

**Application Notes for Resource Software International  
Revolution Web Call Accounting with Avaya IP Office  
– Issue 1.0**

**Abstract**

These Application Notes describe the configuration steps required for Resource Software International Revolution Web Call Accounting to interoperate with Avaya IP Office. Resource Software International Revolution Web Call Accounting is a browser-based call accounting solution that uses the Station Message Detail Recording records from Avaya IP Office to track phone calls and produce detailed reports.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

# 1. Introduction

These Application Notes describe the configuration steps required for Resource Software International (RSI) Revolution Web Call Accounting to interoperate with Avaya IP Office. RSI Revolution Web Call Accounting is a browser-based call accounting solution that uses the Station Message Detail Recording (SMDR) records from Avaya IP Office to track phone calls and produce detailed reports.

## 1.1. Interoperability Compliance Testing

The interoperability compliance test included feature and serviceability testing.

The feature testing focused on verifying the proper parsing and displaying of SMDR data received from Avaya IP Office by RSI Revolution Web Call Accounting for call scenarios including internal, voicemail, inbound PSTN, outbound PSTN, transfer, conference, account codes, and authorization codes. The verification also included a sanity check on the report that can be generated from the received SMDR data.

The serviceability testing focused on verifying the ability of RSI Revolution Web Call Accounting to recover from adverse conditions, such as disconnecting/reconnecting the Ethernet cable on the RSI Revolution Web Call Accounting server.

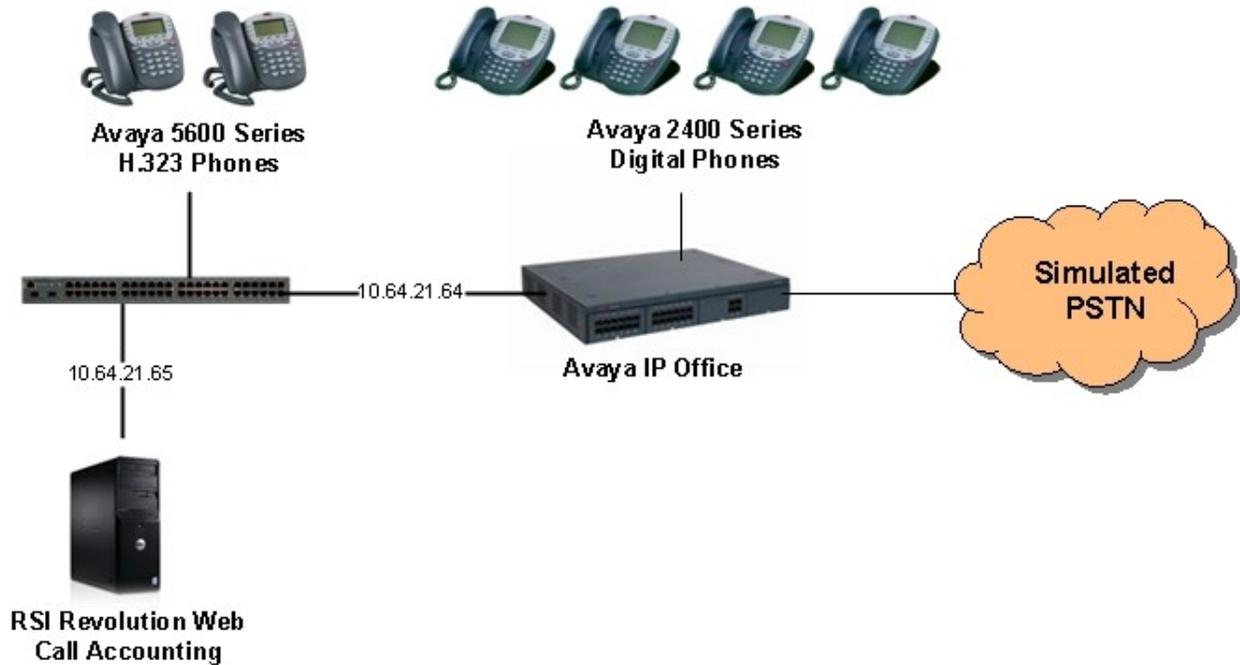

## 1.2. Support

Technical support on RSI Revolution Web Call Accounting can be obtained through the following:

- **Phone:** 905-576-4575
- **Email:** [support@telecost.com](mailto:support@telecost.com)
- **Web:** [www.telecost.com](http://www.telecost.com)

## 2. Reference Configuration

The configuration used for the compliance testing is shown below.

## 3. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment	Software
Avaya IP Office 500	6.1 (5)
Avaya 2400 Series Digital Telephones	Release 6
Avaya 5600 Series IP Telephones (H.323)	2.9.1
RSI Revolution Web Call Accounting	2.6.1.97.6

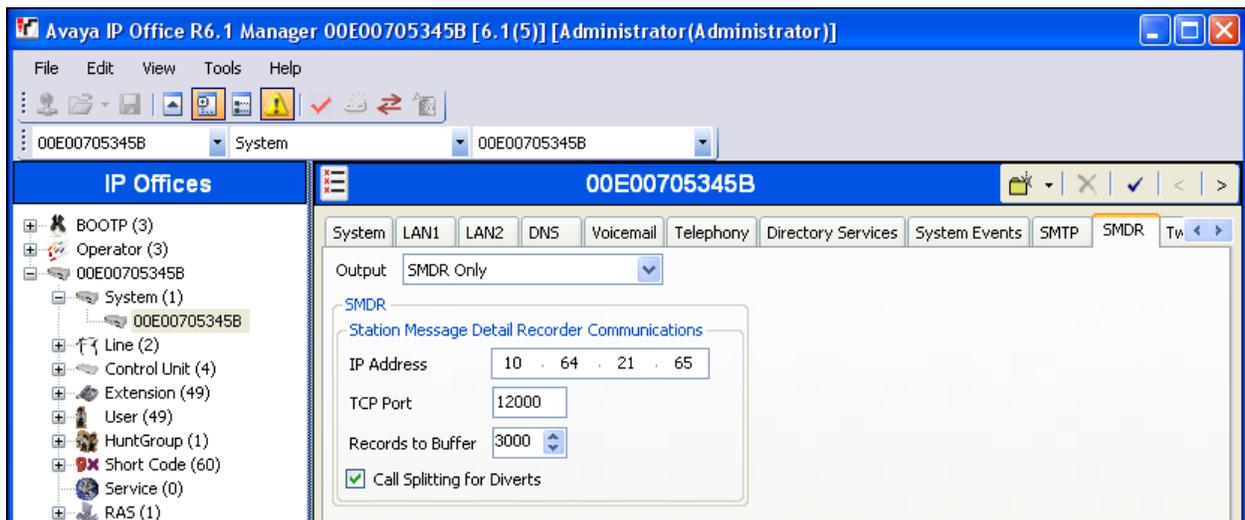

## 4. Configure Avaya IP Office

This section provides the procedures for configuring Avaya IP Office.

From a PC running the Avaya IP Office Manager application, select **Start > Programs > IP Office > Manager** to launch the Manager application. Select the proper IP Office system, and log in with the appropriate credentials.

From the configuration tree in the left pane, select the appropriate **System** to display the system screen tabs in the right pane. Select the **SMDR** tab. Select “SMDR Only” from the **Output** drop-down list, to display the **SMDR** section.

For **IP Address**, enter the IP address of the RSI Revolution Web Call Accounting server. For **TCP Port**, enter a desired port, in this case “12000”. Modify **Records to Buffer** if desired, and check **Call Splitting for Diverts**. The record buffer is used by IP Office to cache SMDR records in the case of a communication failure with RSI Revolution Web Call Accounting.

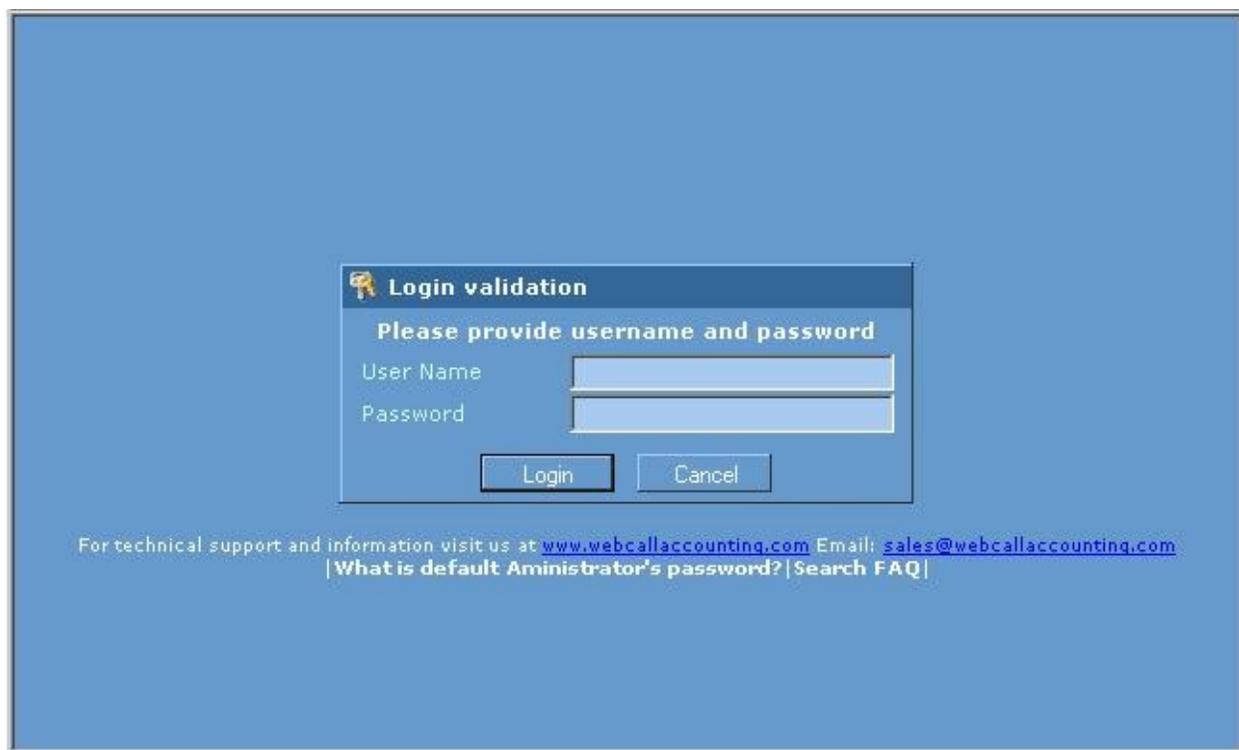

## 5. Configure RSI Revolution Web Call Accounting

This section provides the procedures for configuring RSI Revolution Web Call Accounting. The procedures include the following areas:

- Launch application
- Administer PBX communication

### 5.1. Launch Application

From the Revolution Web Call Accounting server, select **Start > All Programs > RSI > Run Revolution Web Call Accounting** to display the **Login validation** screen in a browser window. Log in using the appropriate credentials.

The screenshot shows a blue-themed web page with a central dialog box titled "Login validation". The dialog box contains the text "Please provide username and password" and two input fields labeled "User Name" and "Password". Below the input fields are two buttons: "Login" and "Cancel". At the bottom of the page, there is a footer with technical support information: "For technical support and information visit us at [www.webcallaccounting.com](http://www.webcallaccounting.com) Email: [sales@webcallaccounting.com](mailto:sales@webcallaccounting.com) | [What is default Administrator's password?](#) | [Search FAQ](#)".

## 5.2. Administer PBX Communication

The **Home** screen is displayed. Select **Configuration > PBX Communication** from the left pane.

The screenshot shows the 'Home' screen of a software application. On the left is a vertical navigation pane with the following items: Main, Configuration, Common Settings, PBX Communication, Web Config, Security Accounts, Administration, Maintenance, Settings, Views, Reports, Support, and Log files. The main content area is titled 'Home' and contains a message: 'Unregistered version. Please register.' Below this, there are several folders and lists of options:

- Web**
  - Register: Register your copy of the software
  - About: About this software and developer informations
  - Login: Login to the system
  - Logoff: Logoff from the system
  - Download User Manual: Download user manual from the support web site
  - Change Password: Change your password
- Administration**
  - SMDR Reparser: Raw SMDR data reparser
  - Import SMDR: Import SMDR from file
  - Task Scheduler: Scheduled tasks list
- Maintenance**
  - Clear Data: Clear calls, SMDR data and logs
  - Backup Database: Backup system database
  - Restore Database: Restore system database
  - Purge Calls: Archive/Purge/Manage calls data
- Configuration**
  - Common Settings: Common settings and localisation options
  - PBX Communication: Keyphone / PBX communication settings
  - Web Config: Configure Port and root folder directory
  - Security Accounts: Setup users and passwords
- Settings**
  - Departments/Users: All departments and KTS/PBX users
  - Region Codes: List of all region codes
  - Operators/Rates
- Reports**

At the bottom of the main content area, there is a footer: 'For technical support and information visit us at [www.webcallaccounting.com](http://www.webcallaccounting.com) Email: [sales@webcallaccounting.com](mailto:sales@webcallaccounting.com) | [Online Help](#) | [Search FAQ](#)'

The **Configuration** screen is displayed next. Select the **Common** tab. Enter a desired **PBX Name** and **Description**, and retain the default value in the remaining field.

Main

Unregistered version. Please register.

**Configuration**

Configuration

PBX Communication - This page allows you to configure PBX communication.

**WARNING:** Incorrect root folder path and/or script may cause system to be unable to parse calls.

| [Learn more about configuring PBX](#) | [Search FAQ](#) |

Select the **Port** tab. For **Port**, select “TCP” from the drop-down list. For **Port** number, enter the TCP port number from **Section 4**.

The screenshot displays the 'Configuration' section of a web interface. On the left is a vertical navigation menu with items: Main, Configuration, Common Settings, PBX Communication, Web Config, Administration, Maintenance, Settings, Views, Reports, Support, and Log files. The main content area has a blue header with 'Unregistered version. Please register.' and 'Configuration'. Below the header, there is a folder icon and the text 'PBX Communication - This page allows you to configure PBX communication.' followed by a warning icon and the text 'WARNING: Incorrect root folder path and/or script may cause system to be unable to parse calls.' The central part of the interface is a configuration window with tabs for 'Common', 'Port', 'Driver', and 'Properties'. The 'Port' tab is active, showing a dropdown menu with 'TCP' selected and an 'IP Parameters' section containing a 'Port' field with the value '12000'. Below the configuration window, there is a link: 'Your PBX type not listed here? Click [here](#) for additional information.' and three buttons: 'Save', 'Delete', and 'Cancel'. At the bottom, there is a footer with technical support information: 'For technical support and information visit us at [www.webcallaccounting.com](http://www.webcallaccounting.com) Email: [sales@webcallaccounting.com](mailto:sales@webcallaccounting.com) | [Learn more about configuring PBX](#) | [Search FAQ](#)'.

Select the **Driver** tab. For **PBX driver**, select “Avaya (IP Office 6)” from the drop-down list. Retain the default values in the remaining fields. Click **Save**.

The screenshot displays a web-based configuration interface for PBX communication. The interface is divided into a left-hand navigation menu and a main content area. The navigation menu includes links for Main, Configuration, Common Settings, PBX Communication, Web Config, Administration, Maintenance, Settings, Views, Reports, Support, and Log files. The main content area is titled "Configuration" and contains a warning message: "WARNING: Incorrect root folder path and/or script may cause system to be unable to parse calls." Below the warning is a configuration window with four tabs: Common, Port, Driver, and Properties. The "Driver" tab is active, showing a form with the following fields: "PBX driver" (a dropdown menu set to "Avaya (IP Office 6)"), "Driver description" (a text area containing "Version 1.3. This driver supports outgoing, incoming calls and Account Codes. Last update 6 Feb 2008."), and "Duration correction (sec.)" (a text input field set to "0"). Below the form are "Save", "Delete", and "Cancel" buttons. At the bottom of the main content area, there is a link for additional information and contact information for technical support.

Unregistered version. Please register.

## 6. General Test Approach and Test Results

The feature test cases were performed manually. Different types of calls were made, along with different actions initiated from the user telephones, to verify proper parsing and displaying of received SMDR data by RSI Revolution Web Call Accounting.

The serviceability test cases were performed manually by disconnecting/reconnecting the Ethernet cables on the RSI Revolution Web Call Accounting server.

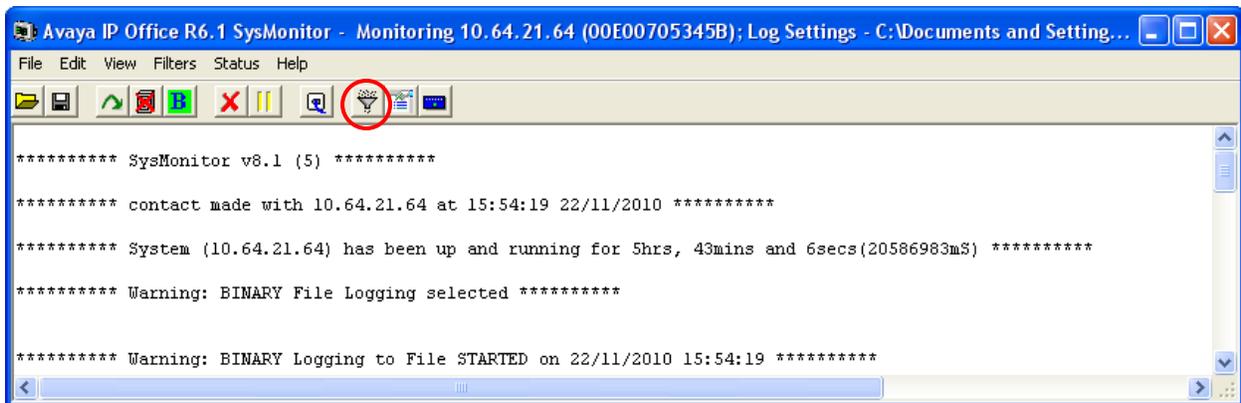

All test cases were executed and passed. The one observation from the compliance test is that the special characters in the destination digit string are stripped by RSI Revolution Web Call Accounting and not shown in the reports.

## 7. Verification Steps

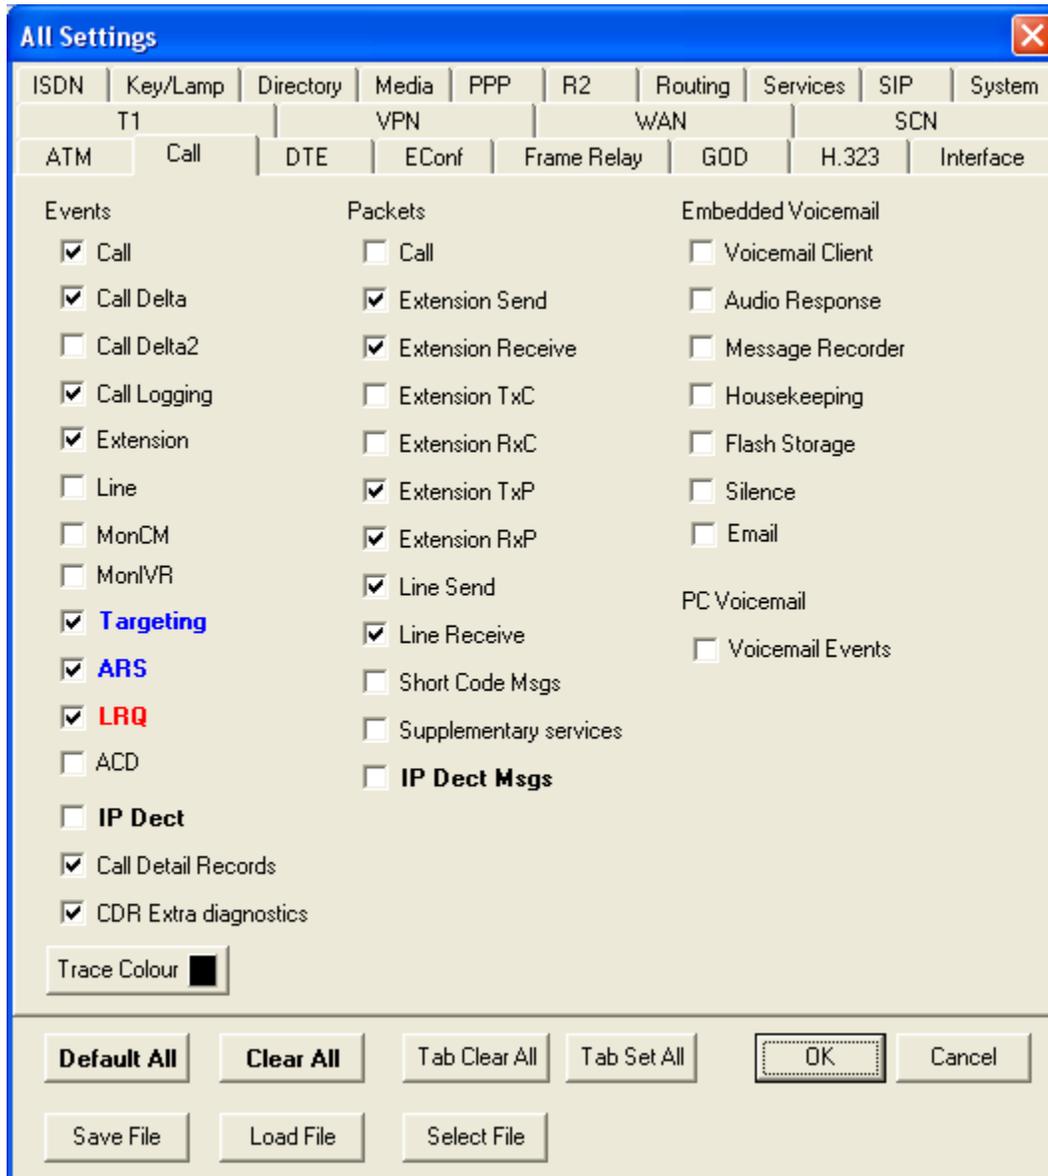

This section provides the tests that can be performed to verify proper configuration of Avaya IP Office and RSI Revolution Web Call Accounting.

### 7.1. Verify Avaya IP Office

From a PC running the Avaya IP Office Monitor application, select **Start > Programs > IP Office > Monitor** to launch the application. The **Avaya IP Office R6.1 SysMonitor** screen is displayed, as shown below. Click on the **Filter** icon.

The **All Settings** screen is displayed. Check **Call Detail Records** and **CDR Extra diagnostics**, as shown below.

Make and complete a few phone calls, including internal, inbound from the PSTN, and outbound to the PSTN. Verify that raw SMDR data is displayed on the **Avaya IP Office R6.1 SysMonitor** screen, as shown below.

```

## 7.2. Verify RSI Revolution Web Call Accounting

Access the Revolution Web Call Accounting web interface by using the URL “https://ip-address:3549” in an Internet browser window, where “ip-address” is the IP address of the Revolution Web Call Accounting server. Log in using the appropriate credentials.

The **Home** screen shown in **Section 5.1** is displayed. Select **Views** > **Live** from the left pane, to display the **Views** screen shown below. Select **Calls** from the right pane.

The screenshot displays the 'Views' page of the RSI Revolution Web Call Accounting interface. The left navigation pane includes the following menu items: Main, Configuration, Administration, Maintenance, Settings, Views (selected), List, Live, Reports, Support, and Log files. The main content area features a dark blue header with the word 'Views' in white. Below the header, the text reads: 'Unregistered version. Please register.' followed by a yellow folder icon and the heading 'Live Views - This page allows you to watch a live online data view.' Below this, it says 'To activate view click corresponding reference in list.' There are two green arrow icons pointing right, one next to 'Raw' and one next to 'Calls'. Under 'Raw', the text says 'Live online view of raw SMDR data coming through COM port'. Under 'Calls', the text says 'Live online view of all calls registered by system'. At the bottom of the main content area, there is a footer with the text: 'For technical support and information visit us at [www.webcallaccounting.com](http://www.webcallaccounting.com) Email: [sales@webcallaccounting.com](mailto:sales@webcallaccounting.com) | [Learn more about Live Views](#) | [Search FAQ](#)'

The **Live Views** screen is displayed. Verify that an entry is displayed for each SMDR record output from **Section 7.1**.

## 8. Conclusion

These Application Notes describe the configuration steps required for RSI Revolution Web Call Accounting to successfully interoperate with Avaya IP Office. All feature and serviceability test cases were completed with one observation noted in **Section 6**.
