

Avaya Solution & Interoperability Test Lab

Application Notes for Polycom SoundPoint® IP 650 SIP Phone with Avaya Aura™ Session Manager 6.0 and Avaya Aura™ Communication Manager 6.0 - Issue 1.0

Abstract

These Application Notes describe the steps required to integrate a Polycom SoundPoint® IP 650 SIP Phone with a SIP infrastructure consisting of Avaya Aura™ Session Manager and Avaya Aura™ Communication Manager configured as an Evolution Server. During compliance testing, the SoundPoint® IP 650 SIP Phone successfully registered with Session Manager, established calls with other telephones, and executed telephony features such as Hold, Transfer, and Conference.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the steps required to integrate a Polycom SoundPoint® IP 650 SIP Phone with a SIP infrastructure consisting of Avaya Aura™ Session Manager and Avaya Aura™ Communication Manager configured as an Evolution Server. During compliance testing, the SoundPoint® IP 650 SIP Phone successfully registered with Session Manager, established calls with other telephones, and executed telephony features such as Hold, Transfer, and Conference.

These Application Notes assume that Communication Manager and Session Manager are already installed and basic configuration steps have been performed. Only steps relevant to this compliance test will be described in this document. For further details on configuration steps not covered in this document, consult the appropriate document in the reference section at the end of this document.

1.1. Interoperability Compliance Testing

Interoperability compliance testing covered the following features and functionality:

- Successful registration of the SoundPoint IP 650 SIP Phone with Session Manager.
- Calls between SoundPoint IP 650 SIP phones and Avaya SIP, H.323, and digital stations.
- G.711, G.729A, and G.722 codec support.
- Direct IP-IP Media (i.e, shuffling).
- Caller ID on telephone display.
- Proper recognition of DTMF tones by navigating voicemail menus.
- Proper operation of voicemail with Message Waiting Indication (MWI).
- Basic telephony features including Hold, Transfer, and Conference.
- Extended telephony features using Communication Manager Feature Name Extensions (FNEs) such as Call Forwarding, Call Pickup, and Send All Calls.
- Proper system recovery after a SoundPoint IP 650 SIP phone restart and loss of IP connectivity.
- PC/laptop connectivity to Ethernet jack on phone.

1.2. Support

For technical support on the SoundPoint IP 650 SIP Phone contact Polycom Support through their website at <http://www.polycom.com/support/>.

In addition, additional support information may be obtained through the knowledge base available at

http://www.polycom.com/support/voice/soundpoint_ip/VoIP_Technical_Bulletins_pub.html.

2. Reference Configuration

Figure 1 illustrates a sample configuration with an Avaya SIP-based network that includes the following Avaya products:

- Avaya Aura™ Communication Manager running on an Avaya S8800 Server with a G650 Media Gateway. Communication Manager was configured as an Evolution Server.
- Avaya Aura™ Session Manager connected to Communication Manager via a SIP trunk and acting as a Registrar/Proxy for SIP telephones.
- Avaya Aura™ System Manager used to configure Session Manager.
- Avaya Modular Messaging providing voice mail service for the SIP endpoints.

In addition, two Polycom SoundPoint IP 650 SIP Phones registered with Session Manager and were configured as Off-PBX Stations (OPS) on Communication Manager.

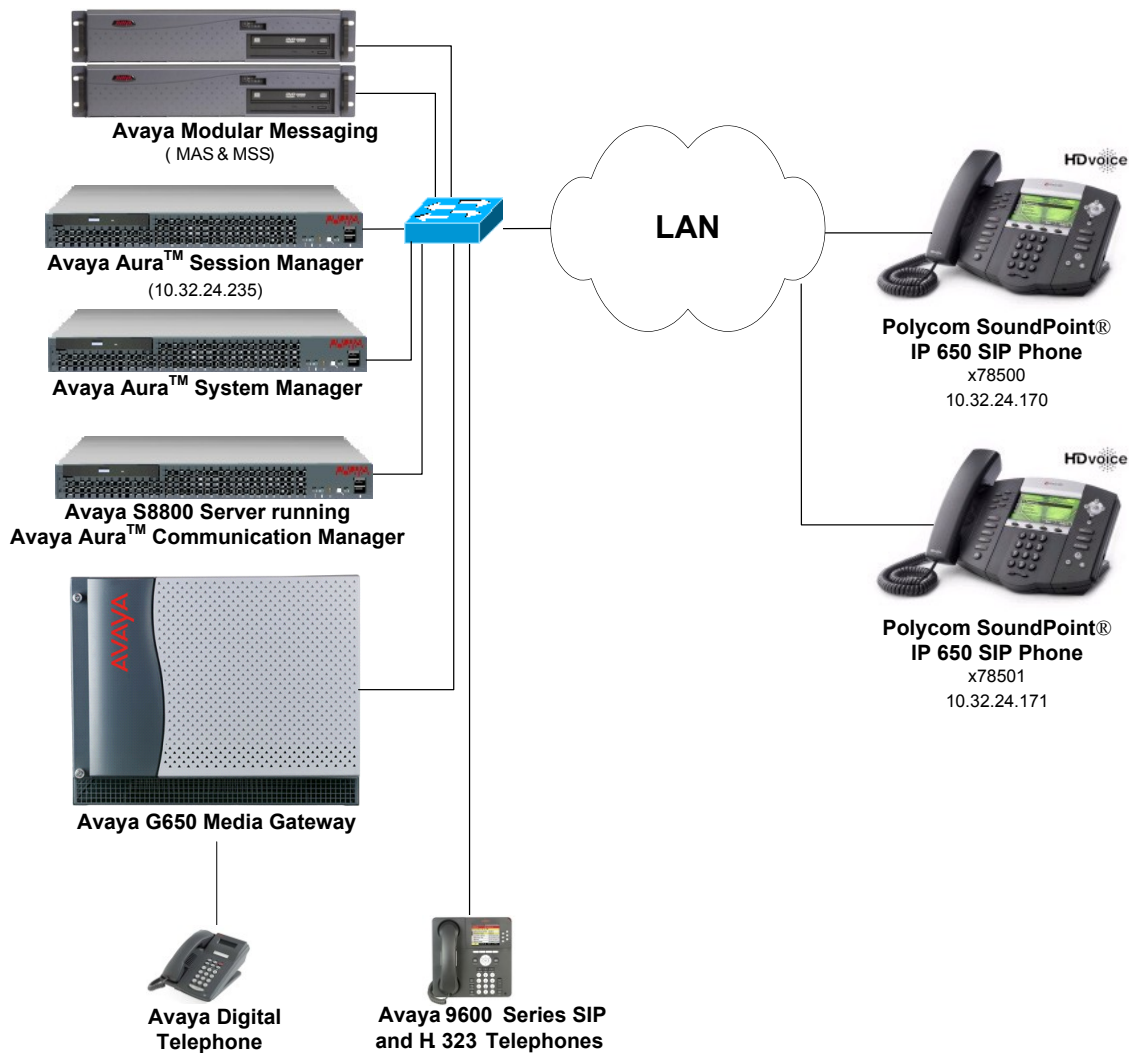

Figure 1: Avaya SIP Network with Polycom SoundPoint IP 650 SIP Phones

2.1. SIP Call Flows

The Polycom SoundPoint IP 650 SIP Phone originates a call by sending a call request (SIP INVITE message) to Session Manager, which then routes the call over a SIP trunk to the Communication Manager for origination services. If the call is destined for another local SIP phone, Communication Manager routes the call back over the SIP trunk to Session Manager for delivery to the destination SIP phone. If the call is destined for an H.323 or digital telephone, Communication Manager routes the call to the H.323 or digital endpoint.

For a call arriving at Communication Manager that is destined for one of the SoundPoint IP 650 SIP Phones, Communication Manager routes the call over the SIP trunk to Session Manager for delivery to the SoundPoint IP 650 SIP Phones.

3. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Hardware Component	Version
Avaya S8800 Servers and G650 Media Gateway	Avaya Aura™ Communication Manager 6.0 with Service Pack 1
Avaya Aura™ Session Manager	6.0 (6.0.0.0.600020)
Avaya Aura™ System Manager	6.0 (6.0.0.0.556-3.0.6.1)
Avaya Modular Messaging	5.2
Avaya 9600 Series IP Telephones	3.110b (H.323) 2.6 (SIP)
Avaya Digital Telephones	--
Polycom SoundPoint IP 650 SIP Phone	3.2.3.1734

4. Configure Avaya Aura™ Communication Manager

This section describes the steps for configuring the SoundPoint IP 650 SIP Phone as an Off-PBX Station (OPS) and configuring a SIP trunk between Communication Manager and Session Manager. **Section 4.3** covers the station configuration for the SoundPoint IP 650 SIP Phones. Use the System Access Terminal (SAT) to configure Communication Manager and log in with the appropriate credentials.

4.1. Verify OPS and SIP Trunk Capacity

Using the SAT, verify that the Off-PBX Telephones (OPS) and SIP Trunks features are enabled on the **Optional Features** form. The license file installed on the system controls these options. If a required feature is not enabled, contact an authorized Avaya sales representative. On **Page 1**, verify that the number of OPS stations allowed in the system is sufficient for the number of SIP endpoints that will be deployed.

```

	Maximum Number of Expanded Meet-me Conference Ports:	300	0
(NOTE: You must logoff & login to effect the permission changes.)			

4.2. Configure SIP Trunk

In the **IP Node Names** form, assign an IP address and host name for the S8800 Server processor, the C-LAN board in the G650 Media Gateway, and virtual SM-100 Security Module interface for Session Manager. The host names will be used throughout the other configuration screens of Communication Manager.

change node-names ip		Page	1 of	2
IP NODE NAMES				
Name	IP Address			
Gateway001	10.32.24.1			
ModMsg	192.50.10.45			
clancrm	10.32.24.20			
default	0.0.0.0			
devcon-asm	10.32.24.235			
medprocrm	10.32.24.21			
procr	10.32.24.10			
procr6	::			
(8 of 8 administered node-names were displayed)				
Use 'list node-names' command to see all the administered node-names				
Use 'change node-names ip xxx' to change a node-name 'xxx' or add a node-name				

In the **IP Network Region** form, the **Authoritative Domain** field is configured to match the domain name configured on Session Manager. In this configuration, the domain name is *avaya.com*. By default, **IP-IP Direct Audio** (shuffling) is enabled to allow audio traffic to be sent directly between IP endpoints without using media resources in the Avaya G650 Media Gateway. The **IP Network Region** form also specifies the **IP Codec Set** to be used for calls routed over the SIP trunk to Session Manager. This codec set is used when its corresponding network region (i.e., IP Network Region '1') is specified in the SIP signaling group.

```

change ip-network-region 1                                     Page 1 of 20

                                IP NETWORK REGION

Region: 1
Location: 1          Authoritative Domain: avaya.com
Name:
MEDIA PARAMETERS
    Codec Set: 1          Intra-region IP-IP Direct Audio: yes
                          Inter-region IP-IP Direct Audio: yes
                          IP Audio Hairpinning? y
    UDP Port Min: 2048
    UDP Port Max: 3029

    H.323 Link Bounce Recovery? y
    Idle Traffic Interval (sec): 20
    Keep-Alive Interval (sec): 5
    Keep-Alive Count: 5

```

In the **IP Codec Set** form, select the audio codec type supported for calls routed over the SIP trunk to the SoundPoint IP 650 SIP Phones. The form is accessed via the **change ip-codec-set 1** command. Note that IP codec set '1' was specified in IP Network Region '1' shown above. The default settings of the **IP Codec Set** form are shown below. However, the **IP Codec Set** form may specify multiple codecs, including G.711, G.729A, and G.722, which are supported by the SoundPoint IP 650 SIP Phones.

```

change ip-codec-set 1                                     Page 1 of 2

```

Prior to configuring a SIP trunk group for communication with Session Manager, a SIP signaling group must be configured. Configure the Signaling Group form as follows:

- Set the **Group Type** field to *sip*.
 - Set the **IMS Enabled** field to *n*.
 - The **Transport Method** field was set to *tcp*.
 - Specify the C-LAN board and the Session Manager as the two ends of the signaling group in the **Near-end Node Name** field and the **Far-end Node Name** field, respectively. These field values are taken from the **IP Node Names** form.
 - Ensure that the TCP port value of *5060* is configured in the **Near-end Listen Port** and the **Far-end Listen Port** fields.
 - The preferred codec for the call will be selected from the IP codec set assigned to the IP network region specified in the **Far-end Network Region** field.
 - Enter the domain name of Session Manager in the **Far-end Domain** field. In this configuration, the domain name is *avaya.com*.
 - The **Direct IP-IP Audio Connections** field was enabled on this form.
 - The **DTMF over IP** field should be set to the default value of *rtp-payload*.
- Communication Manager supports DTMF transmission using RFC 2833. The default values for the other fields may be used.

add signaling-group 50		Page 1 of 1
SIGNALING GROUP

Configure the **Trunk Group** form as shown below. This trunk group is used for calls to the SIP Phones. Set the **Group Type** field to *sip*, set the **Service Type** field to *tie*, specify the signaling group associated with this trunk group in the **Signaling Group** field, and specify the **Number of Members** supported by this SIP trunk group. Configure the other fields in bold and accept the default values for the remaining fields.

add trunk-group 50		Page 1 of 21

4.3. Configure Stations

Use the **add station** command to add a station for each SoundPoint IP 650 SIP Phone to be supported. Use *9630SIP* for the **Station Type** and include the **Coverage Path** for voice mail, if applicable. The **Name** field is optional. Use the default values for the other fields on **Page 1**. The SIP station can also be configured automatically by System Manager as described in **Section 5.7**.

Use the **change off-pbx-telephone station-mapping** command to map the Communication Manager extensions (e.g., 78500) to the same extension configured in System Manager. Enter the field values shown. For the sample configuration, the **Trunk Selection** field is set to *aar* so that AAR call routing is used to route calls to Session Manager. AAR call routing configuration is not shown in these Application Notes. The **Configuration Set** value can reference a set that has the default settings.

5. Configure Avaya Aura™ Session Manager

This section provides the procedures for configuring Session Manager. The procedures include adding the following items:

- SIP domain
- Logical/physical Locations that can be occupied by SIP Entities
- SIP Entities corresponding to Session Manager and Communication Manager
- Entity Links, which define the SIP trunk parameters used by Session Manager when routing calls to/from SIP Entities
- Application Sequence
- Define Communication Manager as Administrable Entity (i.e., Managed Element)
- Session Manager, corresponding to the Avaya Aura™ Session Manager Server to be managed by Avaya Aura™ System Manager
- Add SIP Users

Configuration is accomplished by accessing the browser-based GUI of Avaya Aura™ System Manager using the URL “https://<ip-address>/SMGR”, where <ip-address> is the IP address of Avaya Aura™ System Manager. Log in with the appropriate credentials.

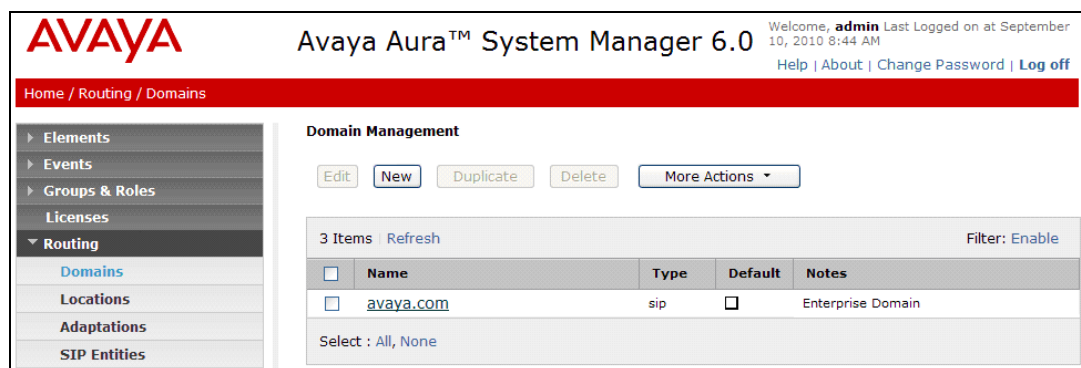

5.1. Specify SIP Domain

Add the SIP domain for which the communications infrastructure will be authoritative. Do this by selecting **Domains** on the left and clicking the **New** button on the right. The following screen will then be shown. Fill in the following:

- **Name:** The authoritative domain name (e.g., *avaya.com*).
- **Notes:** Descriptive text (optional).

Click **Commit**.

Since the sample configuration does not deal with any other domains, no additional domains need to be added.

5.2. Add Locations

Locations can be used to identify logical and/or physical locations where SIP Entities reside for purposes of bandwidth management. To add a location, select **Locations** on the left and click on the **New** button (not shown) on the right. The following screen will then be shown. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **Notes:** Descriptive text (optional).

Under *Location Pattern*:

- **IP Address Pattern:** A pattern used to logically identify the location.
- **Notes:** Descriptive text (optional).

The screen below shows addition of the *BR-DevConnect* location, which includes the Avaya Aura™ Communication Manager and Avaya Aura™ Session Manager. Click **Commit** to save the Location definition.

5.3. Add SIP Entities

In the sample configuration, a SIP Entity is added for Session Manager and the C-LAN in the G650 Media Gateway.

5.3.1. Avaya Aura™ Session Manager

A SIP Entity must be added for Session Manager. To add a SIP Entity, select **SIP Entities** on the left and click on the **New** button (not shown) on the right. The following screen is displayed. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **FQDN or IP Address:** IP address of the signaling interface on Session Manager.
- **Type:** Select *Session Manager*.
- **Location:** Select one of the locations defined previously.
- **Time Zone:** Time zone for this location.

The screenshot displays the Avaya Aura System Manager 6.0 web interface. The top header includes the Avaya logo, the product name 'Avaya Aura™ System Manager 6.0', and a user status bar indicating 'Welcome, admin' and 'Last Logged on at September 10, 2010 8:44 AM'. A navigation menu on the left lists various system components, with 'Routing' expanded to show 'SIP Entities'. The main content area is titled 'SIP Entity Details' and contains a 'General' tab. The form fields are as follows:

- Name:** devcon-asm
- FQDN or IP Address:** 10.32.24.235
- Type:** Session Manager (dropdown menu)
- Notes:** (empty text field)
- Location:** BR-DevConnect (dropdown menu)
- Outbound Proxy:** (empty dropdown menu)
- Time Zone:** America/New_York (dropdown menu)
- Credential name:** (empty text field)

Below the 'General' tab is the 'SIP Link Monitoring' section, which includes a dropdown menu set to 'Use Session Manager Configuration'. 'Commit' and 'Cancel' buttons are located at the top right of the form area.

Under *Port*, click **Add**, and then edit the fields in the resulting new row as shown below:

- **Port:** Port number on which the system listens for SIP requests.
- **Protocol:** Transport protocol to be used to send SIP requests.
- **Default Domain:** The domain used for the enterprise (e.g., *avaya.com*).

Defaults can be used for the remaining fields. Click **Commit** to save each SIP Entity definition.

5.3.2. Avaya Aura™ Communication Manager

A SIP Entity must be added for the Communication Manager. To add a SIP Entity, select **SIP Entities** on the left and click on the **New** button on the right. The following screen is displayed. Fill in the following:

Under *General*:

- **Name:** A descriptive name.
- **FQDN or IP Address:** IP address of the signaling interface (e.g., C-LAN board) on the telephony system.
- **Type:** Select *CM*.
- **Location:** Select one of the locations defined previously.
- **Time Zone:** Time zone for this location.

Defaults can be used for the remaining fields. Click **Commit** to save each SIP Entity definition.

5.4. Add Entity Link

The SIP trunk from Session Manager to Communication Manager is described by an Entity link. To add an Entity Link, select **Entity Links** on the left and click on the **New** button (not shown) on the right. Fill in the following fields in the new row that is displayed:

- **Name:** A descriptive name (e.g., *devcon13 Link*).
- **SIP Entity 1:** Select the Session Manager.
- **Protocol:** Select the appropriate protocol.
- **Port:** Port number to which the other system sends SIP requests.
- **SIP Entity 2:** Select the name of Communication Manager.
- **Port:** Port number on which the other system receives SIP requests.
- **Trusted:** Check this box. *Note: If this box is not checked, calls from the associated SIP Entity specified in Section 5.3.2 will be denied.*

Click **Commit** to save the Entity Link definition.

5.5. Define Communication Manager as Managed Element

Before adding SIP users, Communication Manager must be added to System Manager as a managed element. This action allows System Manager to access Communication Manager over its administration interface. Using this administration interface, System Manager will notify Communication Manager when new SIP users are added.

To define Communication Manager as a managed element, select **Elements→Inventory→Manage Elements** on the left and click on the **New** button (not shown) on the right. In the **Application Type** field that is displayed, select **CM**.

In the **New CM Instance** screen, fill in the following fields as follows:

Under *Application*:

- **Name:** Enter an identifier for Communication Manager.
- **Type:** Select *CM* from the drop-down field.
- **Node:** Enter the IP address of the administration interface for Communication Manager.

Under *Attributes*:

- **Login / Password:** Enter the login and password used for administration access.
- **Is SSH Connection:** Enable SSH access.
- **Port:** Enter the port number for SSH administration access (5022).

Defaults can be used for the remaining fields. Click **Commit** to save the settings.

The screenshot shows the Avaya Aura System Manager 6.0 interface. The top navigation bar includes the Avaya logo, the title 'Avaya Aura™ System Manager 6.0', and a user status bar indicating 'Welcome, admin' and 'Last Logged on at August 31, 2010 1:45 PM'. A red breadcrumb trail reads 'Home / Elements / Application Management / Applications / Applications Details'. On the left, a sidebar menu lists various system components like Conferencing, Presence, Application Management, and System Manager. The main content area is titled 'New CM Instance' and contains several expandable sections: 'Application' (with fields for Name: 'devcon13-CM-ES', Type: 'CM', Description: 'devcon13 CM ES', and Node: '10.32.24.10'), 'Port', 'Access Point', 'SNMP Attributes' (with Version set to 'None'), and 'Attributes' (with fields for Login, Password, Confirm Password, Is SSH Connection checked, and Port: '5022'). 'Commit' and 'Cancel' buttons are located at the top right of the form.

5.6. Add Application Sequence

To define an application for Communication Manager, navigate to **Elements**→**Session Manager**→**Application Configuration**→**Applications** on the left and select **New** button (not shown) on the right. Fill in the following fields:

- **Name:** Enter name for application.
- **SIP Entity:** Select the Communication Manager SIP entity.
- **CM System for SIP Entity** Select the Communication Manager managed element.

Click **Commit** to save the Application definition.

The screenshot shows the Avaya Aura System Manager 6.0 interface. The top header includes the Avaya logo, the title "Avaya Aura™ System Manager 6.0", and a welcome message for user "admin" with the last login time "1:45 PM" and date "August 31, 2010". There are links for "Help", "About", "Change Password", and "Log off".

The left sidebar contains a navigation tree with the following items: Elements (expanded), Conferencing, Presence, Application Management, Endpoints, SIP AS 8.1, Feature Management, Inventory, Templates, Session Manager (expanded), Dashboard, Session Manager Administration, Communication Profile Editor, Network Configuration, Device and Location Configuration, Application Configuration (expanded), and Applications.

The main content area is titled "Application Editor" and contains the following fields:

- Name:** A text input field containing "DEVCON-APP".
- SIP Entity:** A dropdown menu showing "devcon13".
- CM System for SIP Entity:** A dropdown menu showing "devcon13-CM-ES" with a "Refresh" button and a link "View/Add CM Systems".
- Description:** A text input field.

Below these fields is a section titled "Application Attributes (optional)" which contains a table with two columns: "Name" and "Value".

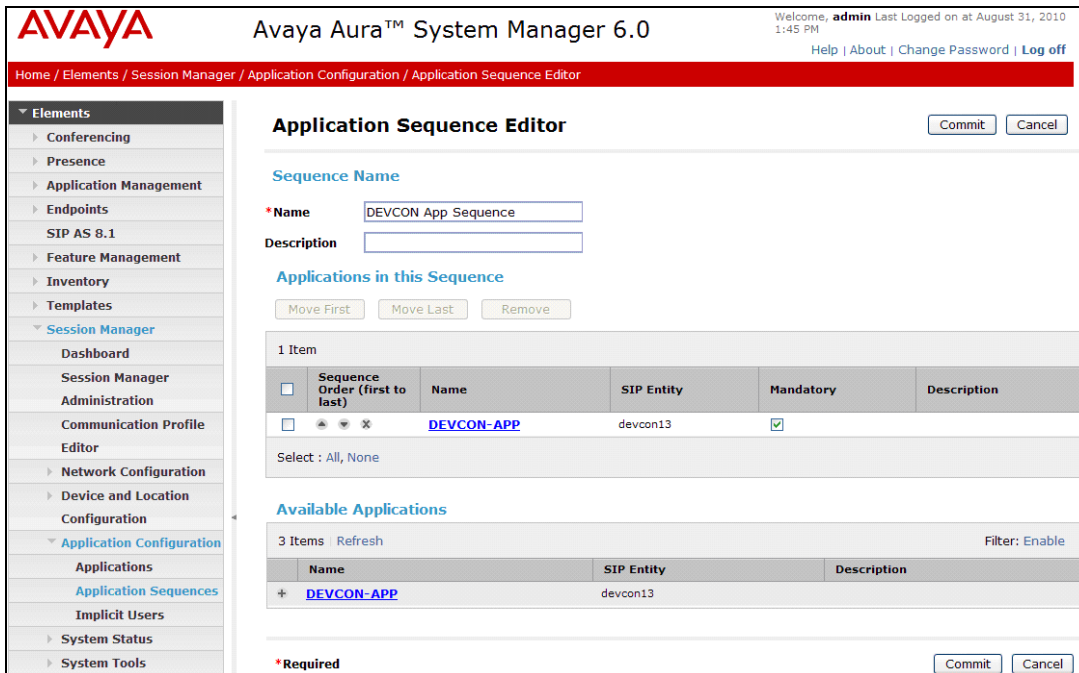

Name	Value
Application Handle	<input type="text"/>
URI Parameters	<input type="text"/>

At the bottom of the form, there is a "Required" section with a "Commit" button and a "Cancel" button.

Next, define the Application Sequence for Communication Manager as shown below.

Verify a new entry is added to the **Applications in this Sequence** table and the **Mandatory** column is  as shown below.

Note: The Application Sequence defined for Communication Manager Evolution Server can only contain a single Application.

The screenshot shows the Avaya Aura System Manager 6.0 interface. The top header includes the Avaya logo, the product name "Avaya Aura™ System Manager 6.0", and a welcome message for user "admin" last logged on at August 31, 2010 1:45 PM. A navigation bar below the header shows the path: Home / Elements / Session Manager / Application Configuration / Application Sequence Editor. On the left is a sidebar menu with categories like Elements, Session Manager, and Application Configuration. The main content area is titled "Application Sequence Editor" and contains several sections: "Sequence Name" with a text input field containing "DEVCON App Sequence"; "Description" with an empty text input field; "Applications in this Sequence" with buttons for "Move First", "Move Last", and "Remove", and a table with 1 item; and "Available Applications" with a "Refresh" button and a table with 3 items. The table in "Applications in this Sequence" has columns: Sequence Order (first to last), Name, SIP Entity, Mandatory, and Description. The single row shows a checkbox, a plus icon, a minus icon, a cross icon, the name "DEVCON-APP", the SIP Entity "devcon13", a checked "Mandatory" checkbox, and an empty "Description" field. Below the table is a "Select : All, None" dropdown. The "Available Applications" table has columns: Name, SIP Entity, and Description. It shows one row with a plus icon, the name "DEVCON-APP", the SIP Entity "devcon13", and an empty "Description" field. At the bottom right of the main content area are "Commit" and "Cancel" buttons.

5.7. Add SIP Users

Add SIP users corresponding to the SoundPoint IP 650 SIP Phone defined in **Section 4.3**. Alternatively, use the option to automatically generate the SIP stations on Communication Manager Evolution Server when adding a new SIP user.

To add new SIP users, expand **Users** and select **Manage Users** from left and select **New** button (not shown) on the right.

Enter values for the following required attributes for a new SIP user in the **General** section of the new user form.

- **Last Name:** Enter the last name of the user.
- **First Name:** Enter the first name of the user.

The screen below shows the information when adding a new SIP user to the sample configuration.

The screenshot shows the Avaya Aura System Manager 6.0 interface. The top header includes the Avaya logo, the title 'Avaya Aura™ System Manager 6.0', and a welcome message for 'admin' last logged on at August 31, 2010, 1:45 PM. There are links for Help, About, Change Password, and Log off. The breadcrumb trail is 'Home / Users / Manage Users / New User'. The left sidebar shows a tree view with 'Users' expanded and 'Manage Users' selected. The main content area is titled 'New User Profile' and has 'Commit' and 'Cancel' buttons. Below the title are tabs for 'General', 'Identity', 'Communication Profile', 'Roles', 'Group Membership', 'Default Contact List', and 'Private Contacts'. The 'General' tab is active, showing fields for 'Last Name' (78500), 'First Name' (Polycom), 'Middle Name', and 'Description'.

Enter values for the following required attributes for a new SIP user in the **Identity** section of the new user form.

- **Login Name:** Enter <extension>@<sip domain> of the user (e.g., 78500@avaya.com).
- **Authentication Type:** Select *Basic*.
- **SMGR Login Password:** Enter the password which will be used to log into System Manager.
- **Confirm Password:** Re-enter the password from above.
- **Shared Communication Profile Password:** Enter the password that will be used by the SIP phone to log into Session Manager.
- **Confirm Password:** Re-enter the password from above.

The screen below shows the information when adding a new SIP user to the sample configuration.

Scroll down to the **Communication Profile** section and select **New** to define a **Communication Profile** for the new SIP user. Enter values for the following required fields:

- **Name:** Enter name of communication profile.
- **Default:** Select field to indicate that this is the default profile.

Click **New** to define a **Communication Address** for the new SIP user. Enter values for the following required fields:

- **Type:** Select *Avaya SIP*.
- **Fully Qualified Address:** Enter extension number and select SIP domain.

The screen below shows the information when adding a new SIP user to the sample configuration. Click **Add**.

The screenshot displays the 'Users' management interface. On the left is a sidebar with 'Users' expanded, showing options like 'Manage Users', 'Public Contact Lists', 'Shared Addresses', and 'System Presence ACLs'. Below this is a 'Help' section with links for creating, editing, and deleting users and contacts. The main area is titled 'Identity' and contains the 'Communication Profile' section. In this section, the 'New' button is highlighted. Below the buttons is a table with one row: 'Primary' under the 'Name' column. Below the table, the 'Name' field is set to 'Primary' and the 'Default' checkbox is checked. The 'Communication Address' section is also visible, showing a table with columns 'Type', 'Handle', and 'Domain'. The table is empty, with a message 'No Records found'. Below the table, the 'Type' is set to 'Avaya SIP' and the 'Fully Qualified Address' is set to '78500' with the domain 'avaya.com' selected. 'Add' and 'Cancel' buttons are at the bottom right.

In the **Endpoint Profile** section, fill in the following fields:

- **System:** Select the managed element corresponding to Communication Manager.
- **Use Existing Stations:** If field is not selected, the station will automatically be added in Communication Manager.
- **Extension:** Enter extension number of SIP user.
- **Template:** Select template for type of SIP phone.
- **Port:** Enter *IP*.
- **Delete Station on Unassign of Station:** Enable field to automatically delete station when **Station Profile** is un-assigned from user.

The screen below shows the information when adding a new SIP user to the sample configuration.

The screenshot displays the 'Communication Profile' configuration page. On the left is a sidebar with navigation links: 'Manage Users', 'Public Contact Lists', 'Shared Addresses', 'System Presence ACLs', and a 'Help' section with links for creating, editing, and deleting users and contacts. The main content area is titled 'Communication Profile' and includes buttons for 'New', 'Delete', 'Done', and 'Cancel'. Below these is a table with one row labeled 'Primary'. The 'Select : None' dropdown is visible. The 'Name' field is set to 'Primary' and 'Default' is checked. The 'Communication Address' section is expanded, showing 'Session Manager Profile' and 'Endpoint Profile' checked. The 'Endpoint Profile' section contains the following fields: 'System' (devcon13-CM-ES), 'Use Existing Endpoints' (unchecked), 'Extension' (78500) with an 'Endpoint Editor' button, 'Template' (DEFAULT_9630SIP_CM_6_0), 'Set Type' (9630SIP), 'Security Code' (empty), 'Port' (IP), 'Voice Mail Number' (empty), and 'Delete Endpoint on Unassign of Endpoint from User' (checked).

5.8. Add Session Manager

To complete the configuration, adding the Session Manager will provide the linkage between Avaya Aura™ System Manager and Avaya Aura™ Session Manager. Expand the **Session Manager** menu on the left and select **Session Manager Administration**. Then click **Add** (not shown), and fill in the fields as described below and shown in the following screen:

Under *Identity*:

- **SIP Entity Name:** Select the name of the SIP Entity added for Avaya Aura™ Session Manager.
- **Description:** Descriptive comment (optional).
- **Management Access Point Host Name/IP:** Enter the IP address of the Avaya Aura™ Session Manager management interface.

Under *Security Module*:

- **Network Mask:** Enter the network mask corresponding to the IP address of Avaya Aura™ Session Manager.
- **Default Gateway:** Enter the IP address of the default gateway for Avaya Aura™ Session Manager.

Use default values for the remaining fields. Click **Save** to add this Session Manager.

6. Configure Polycom SoundPoint® IP 650 SIP Phone

The configuration of the SoundPoint® IP 650 SIP Phone was performed via the phone's menu-driven LCD user interface and its embedded Web interface. The phone's LAN connection interface was initially configured via the phone's LCD screen. To configure the IP parameters for the phone, click the MENU key on the phone and navigate to **Settings→Advanced→Admin Settings→Network Configuration**. A valid password will be required. The rest of the configuration was performed through the phone's embedded Web interface. Refer to [3] for additional information on configuring the SoundPoint® IP 650 SIP Phone.

Note: To verify that the phone is running the compliance-tested SIP application version, press the **Menu** key on the phone, and then select **Status→Platform→Application**. Refer to [3] for upgrade instructions, if required.

From an internet browser, enter `http://<ip-addr>` in the URL field, where `<ip-addr>` is the phone's IP address. Navigate to the **SIP Configuration Parameters** screen shown below. In the **Server 1** section, set the **Address** field to the Session Manager's SIP interface and configure the transport protocol and port used for the SIP messages. In this example, SIP messages were sent using TCP over port 5060.

Note: Although the **Outbound Proxy Address** was configured, it was not required in this test configuration.

The screenshot displays the Polycom SoundPoint IP Configuration web interface. The top navigation bar includes the Polycom logo and tabs for Home, General, Network, SIP, H.323, and Lines. The main heading is "SIP Configuration Parameters:", with sub-tabs for Servers and Local Settings. The "Servers" tab is active, showing a table with two sections: "Outbound Proxy" and "Server 1".

Servers	
Outbound Proxy	
Address	10.32.24.235
Port	5060
Transport	TCPonly
Server 1	
Address	10.32.24.235
Port	5060
Transport	TCPonly
Expires	
Register	1
Retry Timeout	0
Retry Maximum Count	0
Line Seize Timeout	30

Next, scroll down to the **Local Settings** section and configure the **Digitmap** field to cover the dial strings supported by the dial plan. In this configuration, 5-digit numbers starting with '2' and '7' were supported. Click **Submit** and wait until the phone reboots.

Local Settings	
Local SIP Port	<input type="text"/>
Calls Per Line Key	<input type="text"/>
New SDP Type	<input type="radio"/> Enabled <input checked="" type="radio"/> Disabled
Live Communication Server Support	<input type="radio"/> Enabled <input checked="" type="radio"/> Disabled
Non Standard Line Seize	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled
Digitmap	2xxxx 7xxxx [2-9] 11 0T 011xxx.T [0-1]
Digitmap Timeout	3 3 3 3 3
Remove End-Of-Dial Marker	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled
Digitmap Impossible Match	0
top	<input type="button" value="Submit"/>

After the phone reboots, access the **Lines** screen from the phone's embedded Web interface. In the **Identification** section, provide a descriptive **Display Name** and specify the phone's extension in the **Address** field. In the **Authentication User ID** and **Authentication Password** fields, configure the extension and password, respectively, used to register with Session Manager. The content of the **Label** field will be used as the phone's call appearance label on the display. The **Number Of Line Keys** field was set to 3 for the compliance test.

7. General Test Approach and Test Results

To verify interoperability of the SoundPoint IP 650 SIP Phone with Communication Manager and Session Manager, calls were made between Polycom SoundPoint IP 650 SIP Phones and Avaya SIP, H.323, and digital stations using various codec settings and exercising common PBX features. The telephony features listed in **Section 1.1** were activated and deactivated using phone buttons and FNEs. All test cases passed.

8. Verification Steps

The following steps can be used to verify and/or troubleshoot installations in the field.

1. Verify that the SoundPoint IP 650 SIP Phones have successfully registered with Session Manager.
2. Verify basic telephony features by establishing calls between a SoundPoint IP 650 SIP Phone and another phone.
3. Call a SoundPoint IP 650 SIP phone that currently has no voice messages, and leave a message. Verify that the message waiting indicator (i.e., Voicemail button) illuminates. Call the voicemail system and retrieve voice messages. Verify that after hearing all messages, that the message waiting indicator is extinguished.

9. Conclusion

These Application Notes have described the administration steps required to integrate the Polycom SoundPoint IP 650 SIP Phone with Avaya AuraTM Communication Manager and Avaya AuraTM Session Manager. The SoundPoint IP 650 SIP Phone successfully registered with Session Manager and basic telephony features were verified. All test cases passed.
