

Avaya Solution & Interoperability Test Lab

Application Notes for InfoPlus Session Manager Book with Avaya Aura® Session Manager - Issue 1.0

Abstract

These Application Notes describe how InfoPlus Session Manager Book collects Network Routing Policy (NRP) configuration data from Avaya Aura® Session Manager to generate a detailed report. This report provides both a high-level overview of the SIP network and its components, as well as an understandable explanation of how individual calls are routed. The InfoPlus Session Manager Book is an excellent tool for the day-to-day management and administration of enterprise SIP network routing. InfoPlus Session Manager Book collects configuration data from Avaya Aura® System Manager.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe how InfoPlus Session Manager Book collects Network Routing Policy (NRP) configuration data from Avaya Aura® Session Manager to generate a detailed report. This report provides both a high-level overview of the SIP network and its components, as well as an understandable explanation of how individual calls are routed. The InfoPlus Session Manager Book is an excellent tool for the day-to-day management and administration of enterprise SIP network routing. The InfoPlus Session Manager Book is designed so that even the Non-Technical Manager can understand and identify how SIP sessions are routed through their network. This is a hosted solution with the InfoPlus Session Manager Book server located on InfoPlus premises and the Session Manager Book report generated by InfoPlus Services personnel and delivered to the customer.

The InfoPlus Session Manager Book provides the following three chapters:

- **Chapter 1: SIP Network Information** – There is one section for each of the following NRP programming areas.
 - **Domains** – A reference of the programmed domains.
 - **Locations** – A breakdown of the bandwidth management programming and key Location parameters.
 - **SIP Entities** – A graphical depiction of the Avaya SIP Core Network, in addition to a comprehensive listing of SIP entities, their connections, and key parameters.
 - **Adaptations** – This section reveals the SIP header modifications applied by each Adaptation, processes and evaluates all digit conversion rules, and lists dependent SIP Entities.
 - **Time Ranges** – A graphical depiction of each Time Range programmed.
 - **Routing Policies** – For each Routing Policy, a Time of Day routing cost-based heat map, in addition to a summary of how many Dial Patterns and Regular Expressions are assigned.
- **Chapter 2: SIP Network Routing** – The statistical analysis provided in this chapter enables a high level understanding of how Session Manager will route a given call. The analysis is performed for all Dial Patterns and Regular Expressions and computes their routing destination for each minute of the week. This is then summarized to provide a percentage of the week that any given call will route to any given SIP Entity. This enables verification of routing performance from the simplest to the most complex 'Time of Day'/'Least Cost Routing' implementations.
- **Chapter 3: Action Items** – This chapter identifies Session Manager NRP data that can either cause Session Manager to behave in an unpredictable manner, is inconsistent with other Session Manager programming, or appears to be superfluous with regard to how Session Manager functions.

InfoPlus Session Manager Book collects the configuration data from Avaya Aura® System Manager. There are two methods used by InfoPlus Session Manager Book to capture the NRP data from Avaya Aura® System Manager: *Customer Export* and *Remote Access*.

Using the *Customer Export* method, the customer manually exports the NRP data from Avaya Aura® System Manager and then sends it to InfoPlus. Using the *Remote Access* method, InfoPlus Session Manager Book remotely accesses Avaya Aura® System Manager via VPN, SAL, or another TCP/IP communication method. InfoPlus Session Manager Book then automatically logs into Avaya Aura® System Manager and exports the data exactly as a customer would have done it. For this compliance test, both access methods were exercised. For remote access, InfoPlus Session Manager Book accessed Avaya Aura® System Manager via the Internet.

When the NRP data is exported from Avaya Aura® System Manager, the data is stored in the `NRPEXportData.zip` export file. This compressed file contains nine XML files, each pertaining to a NRP data component. The nine XML files are:

- `<user>Domains.xml` (required)
- `<user>Locations.xml` (required)
- `<user>Adaptations.xml` (optional)
- `<user>SipEntities.xml` (required)
- `<user>EntityLinks.xml` (required)
- `<user>TimeRanges.xml` (required)
- `<user>RoutingPolicies.xml` (required)
- `<user>DialPatterns.xml` (optional)
- `<user>RegularExpressions.xml` (optional)

The InfoPlus Session Manager Book report uses data from each of the nine NRP files exported. Session Manager Book expands the compressed files, validates the files using XSD schema definitions, and then parses the XML to perform data processing and analysis. The data download and processing are performed by two applications: **InfoPlusDownloader** and **InfoPlusProducer** applications.

Note: Since this is a hosted solution provided by InfoPlus for customers with an Avaya SIP network using Avaya Aura® System Manager and Avaya Aura® Session Manager, all of the activities described in these Application Notes are performed by InfoPlus Services personnel with the exception of the customer providing the `NRPEXportData.zip` export file to InfoPlus, if that is the chosen data collection method. The steps in these Application Notes are provided for information purposes.

2. General Test Approach and Test Results

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

The interoperability compliance test included feature testing. The feature testing focused on collecting NRP data from System Manager, validating and processing the data, and generating the Session Manager Book. Two methods were used to collect the data for Session Manager Book: *Customer Export* and *Remote Access*. Since this is a hosted solution provided by InfoPlus, the Session Manager Book server was located on InfoPlus' premises.

2.1. Interoperability Compliance Testing

Interoperability compliance testing covered the following features and functionality:

- Collecting NRP data from System Manager using the *Customer Export* method and importing the data into Session Manager Book.
- Collecting NRP data from System Manager using the *Remote Access* method. To test the remote access method, Session Manager Book accessed System Manager via the Internet. The **InfoPlusDownloader** application was used to collect the data remotely.
- Session Manager Book expanding the compressed files and removing the "user name" prepended to the XML file names by System Manager.
- Session Manager Book performing data integrity check of the `NRPEXportData.zip` export file. Any required XML files that were missing were flagged and processing would be halted.
- Report generation and analysis.
- Checking the accuracy of the Session Manager Book report.

2.2. Test Results

All test cases passed. Session Manager Book collected the NRP data from System Manager, validated and processed the data, and generated the Session Manager Book report.

2.3. Support

For technical support on the InfoPlus Session Manager Book, contact InfoPlus Customer Support via phone, email, or website.

- **Phone:** (201) 746-7200
- **Email:** support@infoplusonline.com
- **Web:** <http://www.infoplusonline.com/index.php/contactus>

3. Reference Configuration

Figure 1 illustrates a sample configuration with an Avaya SIP-based network that includes the following Avaya products:

- Avaya Aura® Communication Manager running on an Avaya S8800 Server with a G650 Media Gateway. Communication Manager was configured as an Evolution Server.
- Avaya Aura® Session Manager connected to Communication Manager via a SIP trunk and acting as a Registrar/Proxy for SIP telephones.
- Avaya Aura® System Manager used to configure Session Manager. InfoPlus Session Manager Book downloads NRP data from System Manager.
- InfoPlus Session Manager Book server and a desktop PC running the InfoPlusDownloader and InfoPlusProducer applications, which are part of the InfoPlus Session Manager Book solution.

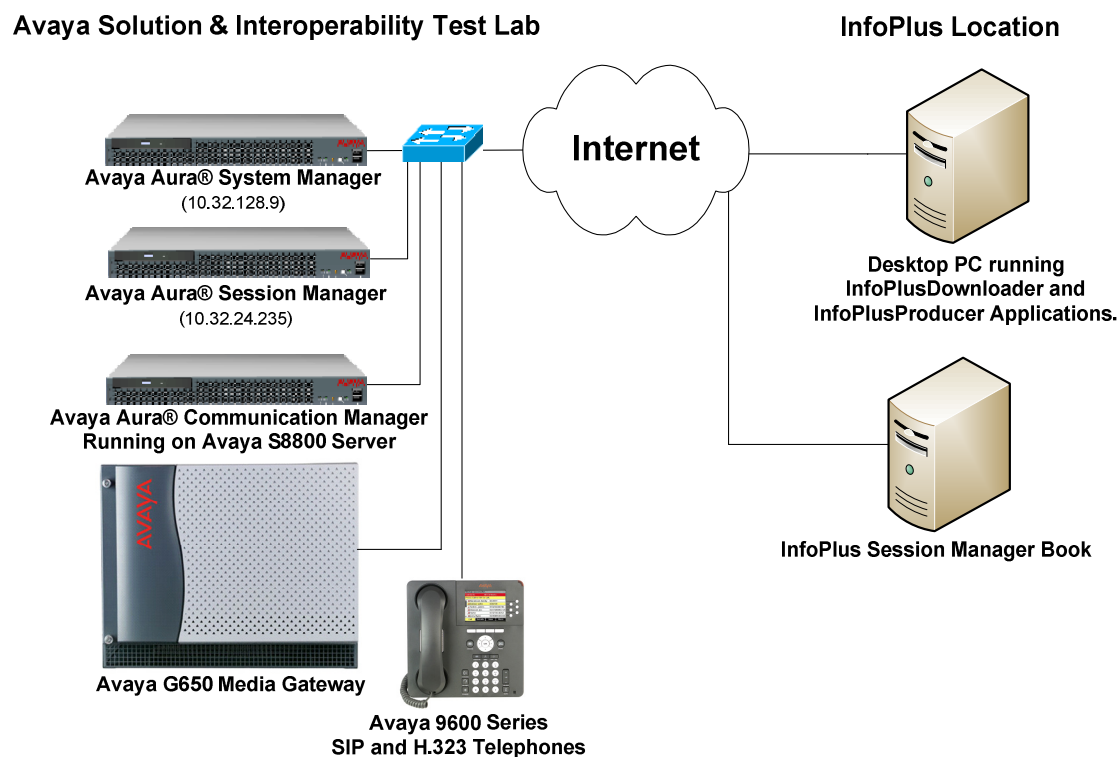

Figure 1: Avaya SIP Network with InfoPlus Session Manager Book – A Hosted Solution

4. Equipment and Software Validated

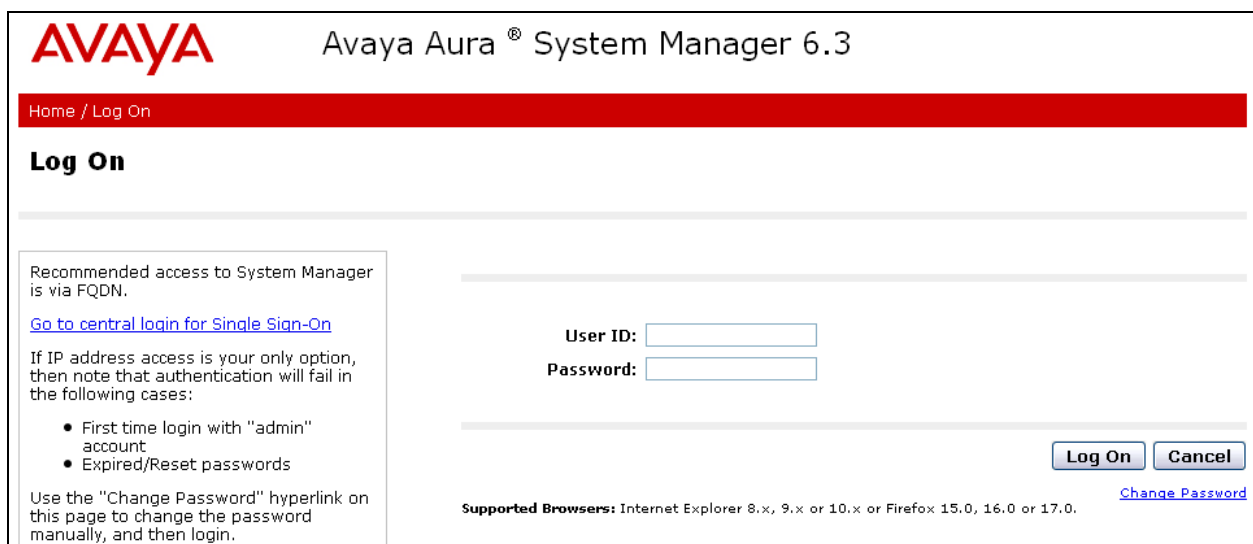

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® Communication Manager running on an Avaya S8800 Server with and G650 Media Gateway	6.3 SP 1 (R016x.03.0.124.0 w/Patch 20850)
Avaya Aura® Session Manager	6.3 SP 3 (6.3.3.0.633004)
Avaya Aura® System Manager	6.3.3 (Build No. – 6.3.0.8.5682-6.3.8.1814, Software Update Revision No: 6.3.3.5.1719)
InfoPlus Session Manager Book	12803

5. Exporting NRP Data from Avaya Aura® System Manager

This section provides the procedure for exporting NRP data from System Manager. The procedure remains the same whether using the *Customer Export* or *Remote Access* methods. The only difference between the two access methods is that with the *Customer Export* method, the customer performs these steps manually, whereas with the *Remote Access* method, InfoPlus Session Manager Book performs these steps automatically using its **InfoPlusDownloader** application.

Access the System Manager Web interface by using the URL “https://ip-address” in an Internet browser window, where “ip-address” is the IP address of the System Manager server. Log in using the appropriate credentials.

The screenshot shows the Avaya Aura System Manager 6.3 login interface. At the top left is the AVAYA logo, and to its right is the text "Avaya Aura® System Manager 6.3". Below this is a red navigation bar with "Home / Log On" in white text. The main heading is "Log On". On the left, there is a box containing instructions: "Recommended access to System Manager is via FQDN." with a link "Go to central login for Single Sign-On". Below that, it says "If IP address access is your only option, then note that authentication will fail in the following cases:" followed by a bulleted list: "• First time login with 'admin' account" and "• Expired/Reset passwords". At the bottom of this box, it says "Use the 'Change Password' hyperlink on this page to change the password manually, and then login." To the right of this box are two input fields: "User ID:" and "Password:". Below these fields are "Log On" and "Cancel" buttons. At the bottom right, there is a "Change Password" link. At the bottom left, it says "Supported Browsers: Internet Explorer 8.x, 9.x or 10.x or Firefox 15.0, 16.0 or 17.0."

From the subsequent screen shown below, navigate to **Elements** → **Routing**.

The screenshot displays the Avaya Aura System Manager 6.3 interface. At the top left is the AVAYA logo. The title bar reads "Avaya Aura® System Manager 6.3". On the top right, it shows "Last Logged on at October 11, 2013 1:58 PM" and links for "Help | About | Change Password | Log off admin".

The main content area is divided into three vertical panels, each with an orange header:

- Users**
 - Administrators**: Manage Administrative Users
 - Directory Synchronization**: Synchronize users with the enterprise directory
 - Groups & Roles**: Manage groups, roles and assign roles to users
 - User Management**: Manage users, shared user resources and provision users
- Elements**
 - Communication Manager**: Manage Communication Manager 5.2 and higher elements
 - Communication Server 1000**: Manage Communication Server 1000 elements
 - Conferencing**: Manage Conferencing Multimedia Server objects
 - IP Office**: Manage IP Office elements
 - Meeting Exchange**: Manage Meeting Exchange and Avaya Aura Conferencing 6.0 elements
 - Messaging**: Manage Avaya Aura Messaging, Communication Manager Messaging, and Modular Messaging
 - Presence**: Presence
 - Routing**: Session Manager Routing Administration
 - Session Manager**: Session Manager Administration, Status, Maintenance and Performance Management
- Services**
 - Backup and Restore**: Backup and restore System Manager database
 - Bulk Import and Export**: Manage Bulk Import and Export of Users, User Global Settings, Roles, Elements and others
 - Configurations**: Manage system wide configurations
 - Events**: Manage alarms, view and harvest logs
 - Geographic Redundancy**: Manage Geographic Redundancy
 - Inventory**: Manage, discover, and navigate to elements
 - Licenses**: View and configure licenses
 - Replication**: Track data replication nodes, repair replication nodes
 - Scheduler**: Schedule, track, cancel, update and delete jobs
 - Security**: Manage Security Certificates
 - Shutdown**: Shutdown System Manager Gracefully
 - Software Management**: Upgrade and Patch Management for Communication Manager devices and IP Office
 - Templates**: Manage Templates for Communication Manager, Messaging System and IP Office elements

Next, navigate to **Routing** → **Domains**.

The screenshot shows the Avaya Aura System Manager 6.3 interface. The top navigation bar includes the Avaya logo, the title 'Avaya Aura® System Manager 6.3', and user information: 'Last Logged on at October 11, 2013 1:58 PM', 'Help | About | Change Password | Log off admin'. The left sidebar contains a 'Routing' menu with sub-items: Domains, Locations, Adaptations, SIP Entities, Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main content area is titled 'Home / Elements / Routing' and displays 'Introduction to Network Routing Policy'. The text explains that Network Routing Policy consists of several routing applications like 'Domains', 'Locations', 'SIP Entities', etc. The recommended order to use the routing applications is as follows:

- Step 1: Create "Domains" of type SIP (other routing applications are referring domains of type SIP).
- Step 2: Create "Locations"
- Step 3: Create "Adaptations"
- Step 4: Create "SIP Entities"

- SIP Entities that are used as "Outbound Proxies" e.g. a certain "Gateway" or "SIP Trunk"
- Create all "other SIP Entities" (Session Manager, CM, SIP/PSTN Gateways, SIP Trunks)
- Assign the appropriate "Locations", "Adaptations" and "Outbound Proxies"

In the **Domains** webpage, click on the **More Actions** button and then select **Export all data** as shown below. Save the `NRPEExportData.zip` file to the desired directory, if manually performing these steps. When InfoPlus Services performs these steps using their **Downloader** application, the file will be saved automatically to the appropriate directory assigned to this host. Once the data has been exported, send the `NRPEExportdata.zip` file to InfoPlus as directed by their services personnel.

The screenshot shows the Avaya Aura System Manager 6.3 interface for 'Domain Management'. The top navigation bar is the same as in the previous screenshot. The left sidebar is also the same. The main content area is titled 'Home / Elements / Routing / Domains' and displays 'Domain Management'. There are buttons for 'New', 'Edit', 'Delete', 'Duplicate', and 'More Actions'. The 'More Actions' dropdown menu is open, showing options: 'Import', 'Export Domains', and 'Export all data'. Below the buttons, there is a table with 5 items. The table has columns for 'Name', 'Type', and 'Notes'. The 'Filter: Enable' button is visible on the right side of the table.

<input type="checkbox"/>	Name	Type	Notes
<input type="checkbox"/>	avaya.com	sip	Enterprise Domain
<input type="checkbox"/>	br110.com	sip	
<input type="checkbox"/>	dev4.com	sip	Infrastructure Lab
<input type="checkbox"/>	devcon.com	sip	
<input type="checkbox"/>	fs.broadvox.net	sip	

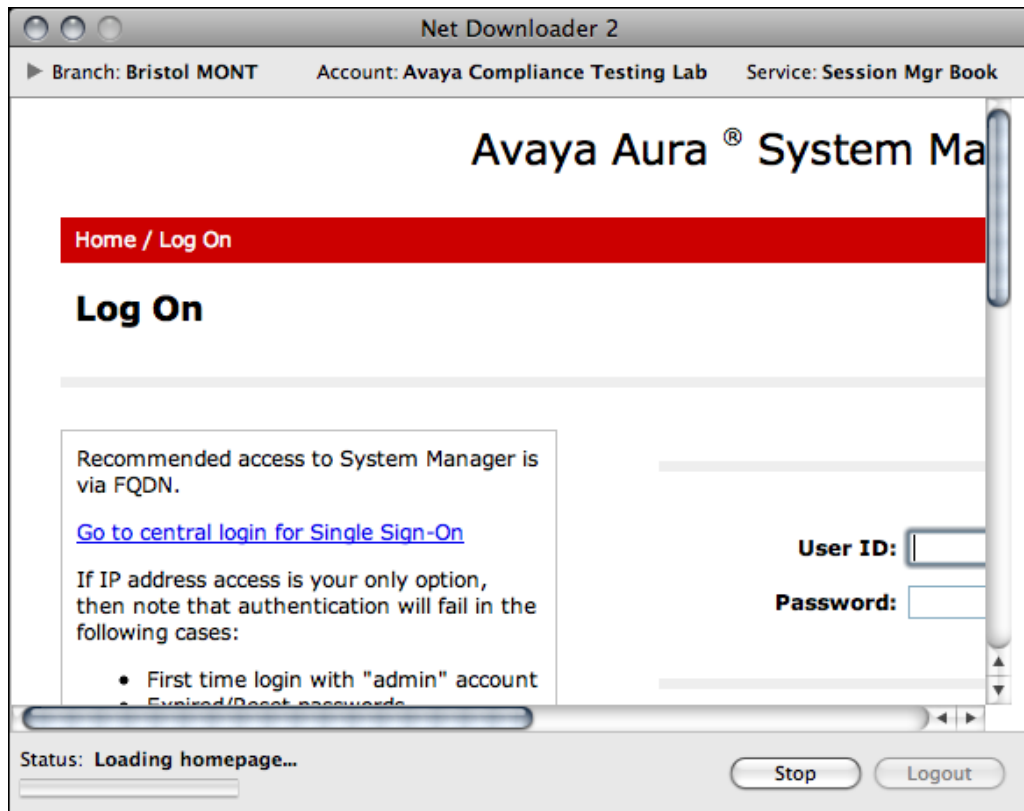

Select : All, None

6. InfoPlus Session Manager Book

InfoPlus Session Manager Book utilizes the **InfoPlusDownloader** and **InfoPlusProducer** applications to download the NRP data, and to process it and generate the report, respectively. The **InfoPlusDownloader** application uses an internal customer management database that contains customer information, including the System Manager IP address, login credentials, and customer email addresses. The **InfoPlusDownloader** application runs in the background and initiates a download per its configured schedule. The **InfoPlusDownloader** window is displayed below.

When the **InfoPlusDownloader** application initiates the NRP data download from System Manager, it connects to System Manager and logs in with the appropriate credentials as shown below. It proceeds to export the data as described in **Section 5**.

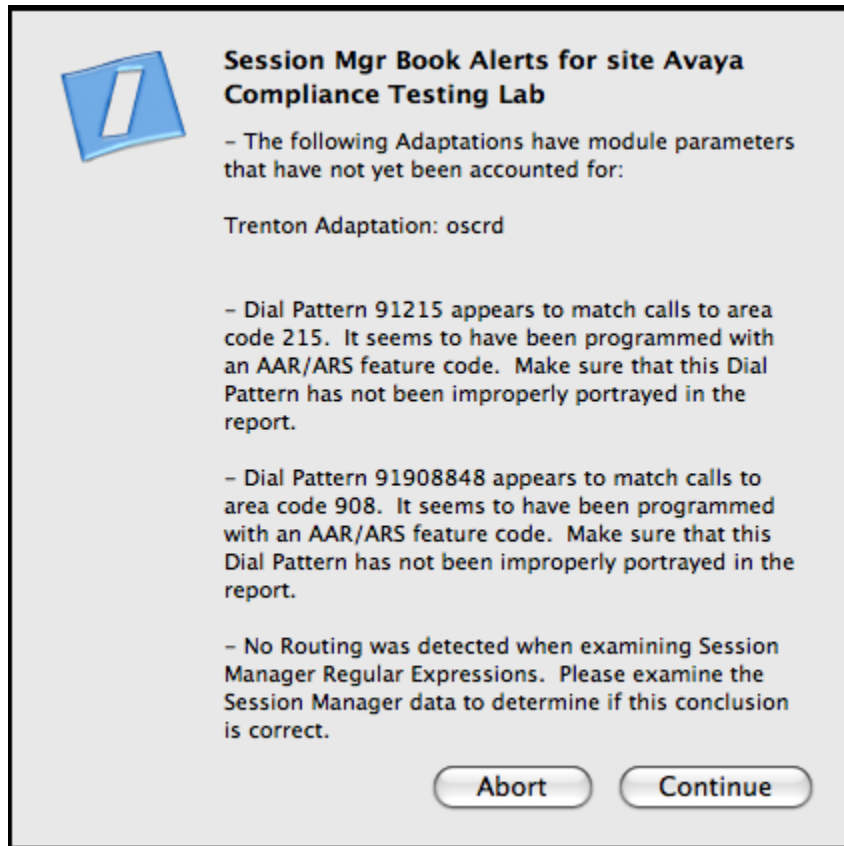

After the `NRPEExportData.zip` file has been downloaded, it is automatically saved to the appropriate directory from where the **InfoPlusProducer** application will access it. **InfoPlusProducer** will then expand the file, parse it, and generate the report. The **InfoPlusProducer** window appears as shown below when it is processing the NRP data.

As InfoPlusProducer is processing data, it will display appropriate alerts as necessary. InfoPlus Services personnel then have the option to proceed or halt the process. Below is an example where an alert is displayed because an optional file is missing. In this case, there are no Regular Expressions configured so the process is allowed to continue.

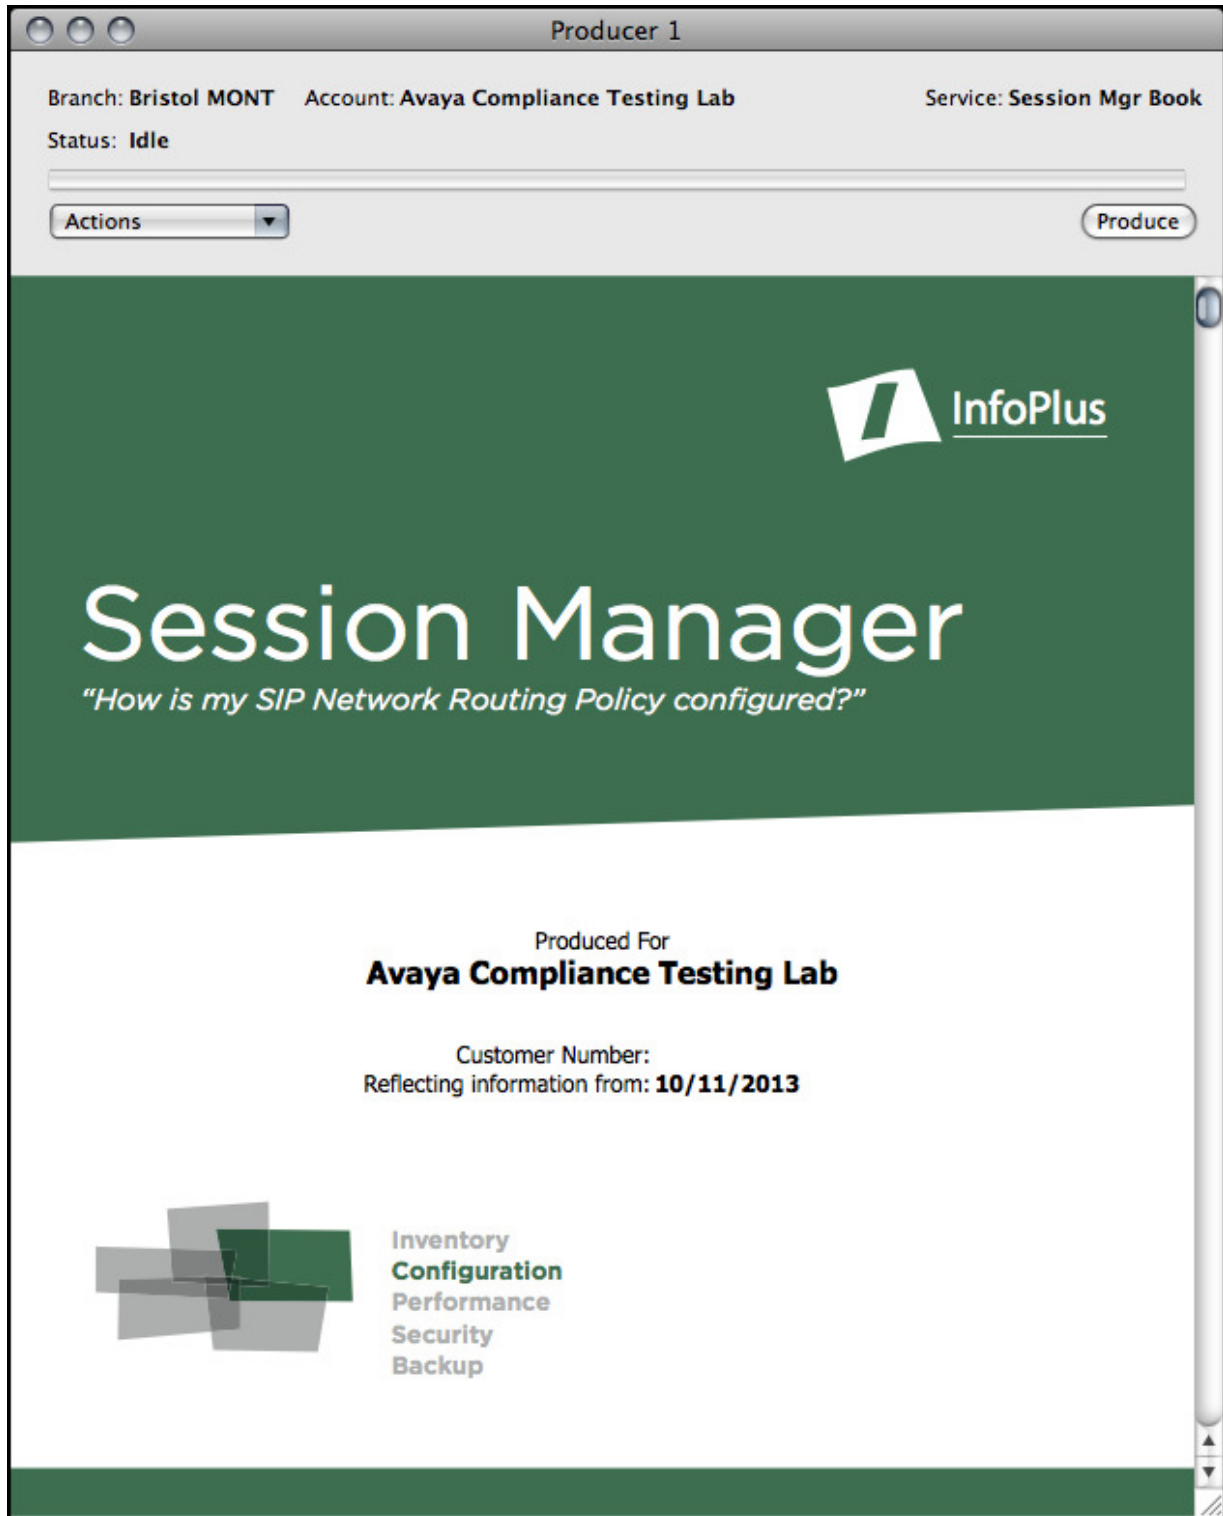

The following example, provides an alert because one of the Adaptations is misconfigured (i.e., the Adaptation is using an unknown parameter). Again, the process is allowed to continue.

When the data has been processed, **InfoPlusProducer** starts to generate the Session Manager Book, which is a PDF file.

When the Session Manager Book has been created, the **InfoPlusProducer** appears as shown below. It then proceeds to send an email to the customer contact with a link to the report. This completes the process. To view a Session Manager Book sample, refer to [3].

7. Verification Steps

This section provides the steps that can be performed to verify that InfoPlus Session Manager Book can remotely access Avaya Aura® System Manager to collect NRP data.

1. InfoPlus Services personnel may use the InfoPlusDownloader application to connect to the customer's System Manager using the information in their customer management database. If appropriate, the download can also be performed manually by the customer using the procedure described **Section 5**.
2. When the NRP data has been downloaded, it should be expanded and checked for the appropriate files.
3. Once the data has been validated, InfoPlus can proceed to process the data and generate the Session Manager Book.

8. Conclusion

These Application Notes describe how InfoPlus Session Manager Book collects Network Routing Policy (NRP) configuration data from Avaya Aura® Session Manager to generate a detailed report. InfoPlus Session Manager Book successfully downloaded the Network Routing Policy data from Avaya Aura® System Manager and generated the Session Manager Book report. All test cases passed.
