

Avaya Solution & Interoperability Test Lab

Application Notes for configuring inContact Call Recording from inContact to interoperate with Avaya Aura® Communication Manager R7.0 and Avaya Aura® Application Enablement Services R7.0 using DMCC Multi-Registration to record calls - Issue 1.0

Abstract

These Application Notes describe the configuration steps for inContact Call Recording to interoperate with the Avaya solution consisting of an Avaya Aura® Communication Manager R7.0, an Avaya Aura® Session Manager R7.0, and Avaya Aura® Application Enablement Services R7.0 using Multi-Registration.

Readers should pay attention to Section 2, in particular the scope of testing as outlined in Section 2.1 as well as the observations noted in Section 2.2, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration steps for the inContact Call Recording R16.2 from inContact to interoperate with the Avaya solution consisting of an Avaya Aura® Communication Manager R7.0, an Avaya Aura® Session Manager R7.0, and Avaya Aura® Application Enablement Services R7.0. inContact Call Recording uses Communication Manager's Multiple Registrations feature via the Application Enablement Services (AES) Device, Media, and Call Control (DMCC) interface and the Telephony Services API (TSAPI) to capture the audio and call details for call recording on various Communication Manager endpoints, listed in **Section 4**.

DMCC works by allowing software vendors to create soft phones on a recording server, and use them to monitor and record Avaya phonesets. This is purely a software solution and does not require telephony boards or any wiring beyond a typical network infrastructure. The DMCC API associated with the AES server monitors the digital and VoIP extensions. The application uses the AE Services DMCC service to register itself as a recording device at the target extension. When the target extension joins a call, the application automatically receives the call's aggregated RTP media stream via the recording device and records the call.

inContact Call Recording is just one part of inContact's Call suite designed to improve the contact center's operational performance. Call recording provides the flexibility, efficiency and strength to handle all recording needs in terms of audio and screen/desktop capture. inContact Call Recording interface allows for simple configurations and flexibility to make changes within the product. The Hybrid recording compatibility with various telephony platforms allows for a seamless integration with the Avaya solution.

Note: The recording of SIP phones is currently not supported.

2. General Test Approach and Test Results

The interoperability compliance testing evaluated the ability of the inContact Call Recording to carry out call recording in a variety of scenarios using DMCC Multi-Registration with AES and Communication Manager. A range of Avaya endpoints were used in the compliance testing all of which are listed in **Section 4**.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

2.1. Interoperability Compliance Testing

The interoperability compliance test included both feature functionality and serviceability testing. The feature functionality testing focused on placing and recording calls in different call scenarios with good quality audio recordings and accurate call records. The tests included:

- **Inbound/Outbound calls** – Test call recording for inbound and outbound calls to the Communication Manager to and from PSTN callers.
- **Hold/Transferred/Conference calls** – Test call recording for calls transferred to and in conference with PSTN callers.
- **Forwarded calls** - Test call recording for calls that were forwarded to various endpoints.
- **Feature calls** - Test call recording for calls that are parked or picked up using Call Park and Call Pickup.
- **Calls to Elite Agents** – Test call recording for calls to Communication Manager agents logged into one-X® Agent.
- **Serviceability testing** - The behavior of inContact Call Recording under different simulated failure conditions.

2.2. Test Results

All functionality and serviceability test cases were completed successfully, except for the following feature test which had an issue as follows.

1. **Call Park.** The un-parked call is not being recorded. It appears that there are no events being sent for un-parking a call by Communication Manager. Modification Report [CM-9860] has been raised with the Communication Manager support team. A fix for this issue will be implemented for release 7.1 of Communication Manager.
2. **The Recording of SIP telephones is currently not supported.** There were issues observed when SIP telephones were involved in conference or transfer scenarios, therefore these endpoints cannot be supported.
3. **Softphones** both one-X® Communicator and one-X® Agent, took up to 120 seconds after startup before inContact successfully registered with them in order to record calls, once registered there was no issue.

2.3. Support

Technical support can be obtained for inContact Call Recording from the website <http://www.uptivity.com/contact> or from the following.

Telephone

Toll-free: 888-922-5526

Direct/International: 614-340-3346

Fax: 614-340-4840

Support: 888-922-5526, option 2

Email

support@uptivity.com

3. Reference Configuration

The configuration in **Figure 1** was used to compliance test inContact Call Recording with the Avaya solution using DMCC Multi-Registration to record calls. The inContact server is setup for DMCC Multi-Registration mode and connects to the AES.

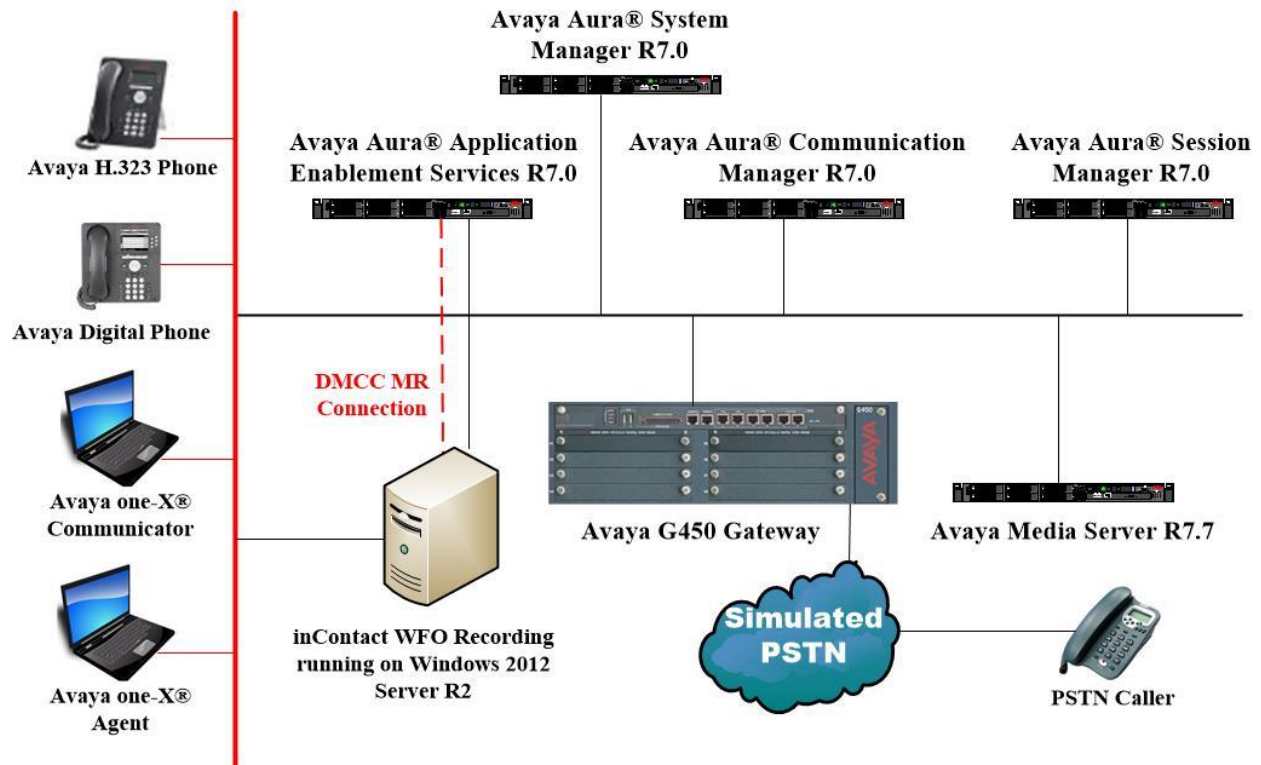

Figure 1: Connection of inContact Call Recording R16.2 from inContact with Avaya Aura® Communication Manager R7.0, Avaya Aura® Session Manager R7.0 and Avaya Aura® Application Enablement Services R7.0

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® System Manager running on a virtual server	System Manager 7.0.1.1 Build No. - 7.0.0.0.16266 Software Update Revision No: 7.0.1.1.065378 Service Pack 1
Avaya Aura® Session Manager running on a virtual server	Session Manager R7.0 SP1 Build No. – 7.0.1.1.701114
Avaya Aura® Communication Manager running on a virtual server	R7.0 R017x.00.0.441.0 00.0.441.0-23169
Avaya Aura® Application Enablement Services running on a virtual server	R7.0 Build No – 7.0.1.0.2.15-0
Avaya Media Server running on a virtual server	Media Server SYSTEM R7.7.0.8 Media Server R7.7.0.200
Avaya G450 Gateway	37.19.0 /1
Avaya 9608 H323 Deskphone	96x1 H323 Release 6.6.028
Avaya 9620 H323 Deskphone	9600 H323 S3.220A
Avaya 9408 Digital Deskphone	V2.0
Avaya one-X® Communicator H.323	R6.2.4.07-FP4
Avaya one-X® Agent	R 2.5.50022.0
inContact Call Recording running Windows 2012 Server R2	R16.2

5. Configure Avaya Aura® Communication Manager

The information provided in this section describes the configuration of Communication Manager relevant to this solution. For all other provisioning information such as initial installation and configuration, please refer to the product documentation in **Section 10**.

The configuration illustrated in this section was performed using Communication Manager System Administration Terminal (SAT).

5.1. Verify System Features

Use the **display system-parameters customer-options** command to verify that Communication Manager has permissions for features illustrated in these Application Notes. On **Page 3**, ensure that **Computer Telephony Adjunct Links?** is set to **y** as shown below.

display system-parameters customer-options		Page	3 of 11
OPTIONAL FEATURES			
Abbreviated Dialing Enhanced List?	y	Audible Message Waiting?	y
Access Security Gateway (ASG)?	n	Authorization Codes?	y

5.2. Note procr IP Address for Avaya Aura® Application Enablement Services Connectivity

Display the procr IP address by using the command **display node-names ip** and noting the IP address for the **procr** and **AES (aes70vmpg)**.

display node-names ip		Page	1 of 2
IP NODE NAMES			
Name	IP Address		
SM100	10.10.40.12		
aes70vmpg	10.10.40.26		
default	0.0.0.0		
G450	10.10.40.15		
procr	10.10.40.13		

5.3. Configure Transport Link for Avaya Aura® Application Enablement Services Connectivity

To administer the transport link to AES use the **change ip-services** command. On **Page 1** add an entry with the following values:

- **Service Type:** Should be set to **AESVCS**.
- **Enabled:** Set to **y**.
- **Local Node:** Set to the node name assigned for the procr in **Section 5.2**
- **Local Port:** Retain the default value of **8765**.

change ip-services					Page	1 of	4
IP SERVICES							
Service Type	Enabled	Local Node	Local Port	Remote Node	Remote Port		
AESVCS	y	procr	8765				

Go to **Page 4** of the **ip-services** form and enter the following values:

- **AE Services Server:** Name obtained from the AES server, in this case **aes70vmpg**.
- **Password:** Enter a password to be administered on the AES server.
- **Enabled:** Set to **y**.

Note: The password entered for **Password** field must match the password on the AES server in **Section 6.2**. The **AE Services Server** must match the administered name for the AES server; this is created as part of the AES installation, and can be obtained from the AES server by typing **uname -n** at the Linux command prompt.

change ip-services				Page	4 of 4
AE Services Administration					
Server ID	AE Services Server	Password	Enabled	Status	
1:	aes70vmpg	*****	y	idle	
2:					
3:					

5.4. Configure CTI Link for TSAPI Service

Add a CTI link using the **add cti-link n** command, where **n** is the cti-link number. In the example shown below this is **1**. Enter an available extension number in the **Extension** field. Enter **ADJ-IP** in the **Type** field, and a descriptive name in the **Name** field. Default values may be used in the remaining fields.

add cti-link 1		Page 1 of 3	
CTI LINK			
CTI Link: 1			
Extension: 7999			
Type: ADJ-IP			
		COR: 1	
Name: aes70vmpg			

5.5. Configure H323 Stations for Multi-Registration

All endpoints that are to be monitored by inContact will need to have IP Softphone set to y. IP Softphone must be enabled in order for Multi-Registration to work. Type **change station x** where x is the extension number of the station to be monitored. Also note this extension number for configuration required in **Section 7.1**. Note the **Security Code** and ensure that **IP SoftPhone** is set to y.

change station x	Page 1 of 6	
STATION		
Extension: x	Lock Messages? n	BCC: 0
Type: 9608	Security Code: 1234	TN: 1
Port: S00101	Coverage Path 1:	COR: 1
Name: Extension	Coverage Path 2:	COS: 1
	Hunt-to Station:	
STATION OPTIONS		
	Time of Day Lock Table:	
Loss Group: 19	Personalized Ringing Pattern: 1	
	Message Lamp Ext:	
Speakerphone: 2-way	Mute Button Enabled? y	
Display Language: english		
Survivable GK Node Name:		
Survivable COR: internal	Media Complex Ext:	
Survivable Trunk Dest? y	IP SoftPhone? y	
	IP Video Softphone? n	
	Short/Prefixed Registration Allowed: default	

6. Configure Avaya Aura® Application Enablement Services

This section provides the procedures for configuring Application Enablement Services. The procedures fall into the following areas:

- Verify Licensing
- Create Switch Connection
- Administer TSAPI link
- Identify Tlinks
- Enable TSAPI and DMCC Ports
- Create CTI User
- Associate Devices with CTI User

6.1. Verify Licensing

To access the AES Management Console, enter **https://<ip-addr>** as the URL in an Internet browser, where <ip-addr> is the IP address of AES. At the login screen displayed, log in with the appropriate credentials and then select the **Login** button.

The Application Enablement Services Management Console appears displaying the **Welcome to OAM** screen (not shown). Select **AE Services** and verify that both the TSAPI and DMCC Service is licensed by ensuring that **TSAPI Service** is in the list of **Services** and that the **License Mode** is showing **NORMAL MODE** and the same for the **DMCC Service**. If not, contact an Avaya support representative to acquire the proper license for your solution.

For status on actual services, please use [Status and Control](#)

* -- For more detail, please mouse over the Cause, you'll see the tooltip, or go to help page.

6.2. Create Switch Connection

From the AES Management Console navigate to **Communication Manager Interface** → **Switch Connections** to set up a switch connection. Enter a name for the Switch Connection to be added and click the **Add Connection** button.

Switch Connections

cm70vmppg x Add Connection

Connection Name	Processor Ethernet	Msg Period	Number of Active Connections

Edit Connection Edit PE/CLAN IPs Edit H.323 Gatekeeper Delete Connection Survivability Hierarchy

In the resulting screen enter the **Switch Password**; the Switch Password must be the same as that entered into Communication Manager AE Services Administration screen via the **change ip-services** command, described in **Section 5.3**. The remaining fields should show as below. Click **Apply** to save changes.

The screenshot shows the Avaya Application Enablement Services Management Console. The left sidebar contains a navigation menu with the following items: AE Services, Communication Manager Interface (selected), Switch Connections (highlighted with a red box), Dial Plan, High Availability, Licensing, Maintenance, Networking, Security, Status, User Management, Utilities, and Help. The main content area is titled 'Connection Details - cm70vmppg'. It contains the following fields: Switch Password (password field), Confirm Switch Password (password field), Msg Period (30 Minutes (1 - 72)), Provide AE Services certificate to switch (checkbox), Secure H323 Connection (checkbox), and Processor Ethernet (checked checkbox). At the bottom of the form are 'Apply' and 'Cancel' buttons, with the 'Apply' button highlighted by a red box.

From the **Switch Connections** screen, select the radio button for the recently added switch connection and select the **Edit PE/CLAN IPs** button (not shown, see screen at the bottom of the previous page). In the resulting screen, enter the IP address of the procr as shown in **Section 5.2** that will be used for the AES connection and select the **Add/Edit Name or IP** button.

The screenshot shows the Avaya Application Enablement Services Management Console. The left sidebar is the same as the previous screenshot, with 'Switch Connections' highlighted. The main content area is titled 'Edit Processor Ethernet IP - cm70vmppg'. It contains a text input field with the value '10.10.40.13' and an 'Add/Edit Name or IP' button highlighted with a red box. Below this is a table with one row containing the value '10.10.40.13' under the header 'Name or IP Address'. At the bottom of the form is a 'Back' button.

6.3. Administer TSAPI link

From the Application Enablement Services Management Console, select **AE Services** → **TSAPI** → **TSAPI Links**. Select **Add Link** button as shown in the screen below.

On the **Add TSAPI Links** screen (or the **Edit TSAPI Links** screen to edit a previously configured TSAPI Link as shown below), enter the following values:

- **Link:** Use the drop-down list to select an unused link number.
- **Switch Connection:** Choose the switch connection **cm70vmpg**, which has already been configured in **Section 6.2** from the drop-down list.
- **Switch CTI Link Number:** Corresponding CTI link number configured in **Section 5.4** which is **1**.
- **ASAI Link Version:** This can be left at the default value of **5**.
- **Security:** This can be left at the default value of **both**.

Once completed, select **Apply Changes**.

Another screen appears for confirmation of the changes made. Choose **Apply**.

The screenshot shows the Avaya Application Enablement Services Management Console. On the left is a navigation menu with 'AE Services' expanded, showing 'CVLAN', 'DLG', 'DMCC', 'SMS', 'TSAPI' (selected), 'TSAPI Links', 'TSAPI Properties', 'TWS', and 'Communication Manager Interface'. The main area displays a dialog titled 'Apply Changes to Link'. It contains a warning: 'Warning! Are you sure you want to apply the changes? These changes can only take effect when the TSAPI server restarts.' Below the warning is a yellow triangle icon and the text: 'Please use the Maintenance -> Service Controller page to restart the TSAPI server.' At the bottom of the dialog are two buttons: 'Apply' (highlighted with a red box) and 'Cancel'.

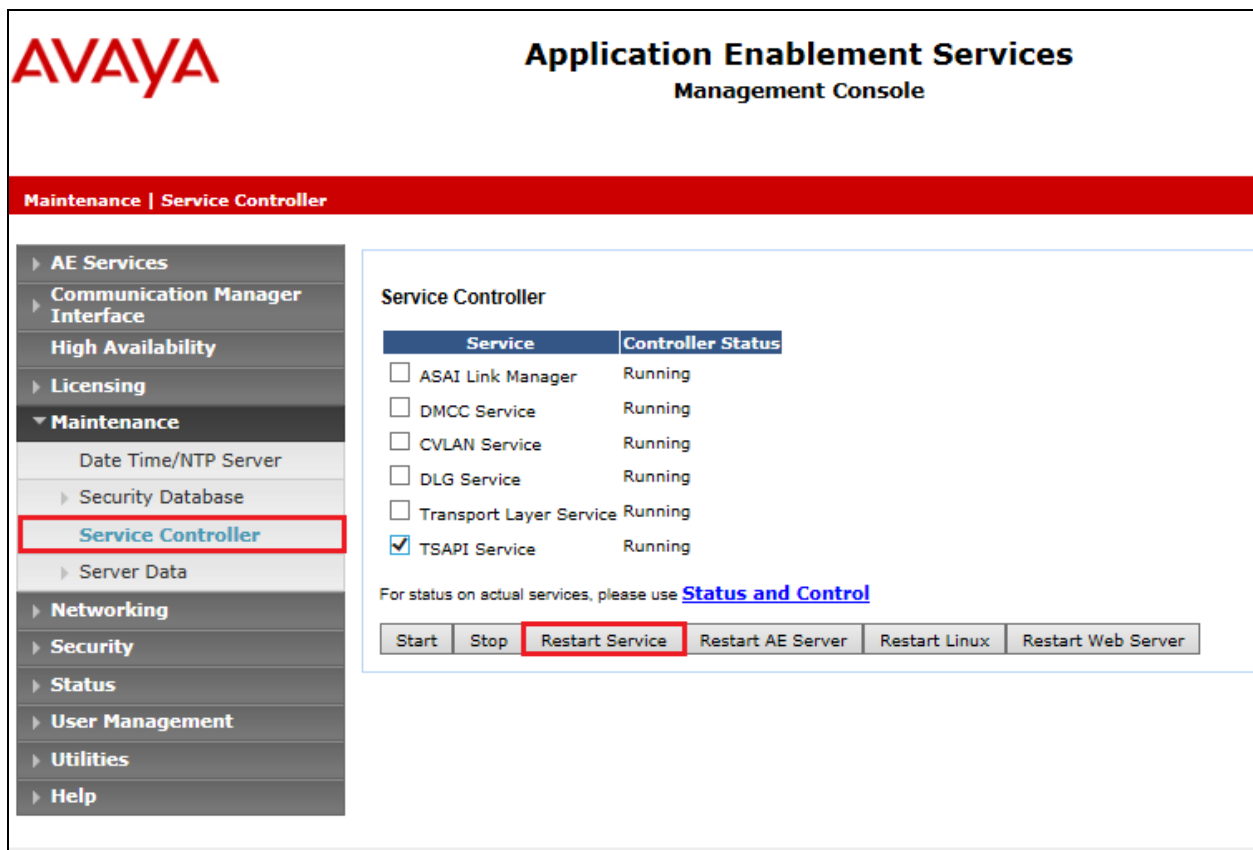

When the TSAPI Link is completed, it should resemble the screen below.

The screenshot shows the Avaya Application Enablement Services Management Console after the link has been applied. The top right corner displays system information: 'Welcome! User: cusr', 'Last login: Tue Nov 17 10:07:45 2015 from 10.10.40.222', 'Number of prior failed login attempts: 1', 'HostName/IP: aes70vmppg', 'Server Offer Type: VIRTUAL_APPLIANCE_ON_VMWARE', 'SW Version: 7.0.0.0.0.13-0', 'Server Date and Time: Tue Nov 24 16:26:08 GMT 2015', and 'HA Status: Not Configured'. The navigation menu on the left is expanded to 'TSAPI Links'. The main area shows a table titled 'TSAPI Links' with the following data:

Link	Switch Connection	Switch CTI Link #	ASAI Link Version	Security
1	cm70vmppg	1	5	Both

Below the table are three buttons: 'Add Link', 'Edit Link', and 'Delete Link'.

The TSAPI Service must be restarted to effect the changes made in this section. From the Management Console menu, navigate to **Maintenance** → **Service Controller**. On the Service Controller screen, tick the **TSAPI Service** and select **Restart Service**.

Start Stop **Restart Service** Restart AE Server Restart Linux Restart Web Server

6.4. Identify Tlinks

Navigate to **Security** → **Security Database** → **Tlinks**. Verify the value of the **Tlink Name**. This will be needed to configure the inContact Call Recording in **Section 7.3**.

The screenshot displays the Avaya Application Enablement Services Management Console. The top header features the Avaya logo and the title "Application Enablement Services Management Console". A red navigation bar contains the text "Security | Security Database | Tlinks". On the left, a sidebar menu lists various services, with "Security Database" and its sub-item "Tlinks" highlighted with red boxes. The main content area, titled "Tlinks", shows a "Tlink Name" section with two radio button options: "AVAYA#CM70VMPG#CSTA#AES70VMPG" (selected) and "AVAYA#CM70VMPG#CSTA-S#AES70VMPG". A "Delete Tlink" button is located below these options.

6.5. Enable TSAPI and DMCC Ports

To ensure that TSAPI ports are enabled, navigate to **Networking → Ports**. Ensure that the TSAPI ports are set to **Enabled** as shown below. Ensure that the **DMCC Server Ports** are also **Enabled** and take note of the **Unencrypted Port 4721** which will be used later in **Section 7.1**.

6.6. Create CTI User

A User ID and password needs to be configured for the inContact Call Recording to communicate with the Application Enablement Services server. Navigate to the **User Management** → **User Admin** screen then choose the **Add User** option.

In the **Add User** screen shown below, enter the following values:

- **User Id** - This will be used by the inContact Call Recording setup in **Section 7.1** and **Section 7.3**.
- **Common Name** and **Surname** - Descriptive names need to be entered.
- **User Password** and **Confirm Password** - This will be used with inContact Call Recording setup in **Section 7.1** and **Section 7.3**.
- **CT User** - Select **Yes** from the drop-down menu.

Click on **Apply Changes** at the bottom of the screen.

6.7. Associate Devices with CTI User

Navigate to **Security** → **Security Database** → **CTI Users** → **List All Users**. Select the CTI user added in **Section 6.6** and click on **Edit**.

The screenshot shows the Avaya Application Enablement Services Management Console. The left sidebar contains a navigation menu with the following items: AE Services, Communication Manager Interface, High Availability, Licensing, Maintenance, Networking, Security (expanded), Account Management, Audit, Certificate Management, Enterprise Directory, Host AA, PAM, Security Database (expanded), Control, CTI Users (expanded), and List All Users (highlighted with a red box). The main content area is titled 'CTI Users' and contains a table with two columns: 'User ID' and 'Common Name'. The table lists two users: 'enghouse' and 'incontact'. The 'incontact' user is selected with a radio button. Below the table are two buttons: 'Edit' (highlighted with a red box) and 'List All'.

User ID	Common Name

7.1. Create Voice Board

Click on the **Administration** tab and select **Recorder Settings** → **Voice Boards** in the left window, click on **Add** at the top right of the main window.

Select **Avaya DMCC** as the **Hardware Type**.

Enter the **AES/DMCC Host** information which will be the IP Address of the AES. The DMCC connection can be secure or unsecure, for compliance testing **Secure DMCC Connection** was set to **No**. The **DMCC Port** for an unsecure connection is set to **4721** and can be found in **Section 6.5**. Choose a suitable **DMCC Application Name** and enter the **DMCC User** and **Password** as per **Section 6.6**. All other values can be left as default, scroll down to the end.

The screenshot displays the 'Edit VoiceBoard #1002' configuration page. On the left, a sidebar lists navigation options: Permissions, Scheduling, Tools, Recorder Settings (with sub-links: CTI Cores, Custom Lookup, IP Phones, On Demand, Transcoder, Voice Boards), System Settings, and Web Portal Settings. The main content area is titled 'General Board Settings (Avaya DMCC)' and contains the following fields:

- AES/DMCC Host:** 10.10.40.26
- Secure DMCC Connection:** No (dropdown menu)
- Encrypted RTP Stream:** No (dropdown menu)
- DMCC Port:** 4721
- DMCC Application Name:** DevConnectLab (with a clear 'x' button)
- DMCC User:** incontact
- DMCC Password:** (masked with dots)
- DMCC Protocol Version:** 4.0 (dropdown menu)
- DMCC Protocol Session Cleanup Delay:** 5
- DMCC Protocol Session Duration:** 180

Scroll down to PBX Addresses and enter the IP Address for Communication Manager in the **Avaya Call Manager Host** field. The **DMCC Station Endpoint Host** will be the IP address of the inContact server, which in this case will be the localhost. The value for the **RTP Listening Interface (NIC)** can be obtained from either Wireshark or from the program cc_interfaceBrowser.exe as shown in **Appendix A**.

The image shows a configuration window for DMCC (Digital Media Control Center) with the following fields and values:

- DMCC Protocol Session Duration:** 180
- Avaya Call Manager Host:** 10.10.40.13
- DMCC Station Endpoint Host:** 10.10.40.51
- DMCC Codec:** G.711 - A-Law (selected from a dropdown menu)
- RTP Listening Interface (NIC):** 63B080F0-7951-4694-8B08-5035777FB1F7
- DMCC Station Endpoint Initial Port:** 7000
- Temp Recording Location:** c:\default_rec
- Use Voice Board Reloading:** No (selected from a dropdown menu)

Below the main configuration fields is a section titled **UNC Paths** with an **Add** button. Under this section, there are two tabs: **Local** and **Remote**.

Enter the **Number of Channels to Add**, this will determine the number of devices that are to be monitored. For compliance testing **10** was chosen and each channel was associated with a different Communication Manager extension, ranging from **7000** to **7102**. The **Passwords** for the stations are entered here; this password can be found as per **Section 5.5**.

Channels

Number of Channels to Add: ×
 Add

Scroll back up to the top again and click on **Save**, as highlighted below.

The screenshot shows the inContact Administration interface. The top navigation bar includes 'Home', 'Interactions List', 'Coaching', 'Reporting', 'Surveys', and 'Administration'. The 'Administration' tab is selected. On the left, there is a sidebar with 'Permissions', 'Scheduling', 'Tools', and 'Recorder Settings'. The 'Recorder Settings' section is expanded, showing 'CTI Cores', 'Custom Lookup', 'IP Phones', 'On Demand', 'Transcoder', and 'Voice Boards'. The main content area is titled 'Edit VoiceBoard #1002' and contains 'General Board Settings (Avaya DMCC)'. The settings include: AES/DMCC Host (10.10.40.26), Secure DMCC Connection (No), Encrypted RTP Stream (No), DMCC Port (4721), DMCC Application Name (DevConnectLab), DMCC User (incontact), and DMCC Password (masked). The 'Save' button is highlighted with a red box.

7.2. Create Schedule

Remain under the **Administration** tab and select **Scheduling** → **Create Schedule** in the left window. Click on **Create a Custom Schedule (Advanced)** in the main window.

The screenshot shows the Discover Administration interface. The top navigation bar includes 'Home', 'Interactions List', 'Coaching', 'Reporting', 'Surveys', and 'Administration'. The 'Administration' tab is selected. On the left, there is a sidebar with 'Permissions', 'Scheduling', and 'Create Schedule'. The 'Scheduling' section is expanded, showing 'Create Schedule', 'Timed Schedules', and 'Find Schedule'. The main content area is titled 'Schedule Wizard' and contains a list of three options: '1 Record All Calls For An Agent During A Time Range', '2 Create A Custom Schedule (Advanced)', and '3 Record The Next N Calls For An Agent'. The 'Create A Custom Schedule (Advanced)' option is highlighted with a red box.

Enter a suitable name for the schedule, for compliance testing the following were set,

- **Type** Set to **Percentage**
- **Target Percent** Set to **100**
- **Direction** Set to **both**
- **Schedule Requirements** **Voice Port Not Equal To 0**

The other values can be left as default. Click on **Save Schedule** to save this.

1	Voice Port	Not Equal To	0	<input type="checkbox"/>
2				<input type="checkbox"/>

7.3. Create Core

Remain under the **Administration** tab and select **Recorder Settings** → **CTI Cores** in the left window. Click on **Add Core** at the top right of the main window.

Enter a suitable **Name**. The **Host** must be set to that of the inContact Call Recording server, in the case below this was the localhost or IP address for the localhost. The **Record Method** should be set to **Passive** and the **Enable Event interface** should be set to **Yes**. All other fields can be left as default. Scroll down to the bottom of the page.

Select the **Related Boards** and the **Related Schedules** as shown below by clicking on the add icon.

With the Board and Schedule selected click on the drop down menu highlighted and select **Avaya DMCC**, with this selected click on **Add CTI Module**.

From the drop down menu select **Avaya TSAPI** and click on **Add CTI Module**.

#	Name
1006	cc_AvayaDMCC

Each new CTI Module needs to be edited, click on the edit icon as shown below and edit each CTI core starting with **cc_AvayaDMCC** as shown below.

#	Name
1006	cc_AvayaDMCC
1007	cc_AvayaTSAPIFx

Generate Phone Events should be set to **Yes** as shown below, click on **Save** to get back to the Core screen above.

Avaya DMCC :: Settings

Service Observe Code :

Dial Digit Delay : 100 (ms)

Dial Service Observe by Alias : No

Register DMCC Monitors : No

Generate Phone Events : Yes

Back Save

Edit the **cc_AvayaTSAPIFx** module as shown below.

#	Name
1006	cc_AvayaDMCC
1007	cc_AvayaTSAPIFx

Enter the TLINK information (found from **Section 6.4**) into the **Server Name** box. Enter the CTI user and password as per **Section 6.6** for the **Server Username** and **Server Password**. The other information can be left as default. Scroll down to **Monitors**, each device that needs to be monitored can be added here, as shown below these are Communication Manager extensions ranging from **7000** to **7050**.

Server Name : AVAYA#CM70VMPG#CSTA#AES70VMPG
Server Username : incontact

Scroll up to the top of the page and click on **Save**.

The screenshot displays the inContact WFO Administration interface. The top navigation bar includes links for Home, Interactions List, Coaching, Reporting, Surveys, and Administration. The Administration tab is active, and the user is logged in as a superuser. The left sidebar contains a menu with Permissions, Users, Groups, Roles, Scheduling, Tools, Recorder Settings, and System Settings. The main content area is titled 'Avaya TSAPI :: Settings' and contains a form with the following fields:

- Server Name: AVAYA#CM70VMPG#CSTA#AES70VMPG
- Server Username: incontact
- Server Password: [Redacted]
- Register Monitor Delay: 10
- Number of AES Connection Attempts: 0
- Private Data Type: ECS#2-7
- TS Version: TS1-2
- Query Info On Establish: No
- Register DMCC by Agent Login: No
- Use Dynamic Monitors: No
- Monitor Devices by Group: No

Below these fields is a section for 'Monitors' with the following fields:

- Monitor Type: Device
- Monitor Values: [Redacted]
- Prefix: [Redacted]

The 'Save' button is highlighted with a red border.

8. Verification Steps

This section provides the steps that can be taken to verify correct configuration of the inContact Call Recording and Avaya Aura® Application Enablement Services.

8.1. Verify Avaya Aura® Communication Manager CTI Service State

Before checking the connection between the inContact Call Recording and AES, check the connection between Communication Manager and AES to ensure it is functioning correctly. Check the AESVCS link status by using the command **status aesvcs cti-link**. Verify the **Service State** of the CTI link is **established**.

status aesvcs cti-link							
AE SERVICES CTI LINK STATUS							
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd	
1	5	no	aes70vmppg	established	18	18	

8.2. Verify TSAPI Link

On the AES Management Console verify the status of the TSAPI link by selecting **Status** → **Status and Control** → **TSAPI Service Summary** to display the **TSAPI Link Details** screen. Verify the status of the TSAPI link by checking that the **Status** is **Talking** and the **State** is **Online**.

8.3. Verify DMCC link on AES

Verify the status of the DMCC link by selecting **Status → Status and Control → DMCC Service Summary** to display the **DMCC Service Summary – Session Summary** screen. The screen below shows that the user **inContact** is connected from the IP address **10.10.40.51** which is the inContact Call Recording server.

8.4. Verify inContact Call Recording

From any PC that has a sound card and speakers, open a browser session and browse to the IP address of the inContact Call Recording server, enter the proper credentials and click on **LOGIN**.

Select the **Interactions List** tab and within that tab select the **Call List** tab. Select the required date from the **Calendar** as shown below and this will display all the call recordings that were recorded on that particular date. Selecting any of the play icons highlighted will play back that particular recording.

Record ID	First Name	Last Name	Voice Port	Time Recorded	Duration	Video	Evaluations Completed	QA Score
134			5221	11/10/2015 3:48:57 PM	00:00:11		0	-

8.5. Verify inContact Services

If these recordings are not present or cannot be played back, the **CallCopy CTICore** service may not be running or may need to be restarted. The inContact Call Recording server can be logged into and checked to ensure that the **CallCopy CTICore** service is running.

There may be a number of **CallCopy CTICore** services running depending on the number of connections to the PBX that are in place.

The screenshot shows the Windows Services console for 'Services (Local)'. The 'CallCopy CTICore1003 4' service is highlighted in blue. The service is running and has an automatic startup type. The description on the left states: 'Handles mutiple CTI components, and communication methods.'

9. Conclusion

These Application Notes describe the configuration steps required for inContact Call Recording from inContact to successfully interoperate with Avaya Aura® Communication Manager R7.0 using Avaya Aura® Application Enablement Services R7.0 to connect to using DMCC Multi-Registration to record calls. All feature functionality and serviceability test cases were completed successfully with some issues and observations noted in **Section 2.2**.

10. Additional References

This section references the Avaya and inContact product documentation that are relevant to these Application Notes. Product documentation for Avaya products may be found at <http://support.avaya.com>.

Appendix A

Open the application called **cc_interfaceBrowser.exe**, this should be located in **Program Files** → **CallCopy** → **Recorder** folder.

Select the correct Network Interface which is used to capture the RTP from the data switch. The **Listening Interface** should then be populated and this is used for the setup of the inContact Call Recording server in **Section 7**.
