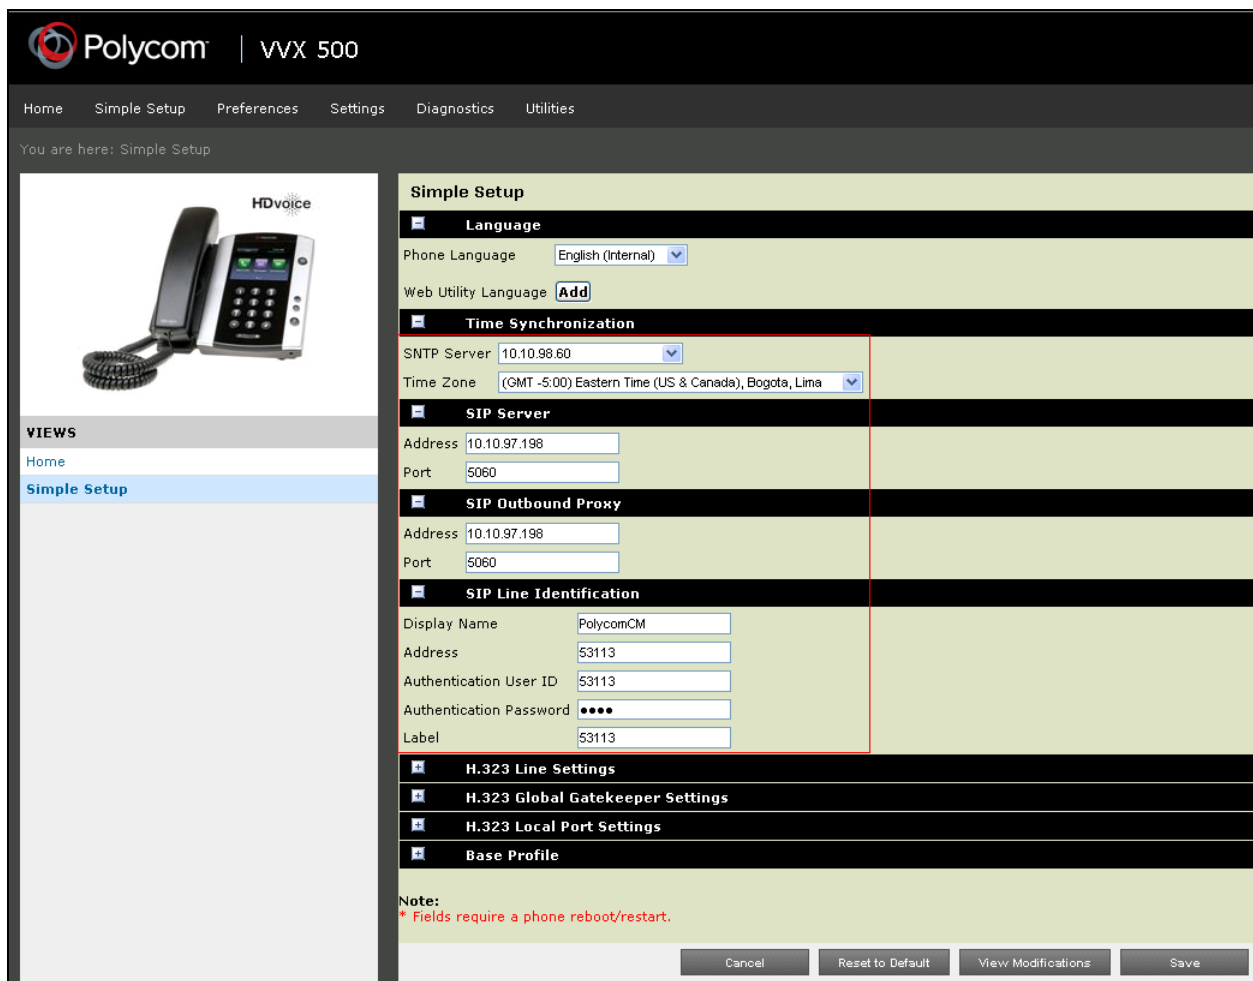

Phone Information	
Phone Model	VVX 500
Part Number	3111-44500-001 Rev:A
MAC Address	00:04:F2:82:ED:DE

From the physical phone display of VVX 500/600 navigate to **Menu → Settings → Status → Lines** (not shown). Verify that the Lines information shows the successful registration of the VVX 500/600 phone to the Session Manager.

Place a call from and to the VVX 500/600 and verify that the call is established with 2-way speech path. Verify basic telephony features by establishing calls between VVX 500/600 and phones on Communication Manager.

## 9. Conclusion

These Application Notes illustrate the procedures necessary for configuring the Polycom VVX 500/600 to interoperate with Avaya Aura® Communication Manager and Avaya Aura® Session Manager. All feature functionality test cases described in **Section 2.1** were passed along with the observations noted in **Section 2.2**.
