

Configuring the AudioCodes Mediant 1000 Media Gateway and Avaya Meeting Exchange over TLS – Issue 1.0

Abstract

These Application Notes describe a compliance tested solution comprising the Avaya Meeting Exchange Enterprise S6200 Conferencing Server communicating directly with the AudioCodes Mediant 1000 Media Gateway over TLS . The AudioCodes Mediant 1000 is utilized to enable connectivity between the Avaya Meeting Exchange Enterprise S6200 Conferencing Server 5.2 SP1 and the PSTN . This configuration provides a rich set of conferencing options available on the Avaya Meeting Exchange Enterprise S6200 Conferencing Server to participants associated with the PSTN.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1 Introduction

These Application Notes describe a compliance tested solution comprised of the Avaya Meeting Exchange Enterprise S6200 Conferencing Server and the AudioCodes Mediant 1000 over TLS. The AudioCodes Mediant 1000 is utilized to enable connectivity between Avaya Meeting Exchange Enterprise S6200 Conferencing Server and the PSTN.

1.1 Interoperability Compliance Testing

The Avaya Meeting Exchange Enterprise S6200 Conferencing Server is SIP-based with call signalling and Media Server capability for voice conferencing. Avaya's Conferencing Applications include reservation-less, attended, event and mobile to support various IP network implementations. The following capabilities are supported by Avaya Meeting Exchange Enterprise S6200 Conferencing Server:

- RFC 2833 DTMF
- In-band DTMF
- Up to 3200-user and 140-operator conferences
- Up to four digitally recorded music sources
- Codecs G.711 PCMU, G.711 PCMA

The AudioCodes Mediant 1000 system is a SIP based Voice-over-IP (VoIP) media gateway, offering integrated voice gateway functionality over IP networks. This solution addresses mid-density applications deployed in IP networks by simultaneous Voice over IP calls. The AudioCodes Mediant 1000 routes calls over the IP network using SIP signalling protocol, enabling the deployment of Voice over Packet solutions to PSTN.

2 Reference Configuration

The end to end signalling connectivity between Avaya Meeting Exchange Enterprise S6200 Conferencing Server and the PSTN is shown in **Figure 1**.

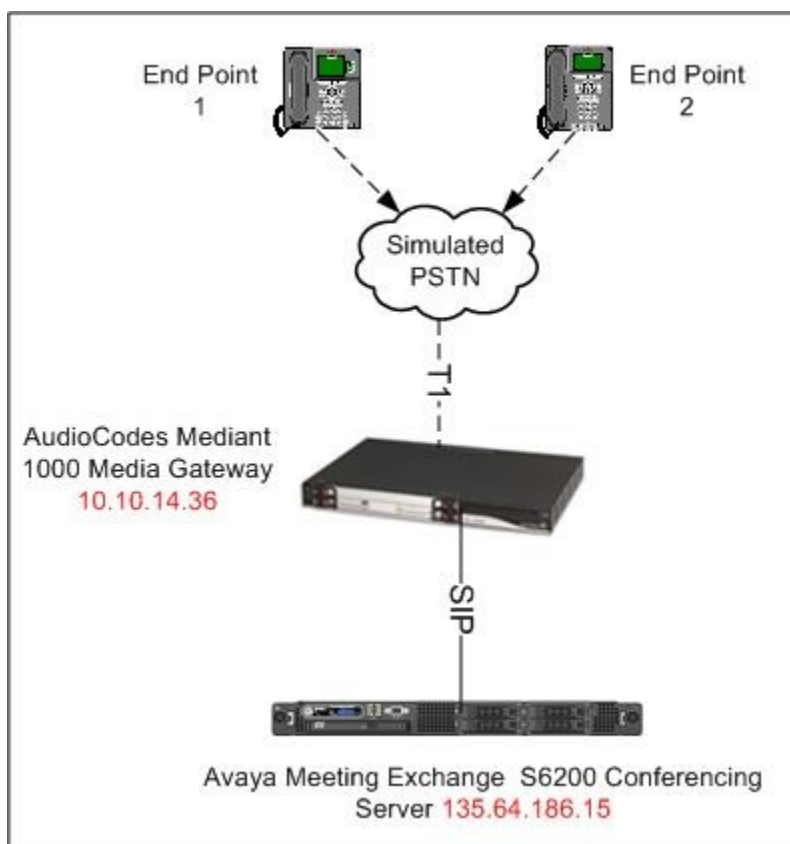

Figure 1: Network Configuration

3 Equipment and Software Validated

The following equipment and software versions were used for the sample configuration provided in these Application Notes.

Equipment	Software
Avaya Meeting Exchange Enterprise S6200 Conferencing 8510 Server	MX-5.2.1.0.4 mx-bridge-patch-5.2.1.3.1-1
Avaya Bridge Talk (BT)	5.2.0.0.4
Audio Codes Mediant 1000 Media Gateway	5.80A.033

Table 1: Hardware and Software Versions

4 Configure Avaya Meeting Exchange

The following sections describe the administrative procedures for configuring the Meeting Exchange

- **Basic configuration**
- **Enable dial out**
- **Provision DDI/DNIS for dialing into conferences**
- **Bridge Talk**

4.1 Basic Configuration

Log in to the Avaya Meeting Exchange console (PuTTY) using ssh to access the Command Line Interface (CLI) with the appropriate credentials. Configure settings that enable SIP connectivity between the Avaya Meeting Exchange and other devices by editing the **system.cfg** file as follows:

- Edit **/usr/ipcb/config/system.cfg**
- Add Meeting Exchange S6200 IP address
 - **IPAddress=("135.64.186.15")**
- Add a line to populate the From Header Field in SIP INVITE messages for Avaya Meeting Exchange in this sample configuration the values used.
 - **MyListener=<sip:6000@135.64.186.15;5061;transport=tls>**

***Note:** The user field 6000 was set as default digit string, used as the CLI for dials out originating from Avaya Meeting Exchange, this number should be aligned with dial plan. It is selected to match the user field provisioned for the **respContact** entry (see below).*

- Add a line to provide SIP Device Contact address to use for acknowledging SIP messages from the Avaya Meeting Exchange:
 - **respContact=<sip:6000@134.64.186.15;5061;transport=tls>**

- Add the following lines to set the Min-SE timer to **900** seconds in SIP INVITE messages from the Avaya Meeting Exchange :
 - **sessionRefreshTimerValue= 900**
 - **minSETimerValue= 900**

4.2 Enable Dial Out

To enable Dial-Out from the Avaya Meeting Exchange to the **Mediant 1000**, edit the **telnumToUri.tab** file as follows:

- Edit `/usr/ipcb/config/telnumToUri.tab` file with a text editor. Add a line to the file to route outbound calls from the Avaya Meeting Exchange to the **Mediant 1000**.
“\$1” substitutes the first wild card.

* **sip:\$1@10.10.14.36:5061;transport=tls Mediant 1000**

4.3 Provision DDI/DNIS for Dialling into Conferences

The following steps provide examples of how to provision Scan Flow (Scheduled and Demand) conference call functions by utilizing the **cbutil** utility on the Avaya Meeting Exchange. To map DNIS entries, run the **cbutil** utility on Avaya Meeting Exchange as follows:

- If not already logged on, log in to the Avaya Meeting Exchange with a ssh connection using PuTTY with the appropriate credentials.

Enable Dial-In access (via passcode) to conferences provisioned on the Avaya Meeting Exchange as follows:

- Add a DNIS entry for a **scan call function** corresponding to DID **1001** by entering the following command at the command prompt:

```
cbutil add <dnis> <rg> <msg> <ps> <ucps> <func> [-l <ln> -c <cn>],
```

where the variables for add command is defined as follows:

- o **<dnis>** DNIS
- o **<rg>** Reservation Group
- o **<msg>** Annunciator message number
- o **<ps>** Prompt Set number (0-20)
- o **<ucps>** Use Conference Prompt Set (y/n)
- o **<func>** One of: DIRECT/SCAN/ENTER/HANGUP/AUTOVL/FLEX
- o **-l <"ln">** Optional line name to associate with caller
- o **-c <"cn">** Optional company name to associate with caller

In this sample configuration:

```
S6200App->cbutil add 1001 0 247 1 n SCAN -l Mediant 1000
cbutil
Copyright 2004 Avaya, Inc. All rights reserved.
```

At the command prompt, enter **cbutil list** to verify the DNIS entries provisioned.

```
[sroot@MX config]# cbutil list
```

```
cbutil
```

```
Copyright 2004 Avaya, Inc. All rights reserved.
```

DNIS	Grp	Msg	PS	CP	Function	On	Failure	Line	Name
Company Name		Room	Start	Room	End				
1001	0	247	1	N	SCAN	ENTER	SCAN		
3331	0	301	1	N	DIRECT	ENTER	DIRECT		

4.4 Bridge Talk

The following steps utilize the Avaya Bridge Talk application to provision a sample conference on the Avaya Meeting Exchange. This sample conference enables both Dial-In and Dial-Out access to audio conferencing for endpoints on the PSTN.

- **Logging into Bridge Talk**
- **Provision a dial out**
- **Provision a Conference with Auto Blast Enabled**

Note: If any of the features displayed in the Avaya Bridge Talk screen captures are not present, contact an authorized Avaya sales representative to make the appropriate changes.

4.4.1 Logging into Bridge Talk

Invoke the Avaya Bridge Talk application as follows:

- Double-click on the desktop icon from a Personal Computer loaded with the Avaya Bridge Talk application and with network connectivity to the Avaya Meeting Exchange [Not shown].
- Enter the appropriate credentials in the **Sign-In** and **Password** fields.
- Enter the IP address of the Avaya Meeting Exchange (**135.64.186.15** for this sample configuration) in the **Bridge** field.

A screenshot of the 'Avaya Bridge Talk login' dialog box. The dialog has a blue title bar with the text 'Avaya Bridge Talk login' and a red close button. The main area is light yellow and contains four input fields: 'Sign-In:' (text box), 'Password:' (text box), 'Bridge:' (text box with a dropdown arrow), and 'Operator:' (text box with a dropdown arrow showing 'Next available'). At the bottom are two buttons: 'OK' and 'Exit'.

4.4.2 Provision a Dial-Out

Provision a dial list that is utilized for Dial-Out (e.g., Blast dial and Fast dial) from the Avaya Meeting Exchange. From the Avaya Bridge Talk Menu Bar, click **Fast Dial**→**New**.

From the **Dial List Editor** window that is displayed:

- Enter a descriptive label in the **Name** field.
- Enable conference participants on the dial list to enter the conference without a passcode by checking the **Directly to Conf** box as displayed.
- Add entries to the dial list by clicking on the **Add** button and enter **Name**, **Company** and **Telephone** number for dial out for each participant. [Optional] *Moderator privileges may be granted to a conference participant by checking the **Moderator** box.*
- When finished, click on the **Save** button on the bottom of the screen.

Dial List Editor

Name: Optional Access Code: ☒ Directly to Conf

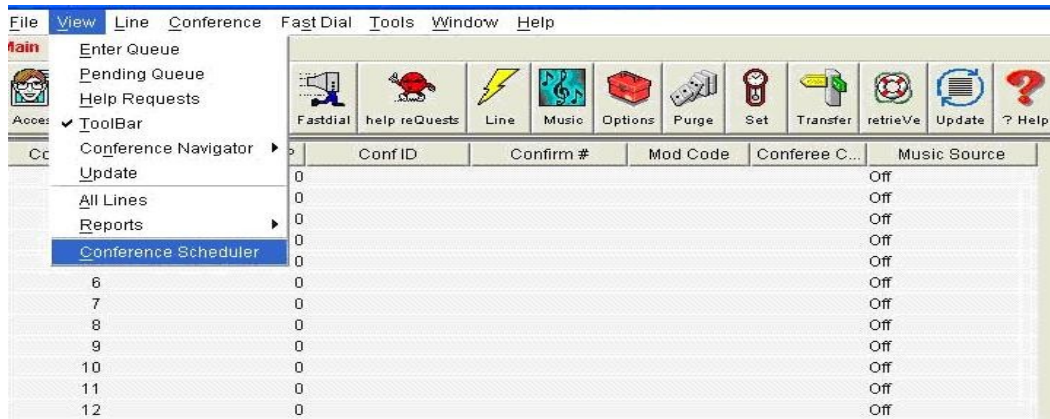

Conferee List

☒ Display As Entered

Name	Company	Moderator	Q&A Priority	Telephone
Test1		<input type="checkbox"/>		6666

4.4.3 Provision a Conference with Auto Blast Enabled

To provision a conference with Auto Blast enabled go to the Avaya Bridge Talk Menu Bar, click **View →Conference Scheduler**.

From the **Conference Scheduler** window, click **File →Schedule Conference**.

Provision a Scan Flow conference on Avaya Meeting Exchange, From the **Schedule Conference** window that is displayed, provision a conference as follows:

- Enter a unique **Conferee Code** to allow participants access to this conference.
- Enter a unique **Moderator Code** to allow participants access to this conference with moderator privileges. Enable moderator access with a passcode for this conference call by configuring the following:
Note: This conference remains open for participants to enter as either moderator or participant by entering the appropriate code when prompted.
- Enter a descriptive label in the **Conference Name** field.
- Administer settings to enable an Auto Blast dial by setting **Auto Blast** to **Auto/Manual** depending on this test.
- Select a dial list by clicking on the **Dial List** button, select a dial list from the **Create, Select or Edit Dial List** window that is displayed, and click on the **Select** button (To verify Dial out and Blast Dial out) [Not Shown].
- When finished, click on the **Save** button on the bottom of the screen.

5 Configure AudioCodes Mediant 1000 Media Gateway

The following sections describe the steps for configuring the SIP trunks and call routing for the AudioCodes Mediant 1000. This configuration will enable the AudioCodes Mediant 1000 to interoperate with both the Avaya Meeting Exchange Enterprise and the PSTN. Configuration is performed using the embedded web server, which supports gateway configuration, including loading of configuration files. The Embedded Web Server can be accessed from a standard web browser. Specifically, users can employ this facility to set up the gateway configuration parameters. Users also have the option to remotely reset the gateway and to permanently apply the new set of parameters.

5.1 Access To Home Page

From an Internet browser, navigate to **http://<ip-addr>**, where the <ip-addr> is the IP address of the AudioCodes Mediant 1000. The page below shows the **AudioCodes Mediant 1000 Home Page**. Log in to the AudioCodes Mediant 1000 with the appropriate credentials.

Note: When configuring any parameters using the Web Browser click the **Submit** icon and the **Burn** icon to save the configuration to flash memory. These icons are found on the top of the browser page. To reset the AudioCodes Mediant 1000 click on the **Device Actions** drop down window and click **Reset** as shown below.

General Information	
IP Address	10.10.14.36
Subnet Mask	255.255.255.0
Default Gateway	10.10.14.1
Digital Port Number	1
BRI Port Number	0

Trunk (Digital Modules)	Channel (Analog Modules)
Disable	Not Connected
Active - OK	Inactive
RAI Alarm	Handset Offhook
LOS / LOF Alarm	Call Connected
AIS Alarm	

5.2 Configuring PSTN Settings

On the left pane click **Configuration** and navigate to **PSTN Settings** → **Trunk Settings**

Note: Click the **Stop Trunk** button to modify the selected trunk number 1 (not shown).

In the **General Settings** section of **Trunk Settings** configure as follows:

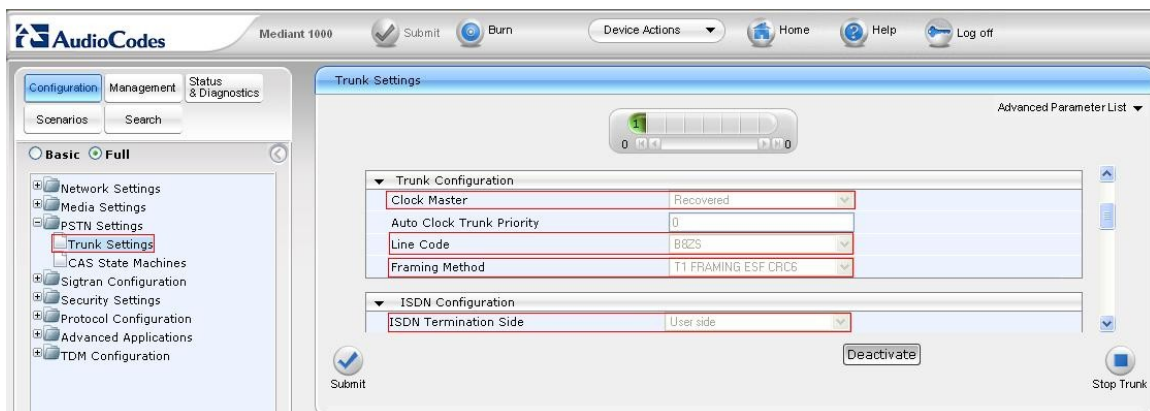

- Select **T1 5ESS 10 ISDN** in the **Protocol Type** field as shown below to enable connectivity to the PSTN according to requirements defined by the PSTN service provider.

5.3 Configuring Trunk Configuration

Scroll down to the **Trunk Configuration** section and configure as follows:

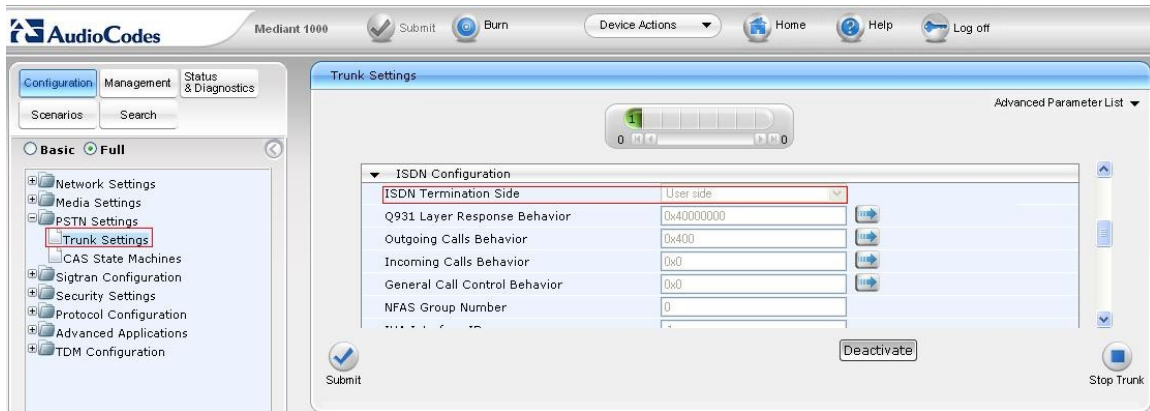

- Select **Recovered** in the **Clock Master** field as the clock is recovered from the PSTN line.
- Select **B8ZS** for **Line Code** as this is used for T1 trunks
- The **Framing Method** for T1 trunks is always Framing **T1 FRAMING ESF CRC6**.

5.4 Configuring ISDN Configuration

Scroll down to the **ISDN Configuration** section and configure as follows:

- Configure **ISDN Termination Side** to **User side** as the PSTN is configured as Network and the Mediant 1000 is the slave device.

Scroll down to the remainder of the **ISDN Configuration** section and the remaining fields are default settings.

5.5 Configuring TDM Bus Settings

On the left pane click **Configuration** and navigate to **TDM Configuration** → **TDM Bus Settings**.

- Configure **PCM Law Select** to **A-Law** as T1 trunks are configured to this value.
- Configure the **TDM Bus PSTN Auto Clock** to **Disable**.
- Configure **TDM Bus Clock Source** to **Network** as the clocking is generated from the PSTN line.

5.6 Proxy & Registration

On the left pane click **Configuration** and navigate to **Protocol Configuration** → **Protocol Definition** → **Proxy & Registration**.

- Configure **Use Default Proxy** to **No** as SIP connectivity between the AudioCodes Mediant 1000 and the Meeting Exchange server is direct.

5.7 Routing Calls

To administer call routing to calls originating from the PSTN to the Meeting Exchange using TLS , on the left pane click **Configurations** and navigate to **Protocol Configuration → Routing Tables → Tel to IP Routing**.

- Enter a rule in the **Dest Phone Prefix** field that matches the pattern of incoming calls to the AudioCodes Mediant 1000 from the PSTN. For these Application Notes, the rule * is utilized, where * is a wildcard and will match any digit(s), thus routing all calls to the Meeting Exchange from the PSTN.
- Enter an * in the **Source Phone Prefix** field to allow routine for any source telephone number Dialing-In to the Meeting Exchange from the PSTN.
- Configure table as shown below where the **Dest IP Address** is that of the Meeting Exchange.
- Configure **Transport Type** depending on which SIP transport type is under test.

The screenshot shows the AudioCodes Mediant 1000 configuration interface. The left pane shows the navigation tree with 'Tel to IP Routing' selected under 'Routing Tables'. The main pane displays the 'Outbound IP Routing Table' configuration. The table has columns for Src. Trunk Group ID, Dest. Phone Prefix, Source Phone Prefix, Dest. IP Address, Port, Transport Type, and Dest. IP Group ID. The first row is configured with '*' for both phone prefixes, '135.64.186.15' for the destination IP, and 'TLS' for the transport type. The 'Routing Index' is set to '1-10' and the 'Tel To IP Routing Mode' is set to 'Route calls before manipulation'.

Src. Trunk Group ID	Dest. Phone Prefix	Source Phone Prefix	Dest. IP Address	Port	Transport Type	Dest. IP Group ID
1	*	*	135.64.186.15		TLS	1
2					Not Configured	
3					Not Configured	

5.8 Administer Codec Preferences

To administer codec preferences, on the left pane click **Configuration** and navigate to **Protocol Configuration → Protocol Definition → Coders**.

- Configure a **Coder Name** that is compatible with Avaya Meeting Exchange Enterprise S6200 Conferencing Server.
- Remaining fields are default settings.

Note: The first coder is the highest priority coder and is used by the AudioCodes Mediant 1000 whenever possible. If the Avaya Meeting Exchange cannot use the coder assigned as the first coder, the gateway attempts to use the next coder and so forth.

The screenshot shows the AudioCodes Mediant 2000 web interface. On the left, the 'Configuration' menu is expanded to 'Protocol Definition' and then 'Coders'. The main area displays the 'Coders Table' with the following data:

Coder Name	Packetization Time	Rate	Payload Type	Silence Suppression
G.711A-law	20	64	8	Disabled
G.711U-law	20	64	0	Disabled

5.9 Configuring SIP General Parameters for TLS

On the left pane click **Configuration** and navigate to **Protocol Configuration → Protocol Definition → SIP General Parameters**.

- Configure **SIP Transport Type** to **TLS**.
- Configure **SIP TLS Local Port** to **5061**, to enable SIP/TLS connectivity with the Meeting Exchange server, (see **Section 4.1** on configuring Meeting Exchange)
- Configure the **SIP Destination Port** to port **5061**.

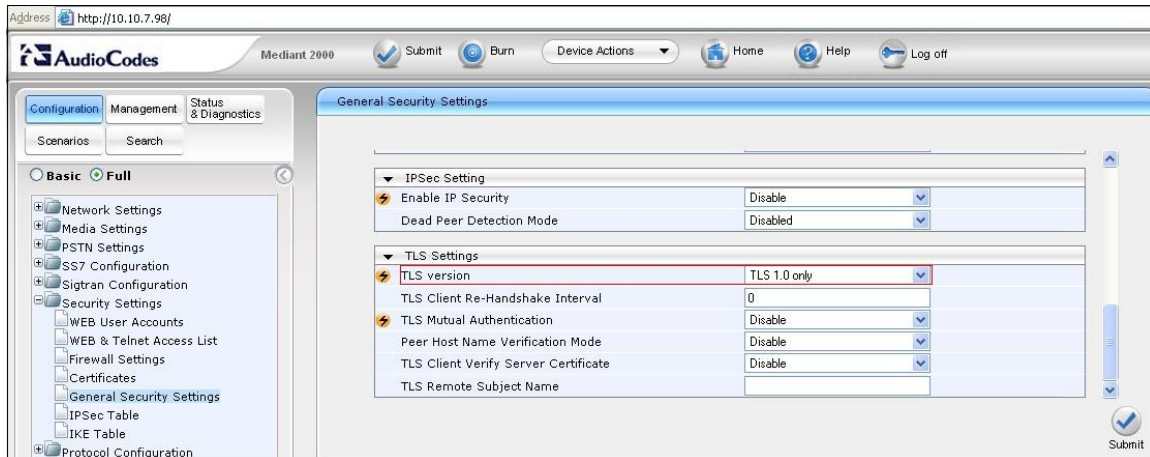

The screenshot shows the AudioCodes Mediant 2000 web interface. On the left, the 'Configuration' menu is expanded to 'Protocol Definition' and then 'SIP General Parameters'. The main area displays the 'SIP General Parameters' configuration table:

Parameter	Value
SIP Transport Type	TLS
SIP UDP Local Port	5060
SIP TCP Local Port	5060
SIP TLS Local Port	5061
Enable SIPs	Enable
Enable TCP Connection Reuse	Enable
TCP Timeout	0
SIP Destination Port	5061
Use user=phone in SIP URL	Yes
Use user=phone in From Header	No
Use Tel URI for Asserted Identity	Disable

5.10 Configuring General Security Settings

On the left pane click **Configuration** and navigate to **Security Settings → General Security Settings**.

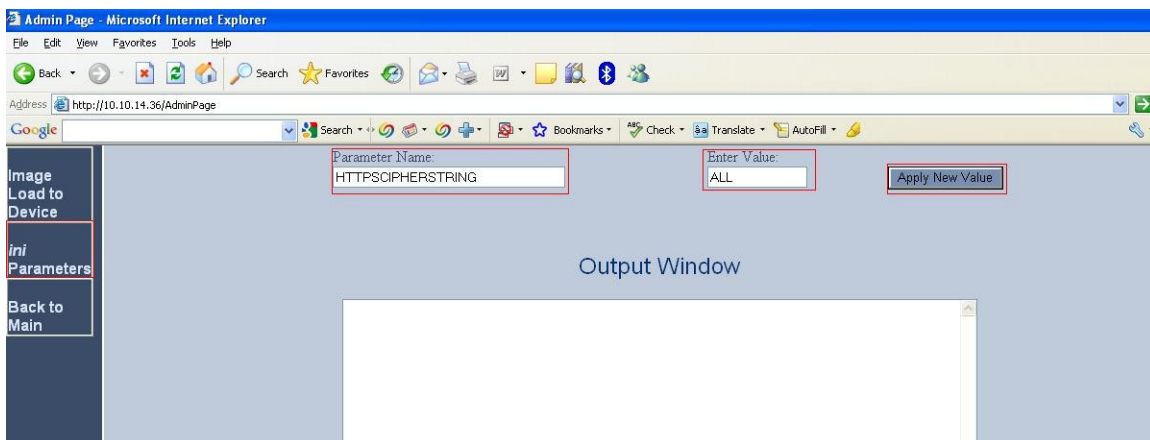

- Configure **TLS version** to **TLS 1.0 only** as shown below, as Avaya Meeting Exchange Enterprise S6200 Conferencing Server only supports TLS 1.0.

5.11 Enabling Cipher String

To enable Cipher Strings on the AudioCodes Mediant 1000 use the **AdminPage**. From an Internet browser, navigate to **http://<ip-addr>/AdminPage**, where the <ip-addr> is the IP address of the Mediant 1000. The screen below shows the AudioCodes **Mediant 1000 Admin Page**.

- Configure the **Parameter Name** to **HTTPSCIPHERSTRING** and **Enter Value** to **ALL**.
- Click **Apply New Value** to save changes to the ini file.
- Click **Back to Main** to the AudioCodes Mediant Home Page.

5.12 Installing and Configuring Avaya Signed TLS Certificates

Installing and configuring TLS certificates on the AudioCodes Mediant 1000 Media Gateway enables it communicate with Avaya Meeting Exchange Enterprise S6200 Conferencing Server using TLS.

5.13 Decrypting Keys for TLS

By default the TLS keys that are installed on the Avaya Meeting Exchange Enterprise S6200 Conferencing Server are encrypted. There is one key file (**CliKey1.pem**) that is required to be decrypted and uploaded to the AudioCodes Mediant 1000 in order for TLS to work. A cert file (**CliCert1.pem**) is also required to be uploaded to the AudioCodes Mediant 1000 in order for TLS to work. Both of these files are located on the Avaya Meeting Exchange Enterprise S6200 Conferencing Server at:
/usr/local/ssl/certs/

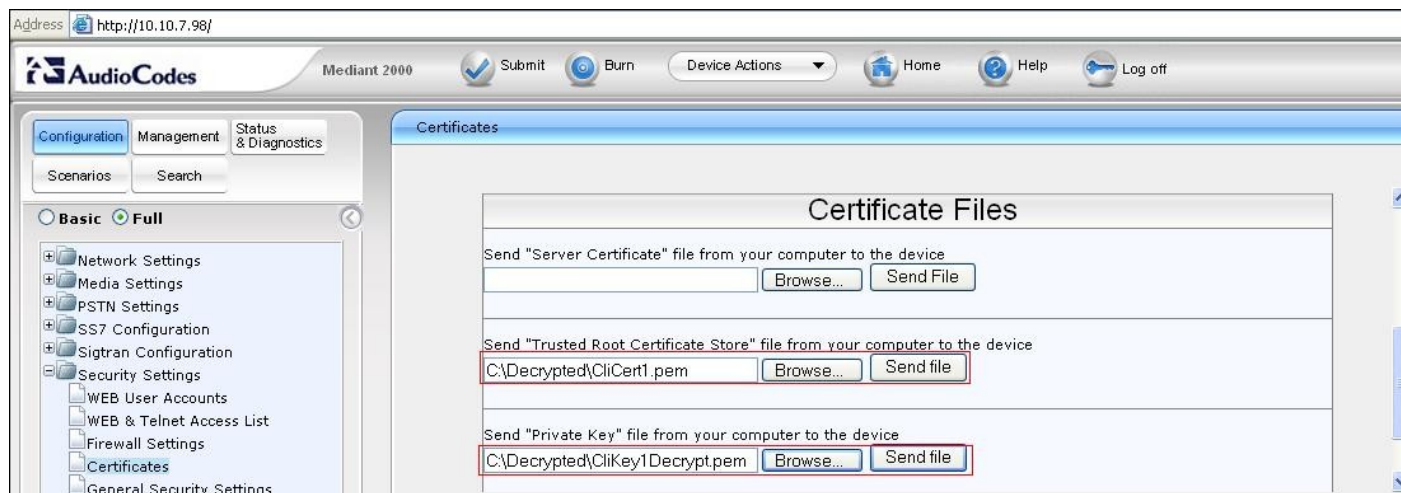

Using OpenSSL command on Avaya Meeting Exchange, decrypt **CliKey1.pem** using the following command:

```
openssl  
openssl> rsa -in CliKey1.pem -out decrypted_CliKey1.pem
```

Note: When requested for a passphrase for CliKey1.pem, use the passphrase **CliKey1**

5.14 Installing Certificate and Key Files

On the left pane click **Configuration** and navigate to **Security Settings → Certificates**. Using the decrypted certificates (see **Section 4.1**) **Browse** the certificates and click **Send File** to install.

5.15 Configure In Band Settings

On the left pane click **Configuration** and navigate to **Protocol Configuration** → **Protocol Definition** → **DTMF & Dialing**. Configure **Declare RFC 2833 in SDP** to **No**.

The screenshot shows the AudioCodes Mediant 2000 web interface. The left navigation pane is expanded to 'DTMF & Dialing'. The main content area displays a table of parameters for DTMF & Dialing configuration. The 'Declare RFC 2833 in SDP' parameter is highlighted with a red box and set to 'No'.

Basic Parameter List	
Max Digits In Phone Num	5
Inter Digit Timeout for Overlap Dialing [sec]	4
Declare RFC 2833 in SDP	No
1st Tx DTMF Option	RFC 2833
2nd Tx DTMF Option	
RFC 2833 Payload Type	96
Digit Mapping Rules	
Default Destination Number	1000
Special Digit Representation	Special

5.16 Configure Out of Band Settings

On the left pane click **Configuration** and navigate to **Protocol Configuration** → **Protocol Definition** → **DTMF & Dialing**. Configure **Declare RFC 2833 in SDP** to **Yes** and **1st Tx DTMF Option** to **RFC 2833**.

The screenshot shows the AudioCodes Mediant 2000 web interface. The left navigation pane is expanded to 'DTMF & Dialing'. The main content area displays a table of parameters for DTMF & Dialing configuration. The 'Declare RFC 2833 in SDP' parameter is highlighted with a red box and set to 'Yes', and the '1st Tx DTMF Option' parameter is also highlighted with a red box and set to 'RFC 2833'.

Basic Parameter List	
Max Digits In Phone Num	5
Inter Digit Timeout for Overlap Dialing [sec]	4
Declare RFC 2833 in SDP	Yes
1st Tx DTMF Option	RFC 2833
2nd Tx DTMF Option	
RFC 2833 Payload Type	96
Digit Mapping Rules	
Default Destination Number	1000
Special Digit Representation	Special

6 General Test Approach and Test Results

The general test approach was to place calls between the Meeting Exchange and the PSTN directly via the AudioCodes Mediant 1000. The main objectives were to verify the following using the following protocols TLS.

Dial-In Conferencing

- DNIS direct call function, where conference participants enter a conference as moderator, without entering a participant-access-code (passcode).
- Scan all function, where conference participants enter a conference with a valid passcode.

Dial-Out Conferencing

- Blast Dial, auto and manual.
- Originator Dial-Out, where a conference participant is already in a conference as moderator and invokes a Dial-Out to a single participant by entering *1.
- Operator Fast Dial, where an operator can Dial-Out to a pre-provisioned dial list of one or more participant.

Audio Path

- Operator Dial-Out to establish an Audio Path.
- Operator Dial-In to establish an Audio Path.

DTMF/Touchtone commands

- *0 Request Help
- *2 (as moderator) to start/stop conference recording
- *3 to start/stop playback of conference recording
- *5 (as moderator) toggle lecture on/off
- *6 toggle mute on/off
- *7 (as moderator) toggle conference security on/off
- *8 play the roster of participant name during conference
- *93X (where X is defined from 1 to 9) to invoke a subconference
- *930 entered from a subconference to go back to the main conference
- *93# entered from a subconference (as moderator) to bring all conference participants back to the main conference
- ## (as moderator) to end the conference

7 Verification Steps

The following steps were used to verify the administrative steps presented in these Application Notes and are applicable for similar configurations in the field. The verification steps in this section validated the following:

- The Meeting Exchange server configuration.
- Verify that the trunks are up on the AudioCodes Mediant 1000 by verifying the icons for those entries on the Trunk & Channel Status screen are green.
- Verify successful inbound and outbound calls between the Meeting Exchange and the PSTN.

7.1 Avaya Meeting Exchange Processes

Verify all conferencing related processes are running on the Meeting Exchange server as follows:

- Log in to the Meeting Exchange server console to access the CLI with the appropriate credentials.
- `cd to /usr/dcb/bin.`
- At the command prompt, run the script **dcbps** and confirm all processes are running by verifying an associated Process ID (PID) for each process.

7.2 Verify Call Routing

Verify end to end signalling/media connectivity between the Meeting Exchange and the PSTN directly via the AudioCodes Mediant 1000. This is accomplished by placing calls to and from the Meeting Exchange. This step utilizes the Avaya Bridge Talk application to verify calls to and from the Meeting Exchange are managed correctly, e.g., callers are added/removed from conferences. This step will also verify the conferencing applications provisioned

- From an endpoint on the Public Switch Telephone Network, Dial **29000** to enter a conference as **Moderator** (with passcode) while simultaneously invoking the associated Auto Blast dial feature for this conference
- If not already logged on, log in to the Avaya Bridge Talk application with the appropriate credentials
- **Double-Click on the highlighted Conf #** to open a **Conference Room** window. Verify conference participants are added/removed from conferences by observing the Conference Navigator and/or Conference Room windows.

8 Conclusion

These Application Notes presented a compliance-tested solution comprised of the Avaya Meeting Exchange Enterprise S6200 Conferencing Server and the AudioCodes Mediant 1000. This solution enables connectivity between the Avaya Meeting Exchange Enterprise S6200 Conferencing Server directly with AudioCodes Mediant 1000 over TLS.
