

Avaya Solution & Interoperability Test Lab

Application Notes for a Telecommuter Mode on Amcom PhoneServer with Avaya Aura™ Communication Manager and Avaya Aura™ Application Enablement Services - Issue 1.0

Abstract

These Application Notes describe a compliance-tested configuration comprised of Avaya Aura™ Communication Manager, Avaya Aura™ Application Enablement Services, Avaya IP and Digital Telephones, and Amcom PhoneServer desktop application.

This is a re-test for a telecommuter Mode on Amcom PhoneServer with Avaya Aura™ Communication Manager and Avaya Aura™ Application Enablement Services.

Amcom PhoneServer allows a user to operate a physical telephone and view call and telephone display information through a graphical user interface (GUI). Amcom PhoneServer integrates with Amcom CTI Layer, which is a middleware between Amcom PhoneServer and Avaya Aura™ Application Enablement Services, to control and monitor phone states. During compliance testing, calls were successfully placed to and from Avaya IP and Digital Telephones that were controlled and monitored by Amcom PhoneServer.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe a compliance-tested configuration, which is the telecommuter mode using Amcom PhoneServer, with Avaya Aura™ Communication Manager, Avaya Aura™ Application Enablement Services, Avaya IP and Digital Telephones.

Amcom PhoneServer allows a user to operate a physical telephone and view call and telephone display information through a graphical user interface (GUI). Amcom PhoneServer integrates with Amcom CTI Layer, which is a middleware between Amcom PhoneServer and Application Enablement Services, to control and monitor phone states.

It is the Amcom CTI Layer service that actually uses the Application Enablement Services Device and Media Control Application Programming Interface (API) to share control of and monitor a physical telephone and receive the same terminal and first party call information received by the physical telephone. Amcom PhoneServer in turn uses the Amcom CTI Layer service to control and monitor a physical telephone. The PhoneServer applications regularly provide the Database server with call and lamp state information concerning the controlled telephones.

1.1. Interoperability Compliance Testing

In these Application Notes, only the telecommuter mode will be discussed. Refer [3] for normal CTI configuration.

1.2. Support

Technical support for the Amcom PhoneServer solution can be obtained by contacting Amcom:

- URL – <http://www.amcomsoftware.com>
- Phone – (888) 797-7487

2. Reference Configuration

Figure 1 illustrates the configuration used in these Application Notes. The sample configuration shows an enterprise with an Application Enablement Services server and Avaya S8300D Media Server with G450 Media Gateway. The PhoneServer was located in a different VLAN. Endpoints include Avaya 9600 Series H.323 IP Telephones. Avaya S8720 Servers with an Avaya G650 Media Gateway was included in the test to provide an inter-switch scenario.

Note: Basic administration of Application Enablement Services server is assumed. For details, see [2].

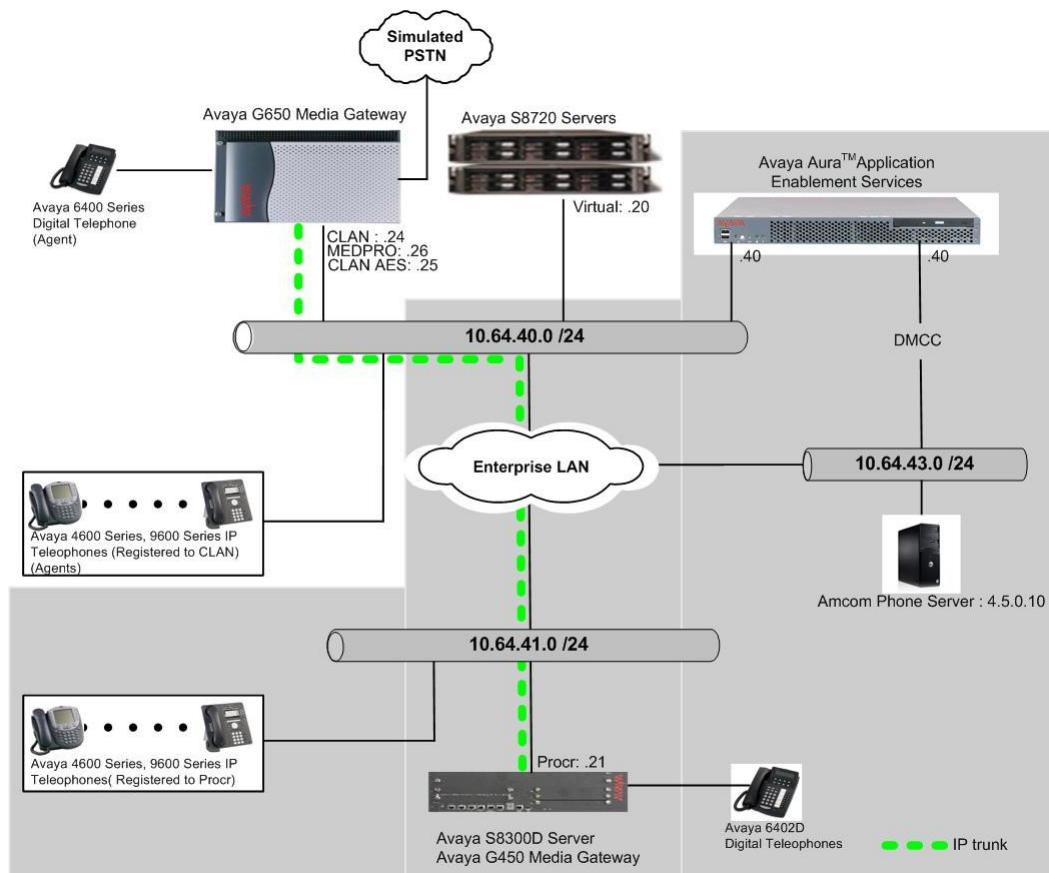

Figure 1: Amcom PhoneServer Test Configuration.

3. Equipment and Software Validated

The following equipment and software/firmware were used for the sample configuration provided:

Equipment	Software/Firmware
Avaya S8300 Media Server with Avaya G450 Media Gateway	Avaya Aura™ Communication Manager 6.0 (R016x.00.0.345.0) with Patch 00.0345.0-18246
Avaya Aura™ Application Enablement Services Server	5.2.2 (r5-2-2-105-0)
Avaya S8720 Media Servers / Avaya G650 Media Gateway	Avaya Aura™ Communication Manager 5.2.1 (R015x.02.1.016.4)
Avaya 4625SW IP Telephone	2.5
Avaya 9600 Series IP Telephones	
9620 (H.323)	3.1
9630 (H.323)	3.1
9650 (H.323)	3.1
Avaya 6424D+ Digital Telephone	-
Avaya 2420 Digital Telephone	-
Amcom PhoneServer	4.5.0.10

4. Configure Avaya Communication Manager

This section only describes procedures for setting up a telecommuter mode for Amcom PhoneServer. Refer [3] for configuring Communication Manager for the normal CTI configuration.

4.1. Configure Switch Hook Query Response Timeout

Enter the **change system-parameters features** command, and change the setting on the Switch Hook Query Response Timeout field under the Redirection on IP Connectivity Failure section, to **NULL**. The default value was set to 500.

```
change system-parameters features                                     Page 14 of 19
                                FEATURE-RELATED SYSTEM PARAMETERS
REASON CODES
                                Aux Work Reason Code Type: none
                                Logout Reason Code Type: none
                                Two-Digit Aux Work Reason Codes? n
REDIRECTION ON IP CONNECTIVITY FAILURE
                                Switch Hook Query Response Timeout:
                                IP Failure Aux Work Reason Code: 0
MAXIMUM AGENT OCCUPANCY PARAMETERS
                                Maximum Agent Occupancy Percentage: 100
                                Maximum Agent Occupancy Aux Work Reason Code: 9
```

4.2. Configure Controlled Telephones

Enter the **change station r** command, where **r** is the extension of a registered, physical Avaya IP or Digital telephone. On **Page 1** of the **station** form, enter a phone Type, descriptive name, Security Code and set IP SoftPhone field to **y** to allow the physical station to be controlled by a softphone such as the PhoneServer application. The following screen shows a sample configuration of Avaya IP 9630 type station.

```
add station 72001                                                  Page 1 of 5
                                STATION

                                Display Language: english           Expansion Module? n
                                Survivable COR: internal            Media Complex Ext:
                                Survivable Trunk Dest? y            IP SoftPhone? y
                                Remote Office Phone? n
                                IP Video Softphone? n
                                Short/Prefixed Registration Allowed: default
                                Customizable Labels? y
```

On **Page 4 and 5** of the station form, enter the following **BUTTON ASSIGNMENTS** in addition to the call-appr (call appearance) buttons:

- auto-in
- aux-work
- abrv-dial – configure two of these buttons, one for Log In and one for Log Out, along with the Dial Codes from Abbreviated Dialing **List1** for ACD Login and Logout, respectively.
- after-call
- release (On Page 5)

Repeat the instructions provided in this section for each physical station that is to be controlled / monitored by an Amcom PhoneServer.

5. Configure Avaya Application Enablement Services

The Avaya Application Enablement Services server enables Computer Telephony Interface (CTI) applications to control and monitor telephony resources on Communication Manager.

This section assumes that installation and basic administration of the Application Enablement Services server has been performed. Refer [3] for configuring the normal CTI configuration.

The steps in this section describe the configuration of a CTI user. Navigate to **User Management → User Admin → Add User** link from the left pane of the window. On the Add User page, provide the following information:

- User Id
- Common Name
- Surname
- User Password
- Confirm Password

The above information (User ID and User Password) must match with the information configured in the CTI Layer Configuration page in **Section 6**.

Select **Yes** using the drop down menu on the CT User field. This enables the user as a CTI user. Default values may be used in the remaining fields. Click the **Apply** button (not shown) at the bottom of the screen to complete the process.

The screenshot displays the Avaya Application Enablement Services Management Console. The top header includes the Avaya logo, the title 'Application Enablement Services Management Console', and a welcome message for 'User craft' with login details. A red navigation bar contains 'User Management | User Admin | Add User' and links for 'Home | Help | Logout'. The left sidebar shows a tree view with 'User Management' expanded and 'Add User' selected. The main content area is the 'Add User' form, which includes fields for User Id, Common Name, Surname, User Password, and Confirm Password (all marked with an asterisk). Other fields include Admin Note, Avaya Role (set to None), Business Category, Car License, CM Home, Cms Home, CT User (set to Yes), Department Number, Display Name, and Employee Number. Red boxes highlight the required fields and the CT User dropdown.

Add User	
Fields marked with * can not be empty.	
* User Id	Amcom
* Common Name	Amcom
* Surname	Amcom123&
* User Password	••••••••
* Confirm Password	••••••••
Admin Note	
Avaya Role	None
Business Category	
Car License	
CM Home	
Cms Home	
CT User	Yes
Department Number	
Display Name	
Employee Number	

Once the user is created, navigate to the **Security** → **Security Database** → **CTI Users** → **List All Users** link from the left pane of the window. Select the User ID created previously, and click the **Edit** button to set the permission of the user.

6. Configure Amcom PhoneServer

Amcom installs, configures, and customizes the PhoneServer application for their end customers. The following screen shows the Amcom PhoneServer's initial setup page that is configured to interface with Application Enablement Services.

Provide the following information:

Under DMCC Settings section

- AES server – Enter the IP address of the AES server.
- Switch IP address – Enter the procr IP address.
- User (default =cmapi) – Enter the user created in **Section 5**.
- Password – Enter the password created in **Section 5**.
- AES Version – Select **5.2** using the drop-down menu.
- Media Mode – Select **Telecommuter** using the drop-down menu.
- Telecommuter Extension – Enter the telecommuter extension.

Under the Phone Device Settings section

- Extension – Enter the physical controlled station, created in **Section 4.2**.
- Security Code – Enter the security code, created in **Section 4.2**.

Click on the **OK** button.

Amcom AES CTI Service Setup

7. General Test Approach and Test Results

The general approach was to exercise the telecommuter mode on Amcom PhoneServer using Communication and Application Enablement Services. The main objectives were to verify that:

- Inbound calls to the telecommuter station.
- Outbound calls from the telecommuter station.
- Hold/unHold on the telecommuter station using Amcom PhoneServer.
- Transfer (blind) calls on the telecommuter station using Amcom PhoneServer.
- Transfer (consult) calls on the telecommuter station using Amcom PhoneServer.
- Conference (blind) calls on the telecommuter station using Amcom PhoneServer.
- Conference (consult) calls on the telecommuter station using Amcom PhoneServer.
- Phone state on Amcom PhoneServer: Idle, ringing and answered state.
- Agent state on the telecommuter station: log In, Log out, Aux Work, Auto-In.
- Agent state on Amcom PhoneServer: Idle, ringing and answered state.

The objectives of **Section 7** were verified.

8. Verification Steps

The following steps may be used to verify the configuration:

- From the Amcom client computers, ping IP interfaces, in particular the Application Enablement Services server, and verify connectivity.
- For the physical IP telephones, verify that the physical telephones are registered by using the **list registered-ip-stations** command on the SAT. For the physical Digital telephones, verify that the telephones are attached to the correct ports.
- Go off-hook and on-hook on the controlled telephones manually and using PhoneServer, and verify consistency.
- Place and answer calls from the controlled telephones manually and using PhoneServer, and verify consistency.

9. Conclusion

These Application Notes described a compliance-tested configuration comprised of Communication Manager, Application Enablement Services, Avaya IP and Digital Telephones, and the Amcom PhoneServer application. The telecommuter mode using Amcom PhoneServer was compliance tested and successfully verified.
