

Avaya Solution & Interoperability Test Lab

Application Notes for WEBTEXT Contact Center Messaging (CCM) with Avaya Aura® Call Center Elite Multichannel - Issue 1.0

Abstract

These Application Notes describe the configuration steps required for WEBTEXT Contact Center Messaging (CCM) V1.0 to interoperate with Avaya Aura® Call Center Elite Multichannel R6.6.2 and Avaya Aura® Communication Manager R8.1. WEBTEXT gives customers the option to use SMS messaging in support of voice.

Readers should pay attention to Section 2, in particular the scope of testing as outlined in Section 2.1 as well as the observations noted in Section 2.2, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration steps required for WEBTEXT Contact Center Messaging (CCM) V1.0 to interoperate with Avaya Aura® Call Center Elite Multichannel R6.2.2 and Avaya Aura® Communication Manager R8.1. WEBTEXT gives customers the option to use SMS messaging in support of voice calls, or perhaps to converse fully using the SMS gateway.

WEBTEXT Contact Center Messaging (CCM) integrates with the existing SMS gateway service on Avaya Aura® Call Center Elite Multichannel. This gateway allows the passing of SMS messages to and from the Avaya Aura® Call Center Elite Multichannel Agent Desktop.

The Avaya Aura® Call Center Elite Multichannel Agent Desktop is configured to allow the addition of a "button" on the agent desktop which can pop a screen to the WEBTEXT cloud service allowing the agent to enter a message and send it to a mobile telephone number. In addition to the button, the agent desktop is also configured to provide a "screen pop" when there is an incoming voice call. This screen pop contains the WEBTEXT URL which again allows the agent to enter a message and send to the callers Calling Line ID (CLID), which would be automatically populated.

The integration to Avaya Aura® Call Center Elite Multichannel requires that it be configured to use the SMS Gateway as well as typical voice calls. These Application Notes assume therefore that Avaya Aura® Call Center Elite Multichannel is fully configured and running as a contact center. The configuration of the SMS Gateway is outlined in **Section 6** and the setup of the SMS VDN is described in **Section 5.1.3**.

The configuration required to set up the button on the Avaya Aura® Call Center Elite Multichannel Agent Desktop is outlined in **Section 7.1** and the full .ini file for the Avaya Aura® Call Center Elite Multichannel Agent Desktop can be found in the **Appendix**.

Note: Avaya Aura® Call Center Elite Multichannel may be referred to as EMC or Elite Multichannel throughout the remainder of this document.

Note: Avaya Aura® Call Center Elite Multichannel Agent Desktop may be referred to as Elite Multichannel Desktop or Agent Desktop throughout the remainder of this document.

2. General Test Approach and Test Results

The general test approach focuses on three similar services offered by WEBTEXT Contact Center Messaging (CCM).

- 1. The ability of an Elite Multichannel Agent to initiate an SMS message from the Agent Desktop to any customer.
- 2. The ability to include an SMS message to the customer while on a call to that same customer.
- 3. The ability of the customer to initiate an SMS chat session with an Elite Multichannel Agent.

PG; Reviewed:	Solution & Interoperability Test Lab Application Notes
SPOC 10/8/2021	©2021 Avaya Inc. All Rights Reserved.

Compliance testing involved an SMS message being sent to and/or from the Avaya Aura® Call Center Elite Multichannel Agent Desktop. A screen pop was also initiated with the result of an incoming voice or SMS call giving the EMC agent the ability to use the WEBTEXT Contact Center Messaging (CCM).

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in these DevConnect Application Notes included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with these Application Notes, the interface between the Avaya Aura® Contact Center Elite Multichannel SMS Gateway and WEBTEXT Contact Center Messaging did not include use of any specific encryption features as requested by WEBTEXT.

2.1. Interoperability Compliance Testing

Compliance testing focused on the following.

Avaya Aura® Contact Center Elite Multichannel Agent initiates an SMS message from the Agent Desktop to a customer's mobile phone.

- Agent wants to send a text message to an arbitrary number, such as a notice to a client that their order is ready for collection.
- There is a button in the toolbar to allow the agent to invoke the screen pop, the screen pop calls a URL and opens a webpage within the agent desktop.
- The agent enters the client's mobile number in the 'Number' field.
- The agent enters the required text in the 'Message Text'.
- The agent clicks the 'Send SMS' button.
- The SMS arrives on the customer's mobile phone.

Avaya Aura® Call Center Elite Multichannel Agent includes an SMS message to the customer while on a call to that same customer.

- Agent answers an inbound call.
- The agent wants to send a message to the caller while talking to them, perhaps confirming a delivery address or reference code, so the caller doesn't need to find a pen and write it down.

PG; Reviewed:	Solution & Interoperability Test Lab Application Notes
SPOC 10/8/2021	©2021 Avaya Inc. All Rights Reserved.

- Screen pop appears agent desktop.
- The 'Number' field is auto-populated with the caller id of the voice caller.
- The agent enters the required text and clicks 'Send SMS' as above.
- Message history for this caller appears on the right-hand side of the screen pop.

Customer initiates an SMS chat session with an Avaya Aura® Call Center Elite Multichannel Agent.

- Customer sends an SMS to the enterprise and is received in the agent desktop web chat. Responses from the agent go back as SMS to the customer.
- EMC connects to WEBTEXT SMPP gateway
- Messages to/from web chat are routed through this SMPP connection
- Incoming text message triggers a web chat event, opening web chat tab for agent.
- Agent replies to text messages in the web chat window, messages from the customer also appear in the same window.

2.2. Test Results

All test cases passed with the following observations .

- 1. Certain "complex" characters such as £\$ @"# may appear different on each side of the text depending on the location, and therefore, the keyboard layout of each person.
- 2. There were some minor delays between the sending/receiving of text/SMS between the EMC agent and customer, so at times a conversation between them did not flow smoothly when using SMS as Instant Messaging.

2.3. Support

Support for WEBTEXT Contact Center Messaging (CCM) can be obtained as follows: **WEBSITE**

3. Reference Configuration

The configuration in **Figure 1** was used to compliance test WEBTEXT Contact Center Messaging (CCM) with Avaya Elite Multichannel using a connection from the SMS Gateway to the WEBTEXT Contact Center Messaging.

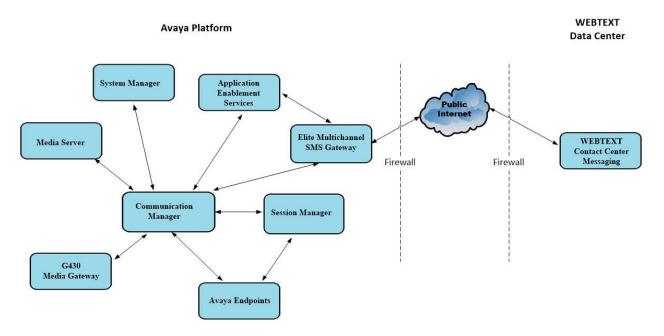

Figure 1: Connection of WEBTEXT Contact Center Messaging (CCM) V1.0 with Avaya Aura® Call Center Elite Multichannel R6.2.2, Avaya Aura® Communication Manager R8.1 and Avaya Aura® Application Enablement Services R8.1

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® System Manager running on a virtual server	8.1.3.1 Build No. – 8.1.0.0.733078 Software Update Revision No: 8.1.3.1.1012493 Service Pack 1
Avaya Aura® Session Manager running on a virtual server	8.1.3.1 Build No. – 8.1.3.1.813113
Avaya Aura® Communication Manager running on a virtual server	8.1.3.1 – FP3SP1 R018x.01.0.890.0 Update ID 01.0.890.0-26766

Avaya Aura® Call Center Elite Multichannel Desktop running on a virtual server	6.6.2
Avaya J179 H.323 Deskphone	6.8304
Avaya J189 SIP Deskphone	4.0.6.1.1
WEBTEXT Contact Center Messaging	1.0

5. Configure Avaya Aura® Communication Manager

The information provided in this section describes the configuration of Communication Manager relevant to this solution. For all other provisioning information, such as initial installation and configuration, please refer to the product documentation in **Section 11**.

Configuration of Communication Manager was performed using the System Access Terminal (SAT). Some screens in this section have been abridged and highlighted for brevity and clarity in presentation. The general installation of the servers and gateways are presumed to have been previously completed and is not discussed here.

5.1. Configure Routing on Avaya Aura® Communication Manager

This section shows the steps required to add a new SMS service or skill on Communication Manager. Services on EMC are accessed by calling a Vector Directory Number (VDN), which points to a hunt group associated with an agent. Queues are created on the EMC; for example, "Sales" or "Email for Support" and each queue is assigned a VDN on Communication Manager. The following sections give step by step instructions on how to add the following:

- Skill/Hunt Group
- Vector
- VDN
- Agent
- Phantom Station

This same procedure is required for every queue that is added on EMC both for voice and multimedia, the following sections will show the required steps to add one VDN for the SMS gateway service on EMC.

5.1.1. Add Hunt Group

To add a new skillset or hunt group, type **add hunt-group x**, where x is the new hunt group number. For example, hunt group **30** is added for the **Sales SMS (EMC)** queue. Ensure that **ACD**, **Queue** and **Vector** are all set to **y**. Also, that **Group Type** is set to **ucd-mia**.

```
add hunt-group 30
                                                         Page
                                                               1 of
                                                                      4
                               HUNT GROUP
                                                       ACD? y
          Group Number: 30
           Group Name: Sales SMS (EMC)
                                                     Queue? y
        Group Extension: 6930
                                                    Vector? y
            Group Type: ucd-mia
                    TN: 1

5.1.2. Display Vector

The Vector below is already created and is in place and running. This Vector ensures that the call is routed to the 1st skill outlined on each VDN created. The example below shows the call queuing to the 1st skill, note that this will be the skill/hunt added to the 1st skill on the VDN configured in **Section 5.1.3**.

07				
08				
09				
10				

5.1.3. Add VDN

A VDN is added to route calls to the SMS Gateway. To add a VDN, type **add vdn x**, where x is your VDN number. Enter a suitable name; for example, **VDN 7930** below will be used exclusively for the **Sales SMS (EMC)** queue on EMC. The same number can be used for the Extension and the Vector number should point to the Vector displayed in **Section 5.1.2**. The **1st Skill** will be that of the Hunt Group created in **Section 5.1.1**.

```
add vdn 7930
                                                              Page 1 of
                                                                            3
                            VECTOR DIRECTORY NUMBER
                             Extension: 7930
                                 Name*: Sales SMS (EMC)
                                                              77
                           Destination: Vector Number
                   Attendant Vectoring? n
                  Meet-me Conferencing? n
                    Allow VDN Override? n
                                   COR: 1
                                   TN*: 1
                              Measured: none
       VDN of Origin Annc. Extension*:
                            1st Skill*: 30
                            2nd Skill*:
                            3rd Skill*:
* Follows VDN Override Rules
```

5.1.4. Change Agent

An existing agent will need to be amended to answer calls for this new SMS service. To make changes to an existing agent, type **change agent-loginID** \mathbf{x} , where x is the login id for the new agent.

```
change agent-loginID 1401
                                                              Page
                                                                     1 of
                                                                            3
                                AGENT LOGINID
               Login ID: 1401
                                                                AAS? n
                   Name: Russell
                                                              AUDIX? n

6. Configure Avaya Aura® Call Center Elite Multichannel

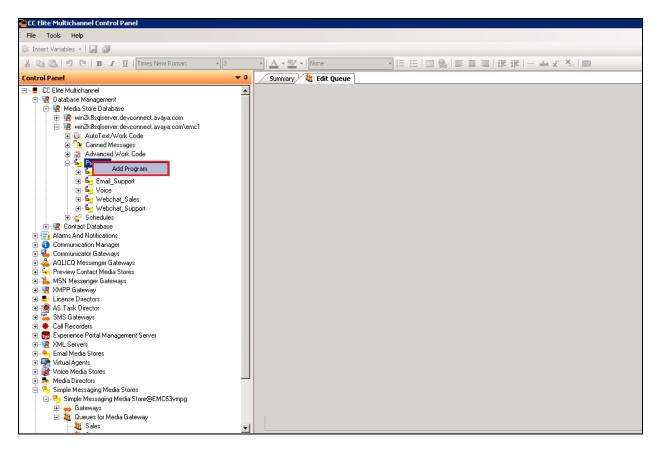

Elite Multichannel is configured using the **Avaya Aura® Call Center Elite Multichannel Control Panel**. Changes are required on Elite Multichannel to add the SMS Queue and ensure that the SMS Gateway is configured correctly. Open **Control Panel** to make changes to EMC.

Note: The EMC Server in this example is called **EMC63vmpg** and this will be visible throughout the screen shots that will follow. However, this will be referred to as "EMC Server" as this will be different for every site.

6.1. Create the SMS Program

Changes are made to the various components in the left navigation window. Navigate to **Database Management** \rightarrow **<SQL Server>** \rightarrow **Programs**. Right-click on **Programs** and select **Add Program**.

- Enter a suitable **Name**.
- In the **Program Configuration** panel, select **MyText** from the dropdown as the **AutoText list name**. Define **Public** as the **Program access mode**. Select **CannedMessagesGroup** as the **CannedMessage list name**.
- Tick Automatically Drop Phantom Call.
- Leave the other configuration items with their default values.
- Confirm selections and save and close the program window.

7. Configure Avaya Aura® Call Center Elite Multichannel Desktop

This section outlines the steps required to configure the agent desktop to allow both a screen pop on an incoming call and the addition of a button to initiate the screen pop. Changes to the EMC desktop can be made using a Configuration Manager loaded with the EMC server or by making changes to the ASGUIHost.ini file on the PC running the EMC desktop.

For simplicity this document will show the additions/changes that need to be made to the ASGUIHost.ini file. Navigate to the folder C:\Program Files (x86)\Avaya\Avaya Aura CC Elite MultiChannel\Desktop\CC Elite Multichannel Desktop. Edit the file called ASGUIHost.ini as highlighted below.

Note: The full ASGUIHost.ini file is available to view in the **Appendix** of these Application Notes.

8. Configure WEBTEXT Contact Center Messaging (CCM)

All configurations of WEBTEXT Contact Center Messaging (CCM) are performed by a WEBTEXT engineer and are outside the scope of these Application Notes.

9. Verification Steps

This section provides the verification steps that can be performed to verify that EMC agents have the ability to initiate an SMS message from the Agent Desktop to any customer and have the ability to include an SMS message to the customer while on a call with that customer.

9.1. Verify SMS Gateway is Running on Avaya Aura® Call Center Elite Multichannel

Log into EMC as per Section 6. Click on SMS Gateway in the left window as shown, the Summary in the main window should show the Service status as Running.

9.2. Verify incoming SMS received on Avaya Aura® Call Center Elite Multichannel Desktop

From the Client PC, open the **Avaya Aura® Call Center Elite Multichannel Desktop**. Typically, this is opened from a shortcut located on the PC.

Log in the agent that is associated with the SMS skill/queue. Select **User** from the menu and **Agent Login** as shown below.

From a mobile/cell phone, send an SMS message to the number associated with the WEBTEXT gateway. A phantom call (seen at the bottom right of the screen) should be received at the agent desktop along with the SMS message as shown below. This phantom call reserves the agent and allows the agent to proceed with answering the message.

9.3. Verify SMS Message via Screen Pop to Avaya Aura® Call Center Elite Multichannel Desktop

Make a voice call to the EMC from a mobile phone, note that for compliance testing a simulated PSTN was configured using a Communication Manager, the CLID of the caller was manipulated to resemble that of a WEBTEXT mobile phone. A call is then made to the EMC voice queue, when the call is presented a screen is popped to the agent that resembles that shown below.

	🗣 Agent:0	Voice - [1001 14022057394]

A closer look of the screen shows the **Number** field is already populated with the mobile phone number allowing the agent to enter a **Message Text** and click on the **Send SMS** button. Verify that the message entered then appears on the mobile phone. A custom response can also be sent using the **Choose a Template** drop-down menu.

10. Conclusion

These Application Notes describe the configuration steps required for WEBTEXT Contact Center Messaging (CCM) v1.0 to interoperate with Avaya Aura® Call Center Elite Multichannel R6.2.2 and Avaya Aura® Communication Manager R8.1. WEBTEXT gives customers the option to use SMS messaging in support of voice. All feature and serviceability test cases were completed successfully with observations noted in **Section 2.2**.

11. Additional References

This section references the Avaya and WEBTEXT product documentation that are relevant to these Application Notes.
