

Avaya Solution & Interoperability Test Lab

Application Notes for Jabra Direct and Speak 710 Bluetooth/USB Speakerphone with Avaya one-X® Agent - Issue 1.0

Abstract

These Application Notes describe the configuration steps required to integrate Jabra Direct and Speak 710 Bluetooth/USB speakerphone with Avaya one-X® Agent.

Readers should pay particular attention to the scope of testing as outlined in **Section 2.1**, as well as observations noted in **Section 2.2** to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the steps required to integrate Jabra Direct and Speak 710 Bluetooth/USB (Speak 710) speakerphone with Avaya one-X® Agent. Direct is a PC application that enables Jabra USB devices to have call control over soft phone applications, including Speak 710 and one-X® Agent respectively. Speaker 710 has two kinds of connection to PC, one with a provided wired USB cable and another via Link 370 Bluetooth USB dongle. Link 370 also comes with the Speaker 710.

2. General Test Approach and Test Results

The interoperability compliance test included feature and serviceability testing. The testing utilized two connection methods of Speak 710 to Direct: USB cable and USB Bluetooth dongle to test with the one-X Agent. The feature testing focused on placing calls to and from one-X Agent using the Direction application and Speak 710 speakerphone, answering and ending calls using the call control button on the speakerphone, and verifying two-way audio. The call types included calls between local extensions, and with the PSTN.

The serviceability testing focused on verifying the usability of the Jabra speakerphone solution after restarting one-X Agent and reconnecting the Jabra speakerphone to the PC.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in these DevConnect Application Notes included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

Avaya's formal testing and Declaration of Conformity is provided only on the headsets/handsets that carry the Avaya brand or logo. Avaya may conduct testing of non-Avaya headset/handset to determine interoperability with Avaya phones. However, Avaya does not conduct the testing of non-Avaya headsets/handsets for: Acoustic Pressure, Safety, Hearing Aid Compliance, EMC regulations, or any other tests to ensure conformity with safety, audio quality, long-term reliability or any regulation requirements. As a result, Avaya makes no representations whether a particular non-Avaya headset will work with Avaya's telephones or with a different generation of the same Avaya telephone.

Since there is no industry standard for handset interfaces, different manufacturers utilize different handset/headset interfaces with their telephones. Therefore, any claim made by a headset vendor that its product is compatible with Avaya telephones does not equate to a guarantee that the headset will provide adequate safety protection or audio quality.

2.1. Interoperability Compliance Testing

All test cases were performed manually. The following features were verified:

- Placing calls to and from internal extensions to verify two-way audio.
- Placing calls to and from the PSTN and to Voicemail to verify two-way audio.
- Answering and ending calls using the call control button on the speakerphone.
- Verifying incoming call notification on speakerphone.
- Verifying call ended notification on speakerphone.

For the serviceability testing, the speakerphone was reconnected to one-X Agent and the PC was restarted to verify proper operation of the speakerphone.

2.2. Test Results

All test cases were executed and passed. .

2.3. Support

For support on this Jabra speakerphone solution, contact Jabra Technical Support at:

- Phone: (800) 697-8757
- Website: <http://www.jabra.com/NA-US/Support/pages/Default.aspx>
- Email: JabraSupport.US@jabra.com.

3. Reference Configuration

Figure 1 illustrates a sample configuration with an Avaya SIP-based network that includes the following Avaya products:

- Avaya Aura® Communication Manager running on a virtualized environment with an Avaya G450 Media Gateway.
- Avaya Aura® Session Manager connected to Communication Manager via a SIP trunk and acting as a Registrar/Proxy for SIP telephones.
- Avaya Aura® System Manager used to configure Session Manager.

In addition, the Direct application was installed on a PC that also has the one-X Agent soft phone installed.

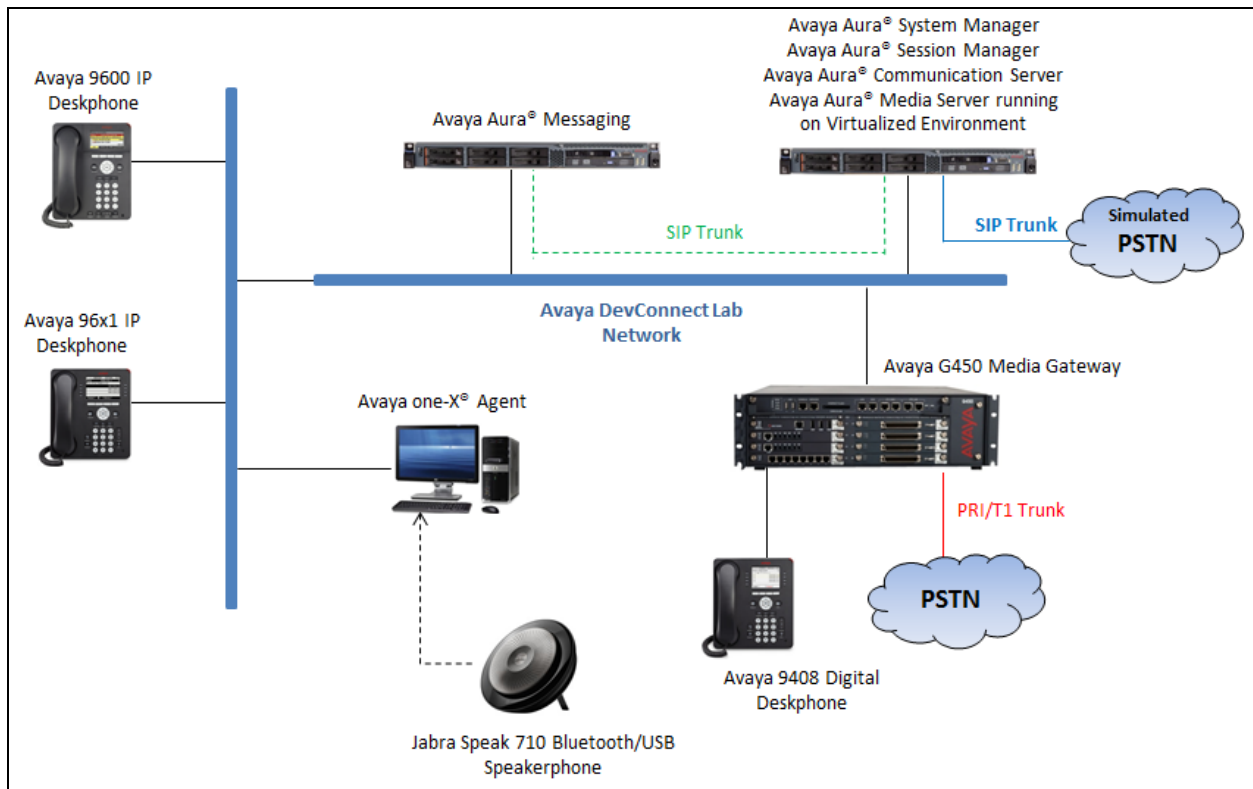

Figure 1: Test Configuration Diagram

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® Communication Manager running on a virtual platform	7.1.0.532.0
Avaya Aura® Session Manager running on a virtual platform	7.1.0.0.710028
Avaya Aura® System Manager running on a virtual platform	7.1.0.0.1
Avaya Aura Messaging running on a virtual platform	7.0 SP0
Avaya Aura® Media Server running on a virtual platform	7.8.0.309
Avaya one-X® Agent running on Microsoft Windows 10 Professional	2.5.10
Avaya 9611G IP Deskphone	7.0.1.2 (SIP) 6.64 (H323)
Avaya 9640 IP Deskphone	3.25
Avaya 9408 Digital Deskphone	V 2.0
Jabra Direct	3.8.689
Jabra Link 370 (USB Bluetooth dongle)	1.14.0
Jabra Speak 710	1.10.0

5. Configure Avaya Aura® Communication Manager

Configuration and verification operations on Communication Manager illustrated in this section were all performed using Avaya Site Administrator emulation mode. The information provided in this section describes the configuration of Communication Manager for this solution. It is implied a working system is already in place, including SIP trunks to Session Manager. For all other provisioning information such as initial installation and configuration, please refer to the product documentation in **Section 10**. The configuration described in this section can be summarized as follows:

- Verify System Capacity
- Define the Dial Plan
- Add Agent Station
- Add Agent Login ID

Note: Any settings not in **Bold** in the following screen shots may be left as default.

5.1. Verify System Capacity

The license file installed on the system controls these attributes. If a required feature is not enabled or there is insufficient capacity, contact an authorized Avaya sales representative. Use the **display system-parameters customer-options** command to determine these values. On **Page 11**, verify that the **IP_Agent** allowed in the system is sufficient.

```
display system-parameters customer-options                                age 11 of 12
                                MAXIMUM IP REGISTRATIONS BY PRODUCT ID

Product ID  Rel. Limit      Used
AgentSC    * : 10000      0
IP_API_A   * : 18000      0
IP_Agent  * : 18000     1
IP_NonAgt  * : 18000      0
IP_Phone   * : 18000      3
IP_ROMax   * : 18000      0
IP_Soft    * : 18000      0
IP_Supv    * : 18000      0
IP_eCons   * : 128        0
oneX_Comm  * : 18000      0
           : 0          0
           : 0          0
           : 0          0
           : 0          0
           : 0          0

(NOTE: You must logoff & login to effect the permission changes.)
```

5.2. Define the Dial Plan

Use the **change dialplan analysis** command to define the dial plan used in the system. This includes all telephone extensions. In the sample configuration, telephone extensions are 4 digits long and begin with **33** and **34**.

```
change dialplan analysis Page 1 of 12
                                DIAL PLAN ANALYSIS TABLE
                                Location: all Percent Full: 1

Dialed   Total   Call   Dialed   Total   Call   Dialed   Total   Call
String   Length Type   String   Length Type   String   Length Type
33      4    ext
34      4    ext
*         3     fac
#         3     fac
```

5.3. Add Agent Station

Issue **add station <n>** command, where **n** is an available extension number. Enter the following values for the specified fields, and retain the default values for the remaining fields.

- **Type:** Enter a desired station type, in this case **9641**.
- **Name:** A descriptive name.
- **Security Code:** Enter a valid code ex: 1234.
- **IP SoftPhone:** y

```
add station 3301 Page 1 of 6
                                STATION

Extension: 3301           Lock Messages? n           BCC: 0
  Type: 9641             Security Code: 1234      TN: 1

5.4. Add Agent Login ID

Issue **add agent-loginID <n>** command, where **n** is an available extension number. Enter the following values on **page 1** for the specified fields, and retain the default values for the remaining fields.

- **Name:** A descriptive name.
- **Password:** Enter agent password e.g. **1234**.

```

add agent-loginID 1000                                     Page 1 of 2
                                     AGENT LOGINID

6. Configure Avaya one-X® Agent

This section shows how to configure one-X Agent for integration with Speaker 710 speakerphone.

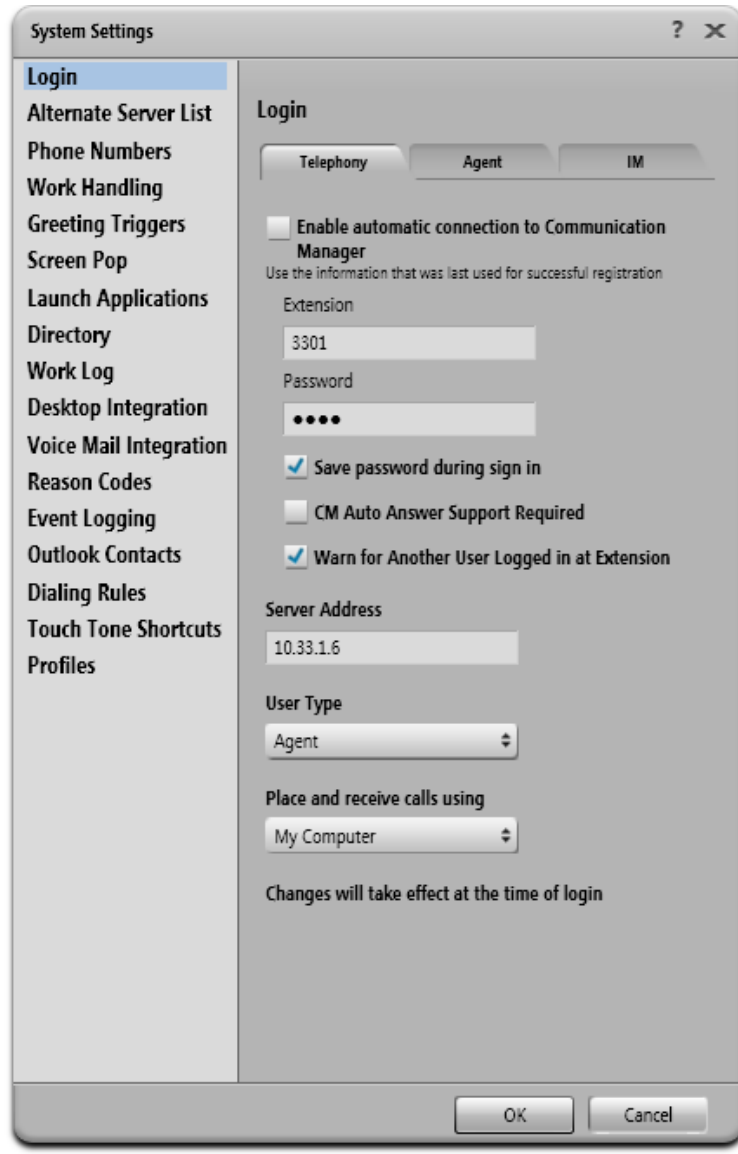

From one-X Agent window, navigate to the setting icon  → **Agent Preferences** → **Audio** → **Advanced** and select *Speakers (Jabra Speak 710)* and *Microphone (Jabra Speak 710)* in the **Playback Device** and **Record Device** fields as shown below.

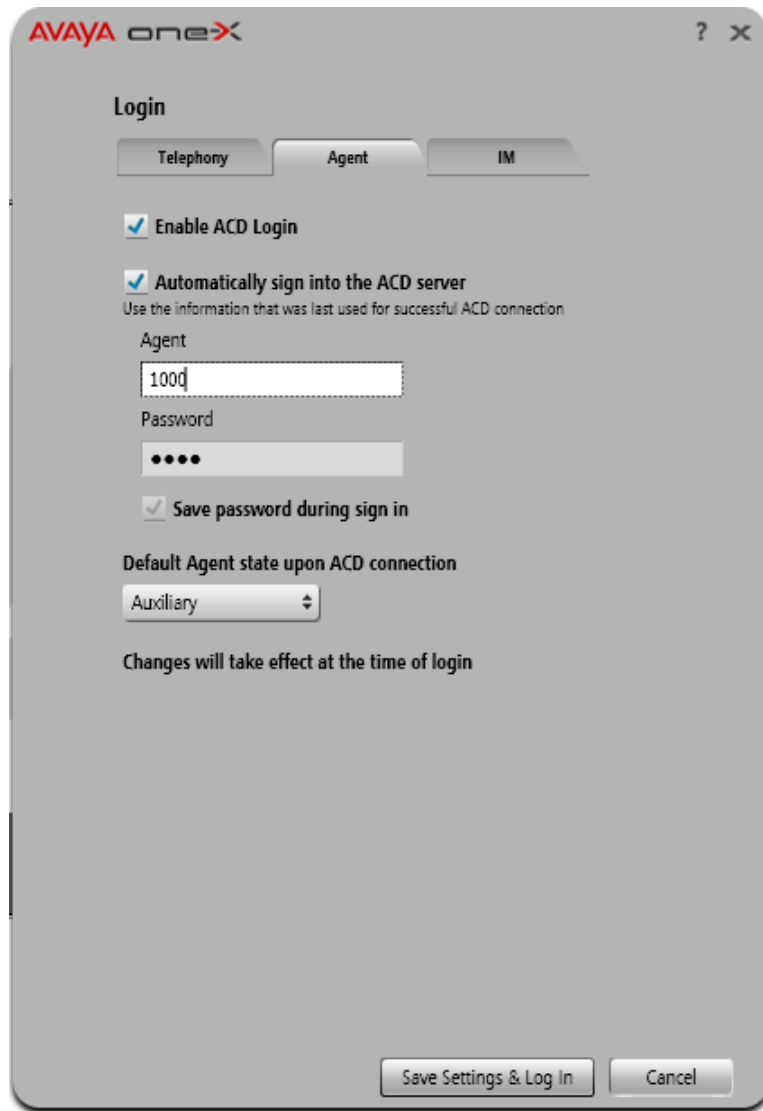

In case of Jabra Link 370 USB Bluetooth dongle being used, select the Jabra Link 370 values respectively as shown below.

From the one-X Agent window, click  → **System Settings** → **Login** and enter the station extension and password as configured in **Section 5.3**.

In the Agent tab, select **Enable ACD Login** and **Automatically sign into the ACD server** and enter the agent login ID password as configured in **Section 5.4** in the **Agent** and **Password** fields.

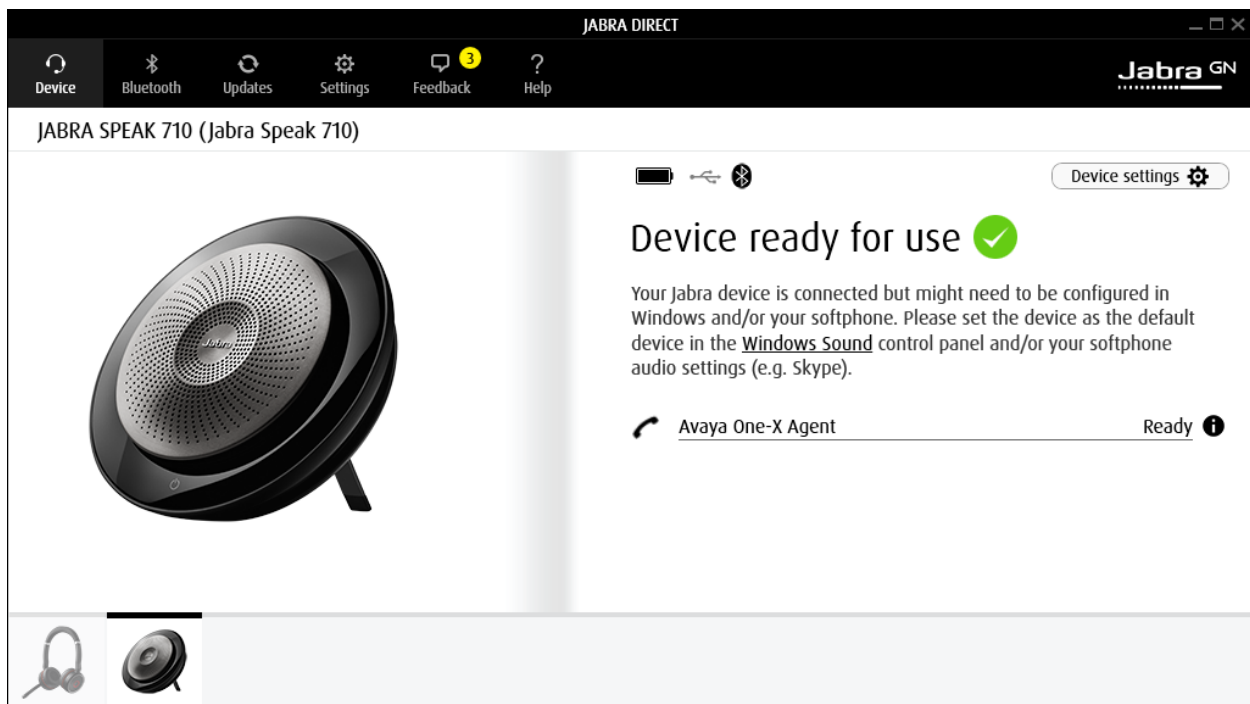

This window shows the one-X Agent successfully registers to Communication Manager.

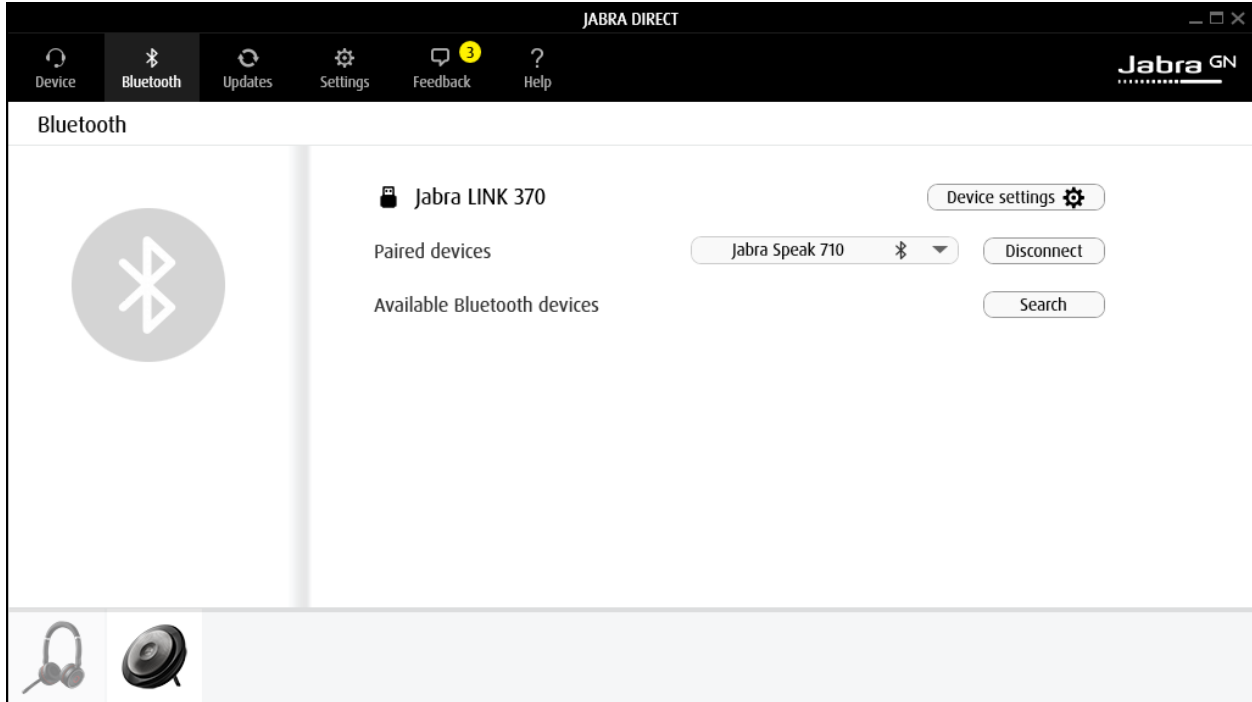

7. Configure Jabra Direct

Direct is PC software that can be downloaded from Jabra website at <http://www.jabra.ca/software-and-services/jabra-direct>. Direct enables Speak 710 to have call control over one-X Agent. This section assumes that Direct is already installed and updated to the latest version. Direct automatically detects Speaker 710 and the connection method to the PC.

The picture below shows the **Device** tab in Direct dashboard having the Speaker 710 speakerphone connected to the PC via USB Bluetooth dongle, it displays “Device ready for use” with one-X Agent in **Ready** state.

The **Bluetooth** tab displays the Link 370 USB dongle that paired with Speak 710.

8. Verification Steps

This section verifies that Jabra Direct and Speak 710 Bluetooth/USB speakerphone has been successfully integrated Avaya one-X Agent.

1. Verify that the Speak 710 speakerphone has been successfully installed and is ready for use with the one-X Agent.
2. Once the Speaker 710 speakerphone is selected in the one-X Agent, verify that incoming and outgoing calls can be established with two-way audio to the speakerphone.
3. Verify that the Speaker 710 speakerphone is able to control call functions from the speakerphone such as mute/un-mute, hold/un-hold and disconnect the call.

9. Conclusion

These Application Notes describe the configuration steps required to integrate Jabra Direct and Speak 710 Bluetooth/USB speakerphone with Avaya one-X® Agent. All test cases were completed successfully; refer to **Section 2.2** for details.

10. Additional References
