

Avaya Solution & Interoperability Test Lab

Application Notes for INVISION Billing System Version 8.0 with Avaya Aura® Communication Manager R6.3 - Issue 1.0

Abstract

These Application Notes describe the configuration steps required for INVISION Billing System Version 8.0 to interoperate with Avaya Aura® Communication Manager R6.3.

INVISION Billing System is an enterprise software solution that provides customers with detailed analysis of PABX communication usage. INVISION Billing System interoperates with Avaya Aura® Communication Manager over TCP/IP for the collection of call detail records.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

The objective of this interoperability compliance testing is to verify that INVISION Billing System Version 8.0 can interoperate with Avaya Aura® Communication Manager R6.3. INVISION Billing System interoperates with Avaya Aura® Communication Manager over TCP/IP for the collection of Call Detail Records (CDR). During the compliance testing, CDR collection was verified for two Avaya Aura® Communication Manager Systems:

- A duplex pair of Avaya S8800 Servers
- Avaya S8300D Server

2. General Test Approach and Test Results

The general test approach was to manually place intra-switch calls, inter-switch H323 IP Trunk calls, inbound and outbound PSTN trunk calls to and from telephones on Avaya Aura® Communication Manager (Communication Manager) Systems, and verify that INVISION Billing System collects the CDR records and reports the correct attributes of the call.

There are some differences in Communication Manager in the call records generated by SIP endpoints compared to Analog, Digital, and H.323 endpoints. As a result in certain scenarios involving SIP endpoints (e.g., two-party call, transfer, or conference), a CDR application may see more or less records, or records with condition codes/calling party other than expected. Avaya is investigating the differences and code changes may be made available in a future release pending the outcome of that investigation.

2.1. Interoperability Compliance Testing

The interoperability compliance testing included feature and serviceability testing. CDR links without reliable protocol were tested.

For feature testing, the ability of INVISION Billing System to collect and process CDR records for intra-switch calls, inter-switch calls, inbound and outbound PSTN trunk calls to and from telephones on both Communication Manager systems was evaluated.

For serviceability testing, the following were performed:

- Busied out and released the CDR links on Communication Manager.
- Disconnected and reconnected network connection to the INVISION Billing System server.
- Rebooted the INVISION Billing System, Avaya S8300D Server.

2.2. Test Results

All test cases described in **Section 2.1** passed successfully.

2.3. Support

Technical support for INVISION Billing System can be obtained through the following:

- Phone: +62-81-1101109
- Email: support@invision-ap.com

3. Reference Configuration

Figure 1 illustrates the network configuration used to verify the INVISION Billing System solution. Site A is comprised of a pair of duplex Avaya S8800 Servers running Communication Manager and Avaya G650 Media Gateway, and has connections to the following: Avaya 96x1 and 1600 Series H323 IP Telephones, Avaya 1400 Series Digital Telephones, and an ISDN-BRI trunk to the PSTN. INVISION Billing System is installed on a server running Microsoft Windows Server 2003 with Service Pack 2. Site B is comprised of an Avaya S8300D Server running Communication Manager with Avaya G450 Media Gateway, and has connections to Avaya 9600 Series IP Telephone and 1400 Series Digital Telephone. The Avaya 5520-48T-PWR Ethernet Routing Switch provides Ethernet connectivity to the servers and H323 IP telephones and Layer 3 IP routing between the two sites. An H.323 IP trunk is configured between Site A and B for the users to call between the two sites.

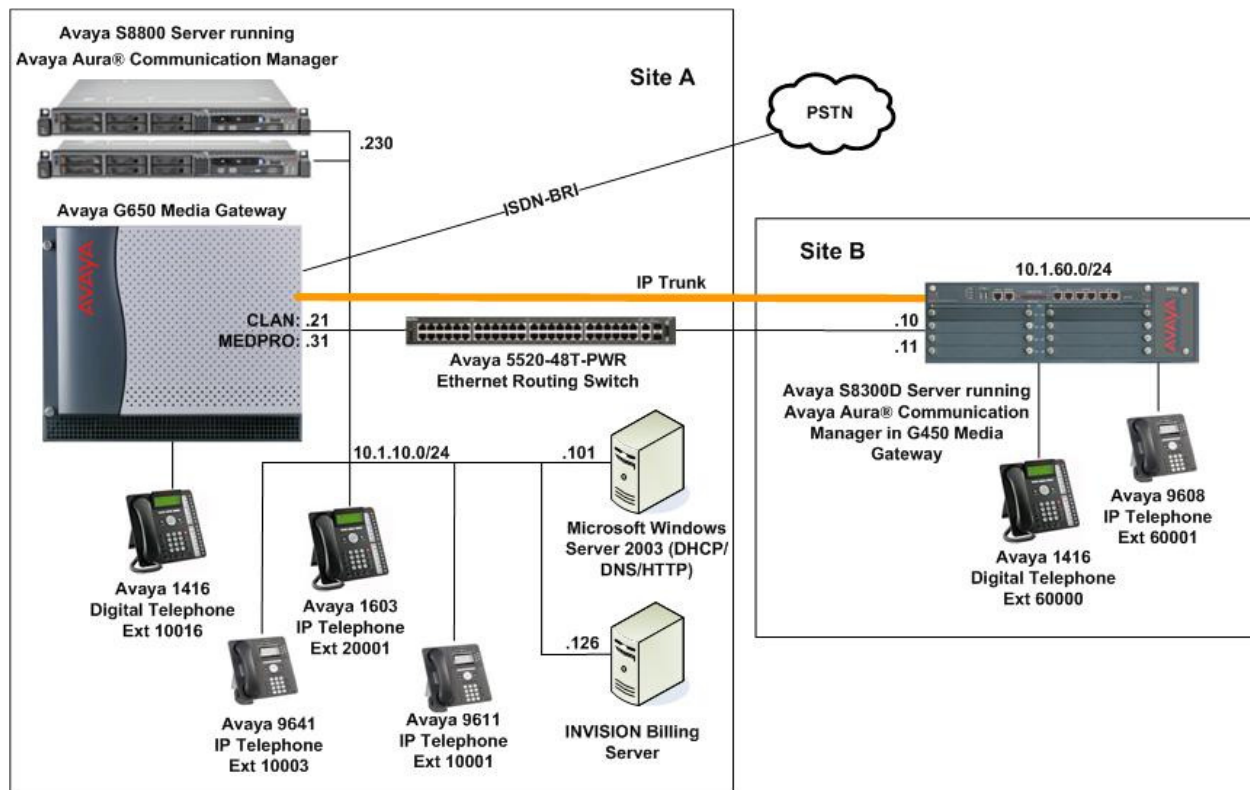

Figure 1: Test configuration for INVISION Billing System solution

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment	Software
Avaya S8800 Server Duplex Server	Avaya Aura® Communication Manager R6.3 Build R016x.03.0.124.0-21503
Avaya G650 Media Gateway <ul style="list-style-type: none">• TN2312BP IP Server Interface• TN799DP C-LAN Interface• TN2302AP IP Media Processor• TN2602AP IP Media Processor• TN2214CP Digital Line	- HW07, FW057 HW01, FW040 HW20, FW121 HW02, FW063 HW08, FW015
Avaya S8300D Server	Avaya Aura® Communication Manager R6.3 Build R016x.03.0.124.0-21503
Avaya G450 Media Gateway	34.5.1
Avaya 9600 Series IP Telephones <ul style="list-style-type: none">• 9641• 9611• 9608	6.3 (H.323) 6.3 (H.323) 6.3 (H.323)
Avaya 1600 Series IP Telephones - 1603	1.34 (H.323)
Avaya 1416 Digital Telephone	R4 SP2
Avaya 5520-48T-PWR Ethernet Routing Switch	V6.2.4.010
INVISION Billing System Microsoft SQL 2008 32 bit Server installed on same server	8.0

5. Configure Avaya Aura® Communication Manager

This section provides the procedures for configuring Call Detail Recording (CDR) in Communication Manager. All configuration changes in Communication Manager are performed through the System Access Terminal (SAT). These steps describe the procedure used for Communication Manager Site A. All steps are the same for Communication Manager Site B. Communication Manager is configured to generate and send the CDR records to the IP address of the INVISION Billing System server over TCP/IP. For this configuration, the CDR links are configured to originate from the IP addresses of the Communication Manager Site A and Site B (i.e. with node-name – “procr”) and terminates at the IP address of the INVISION Billing System server. The highlights in the following screens indicate the parameter values used during the compliance test.

Step	Description												
1.	<p>Use the change node-names ip command to add a new node name for the INVISION Billing System server.</p> <div><pre>change node-names ip</pre><div><div></div><div>Page 1 of 1</div></div><table><thead><tr><th>Name</th><th>IP Address</th><th>IP NODE NAMES</th></tr></thead><tbody><tr><td>default</td><td>0.0.0.0</td><td></td></tr><tr><td>procr</td><td>10.1.10.230</td><td></td></tr><tr><td>Invision</td><td>10.1.10.126</td><td></td></tr></tbody></table></div>	Name	IP Address	IP NODE NAMES	default	0.0.0.0		procr	10.1.10.230		Invision	10.1.10.126	
Name	IP Address	IP NODE NAMES											
default	0.0.0.0												
procr	10.1.10.230												
Invision	10.1.10.126												
2.	<p>Use the change ip-services command to define the CDR link. To define a primary CDR link, the following information should be provided:</p> <ul style="list-style-type: none">• Service Type: CDR1 [If needed, a secondary link can be defined by setting Service Type to CDR2.]• Local Node: procr• Local Port: 0 [The Local Port is fixed to 0 because Communication Manager initiates the CDR link.]• Remote Node: Invision [The Remote Node is set to the node name previously defined in Step 1.]• Remote Port: 5001 [The Remote Port may be set to a value between 5000 and 64500 inclusive, and must match the port configured in INVISION Billing System server in Section 6.4. Note that the same port can be used for each Communication Manager system regardless if they are survivable or separate systems as the records distinguish the different ip addresses]												

Step	Description																																										
	<div>change ip-services<div>Page1 of 4</div></div> <div><table><tr><th colspan="7">IP SERVICES</th></tr><tr><th>Service Type</th><th>Enabled</th><th>Local Node</th><th>Local Port</th><th>Remote Node</th><th colspan="2">Remote Port</th></tr><tr><td>CDR1</td><td>procr</td><td></td><td>0</td><td>Invision</td><td colspan="2">5001</td></tr></table></div> <div>On Page 3 of the IP SERVICES form, enable or disable the Reliable Session Protocol (RSP) for the CDR link by setting the Reliable Protocol field to n as it is not supported. In this compliance testing, CDR is tested without reliable protocol.</div> <div>change ip-services<div>Page3 of 4</div></div> <div><table><tr><th colspan="7">SESSION LAYER TIMERS</th></tr><tr><th>Service Type</th><th>Reliable Protocol</th><th>Packet Resp Timer</th><th>Session Connect Message Cntr</th><th>SPDU Cntr</th><th colspan="2">Connectivity Timer</th></tr><tr><td>CDR1</td><td>n</td><td>30</td><td>3</td><td>3</td><td colspan="2">60</td></tr></table></div>	IP SERVICES							Service Type	Enabled	Local Node	Local Port	Remote Node	Remote Port		CDR1	procr		0	Invision	5001		SESSION LAYER TIMERS							Service Type	Reliable Protocol	Packet Resp Timer	Session Connect Message Cntr	SPDU Cntr	Connectivity Timer		CDR1	n	30	3	3	60

6. Configure INVISION Billing System

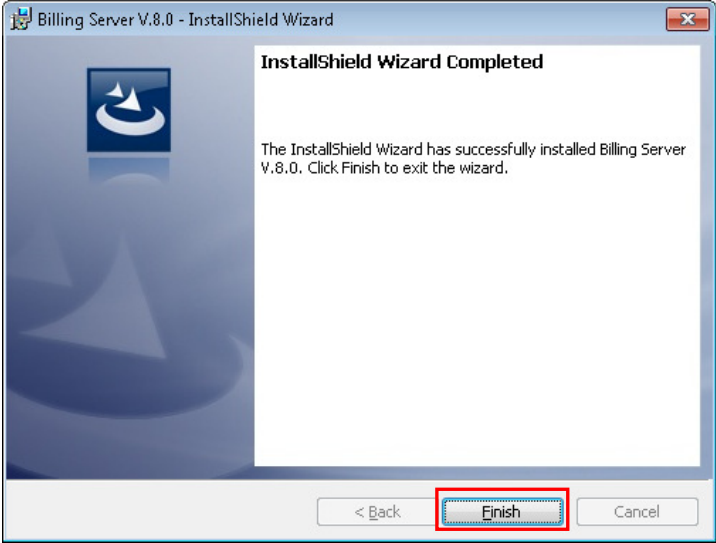

This section describes the configuration of INVISION Billing System. This involves the following:

1. Install Billing Server
2. Install Billing Client
3. Restore Database
4. Setup Billing Server
5. Setup Billing Client

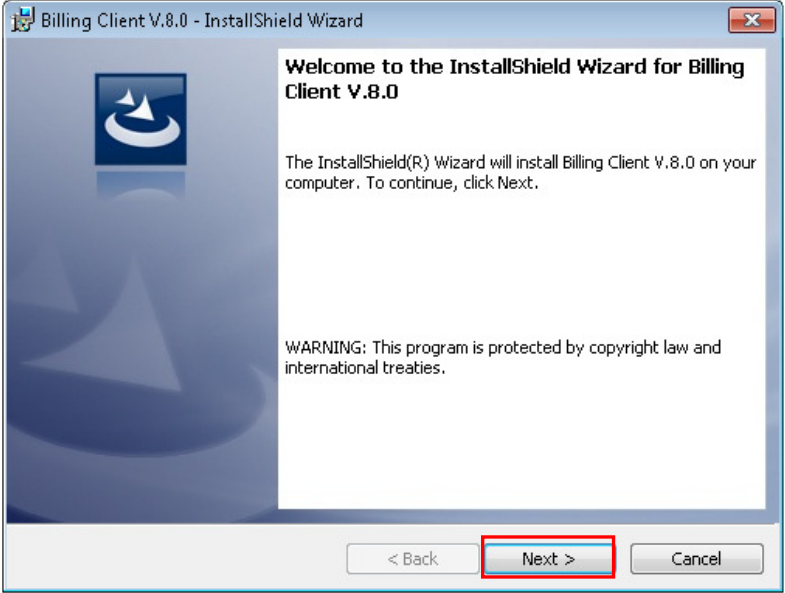

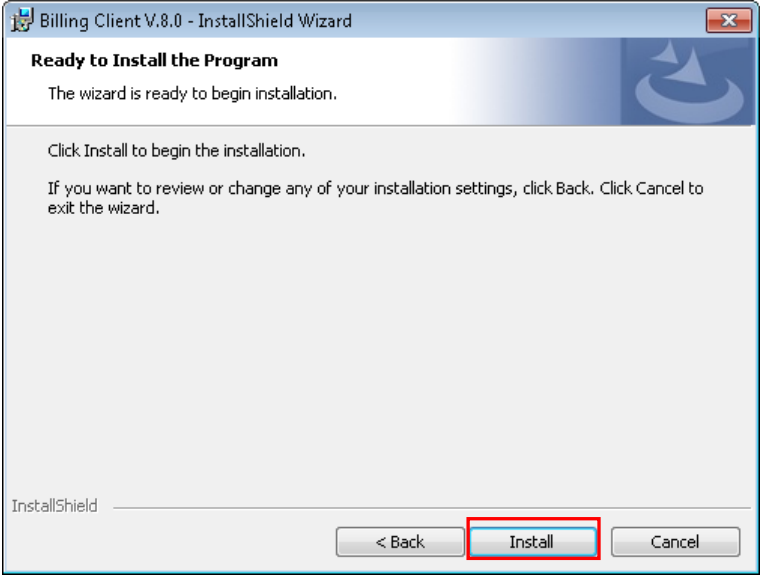

6.1. Install Billing Server

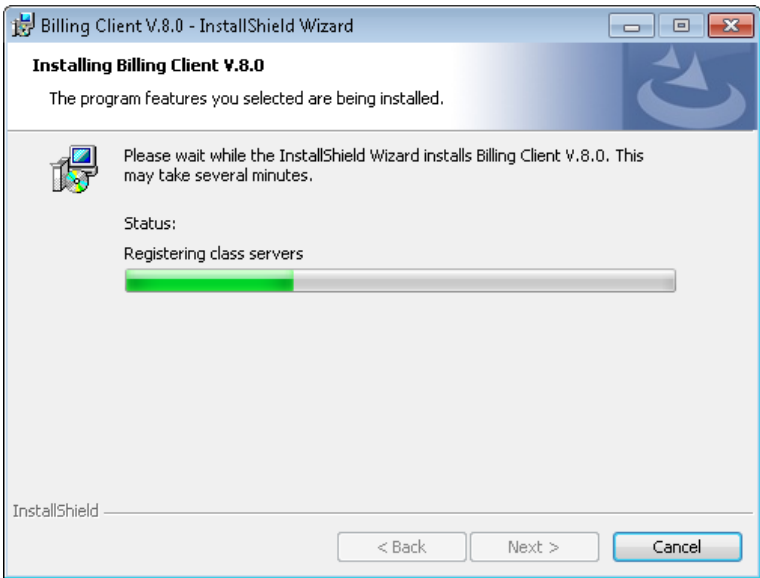

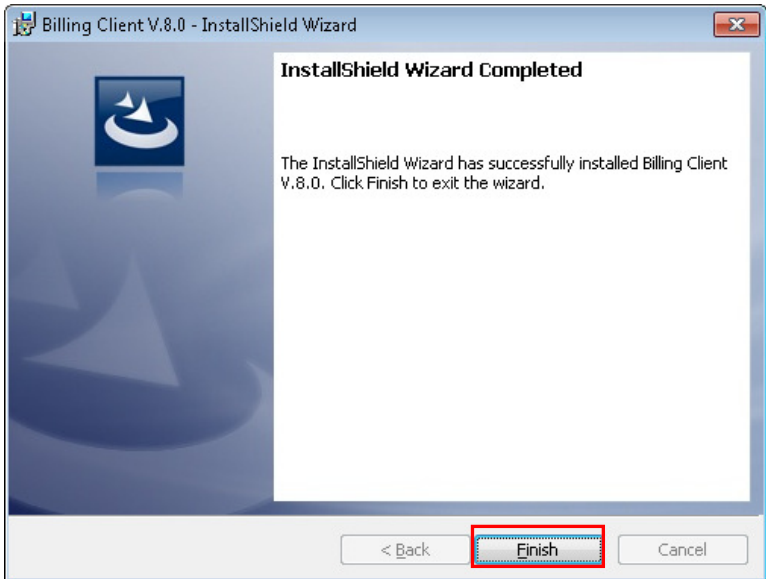

Step	Description
1.	<p>Install the Billing server software from the setup program provided. Click Next to continue.</p> 
2.	<p>Click Next to continue (or change the default installation directory).</p> 

Step	Description
3.	<p>Click Install to continue.</p> 
4.	<p>Installation will proceed as in screenshot below:</p> 

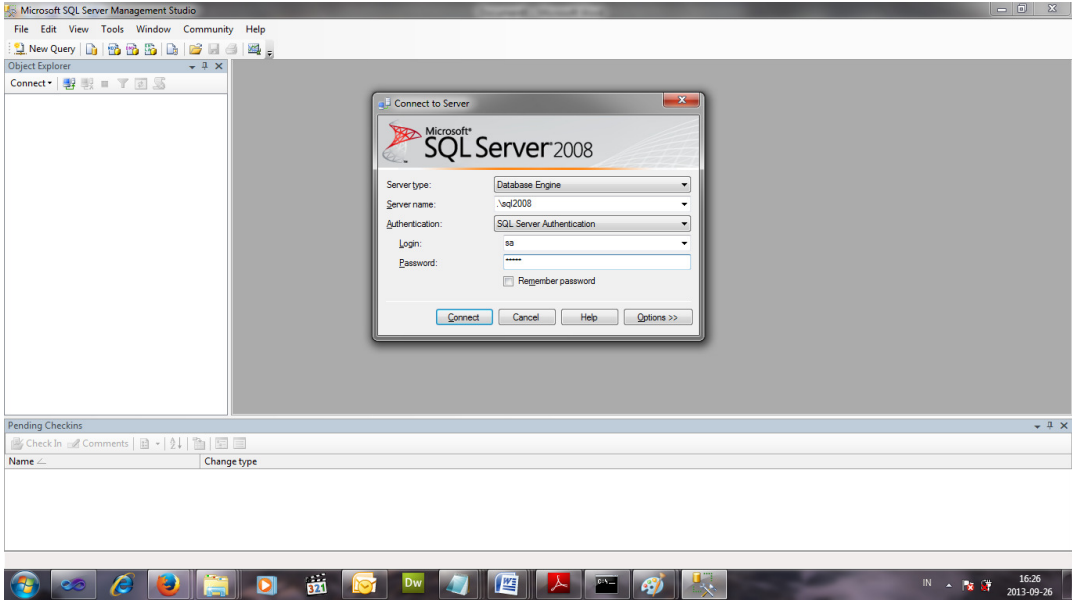

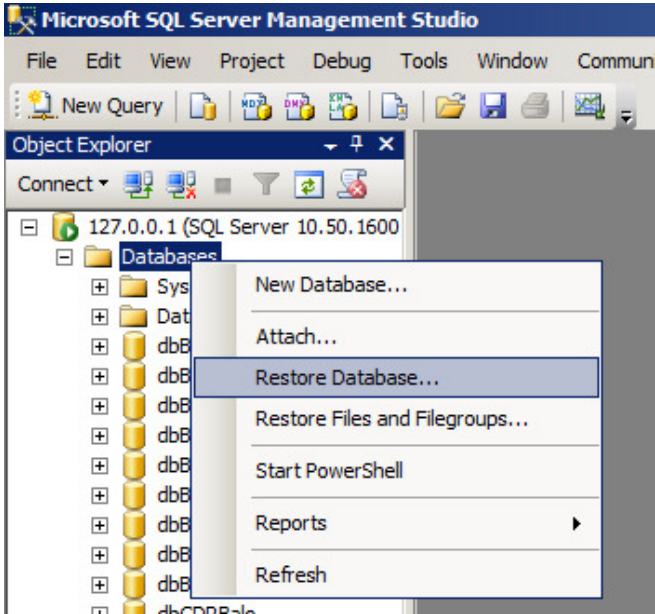

Step	Description
5.	<p>Click Finish to complete installation.</p> 

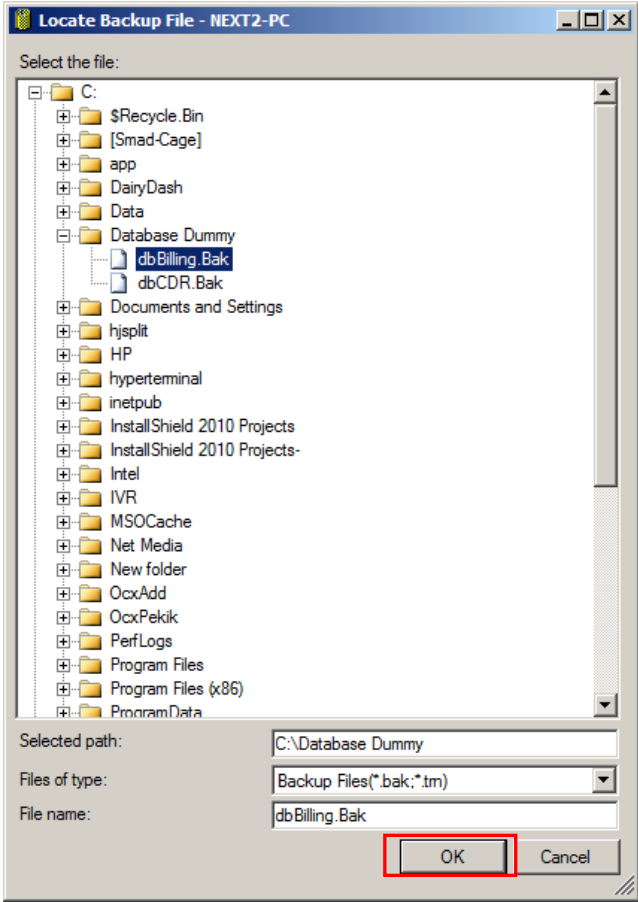

6.2. Install Billing Client

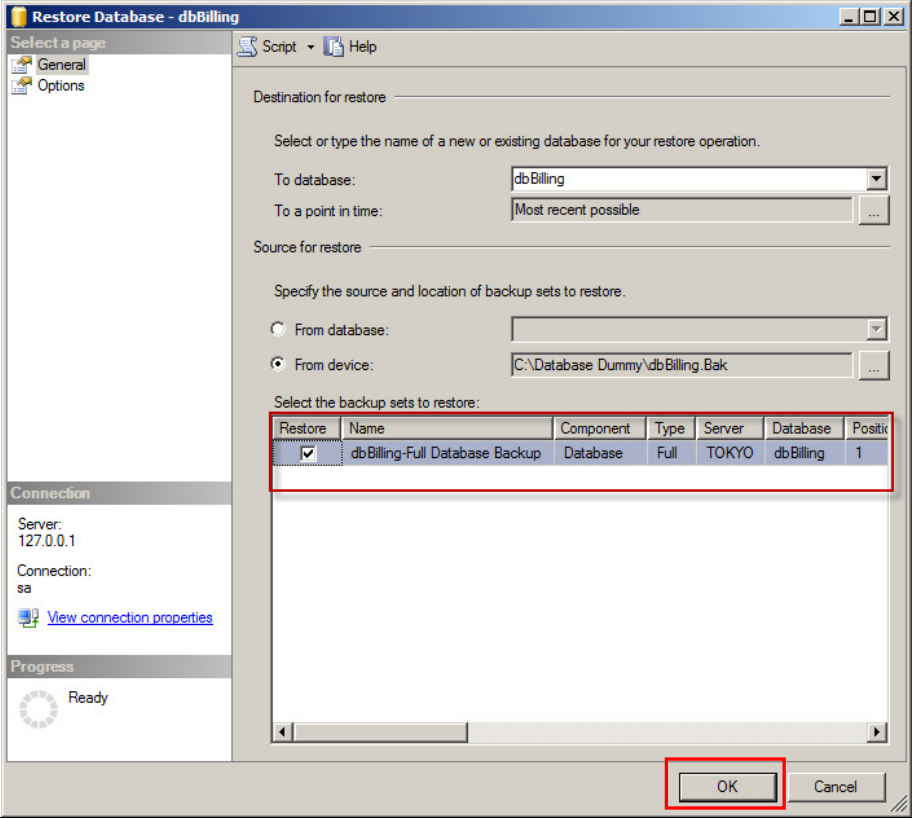

Step	Description
1.	<p>The Billing Client can be installed on any PC. In this Compliance Test, the Billing Client is installed on the Billing Server.</p> <p>Install the Billing Client software from the setup program provided. Click Next to continue.</p> 
2.	<p>Click Install to continue.</p> 

Step	Description
3.	Install progress as screenshot below.  <p>The screenshot shows the 'Billing Client V.8.0 - InstallShield Wizard' window. The title bar says 'Billing Client V.8.0 - InstallShield Wizard'. The main window has a blue header with the text 'Installing Billing Client V.8.0' and a sub-header 'The program features you selected are being installed.' Below this, there is a message: 'Please wait while the InstallShield Wizard installs Billing Client V.8.0. This may take several minutes.' followed by a 'Status:' section showing 'Registering class servers' with a green progress bar. At the bottom, there are buttons for '< Back', 'Next >', and 'Cancel'.</p>
4.	Click Finish to complete.  <p>The screenshot shows the 'Billing Client V.8.0 - InstallShield Wizard' window at the completion stage. The title bar says 'Billing Client V.8.0 - InstallShield Wizard'. The main window has a blue header with the text 'InstallShield Wizard Completed' and a sub-header 'The InstallShield Wizard has successfully installed Billing Client V.8.0. Click Finish to exit the wizard.' Below this, there are buttons for '< Back', 'Finish', and 'Cancel'. The 'Finish' button is highlighted with a red rectangular box.</p>

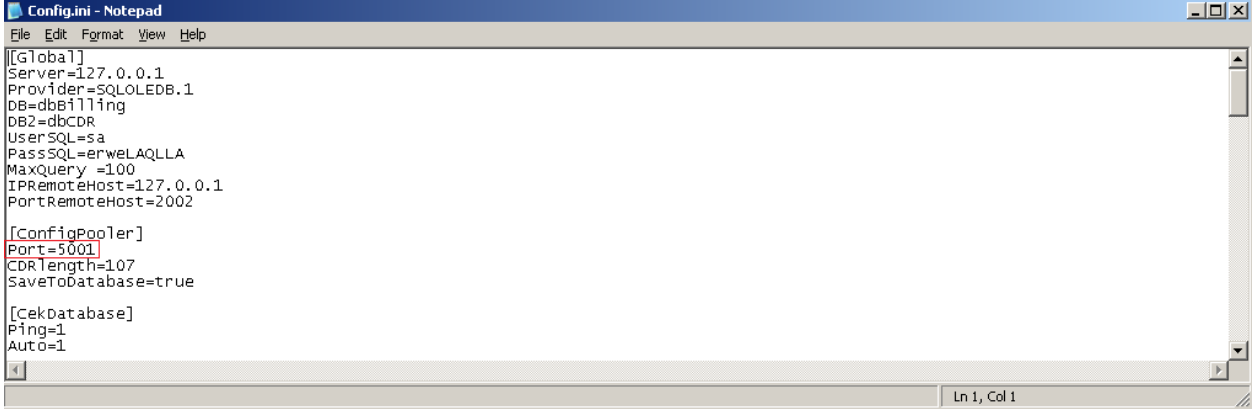

6.3. Restore Database

Step	Description
1.	<p>Setup of the database server will not be covered in this application note. Below highlights the steps used to restore the database. Open <i>SQL Server Management</i> (not shown) and log in with the appropriate login and password. Click Connect to continue.</p> 
2.	<p>Restore the database by selecting 127.0.0.1 (SQL ...) → Databases → Restore Database.</p> 

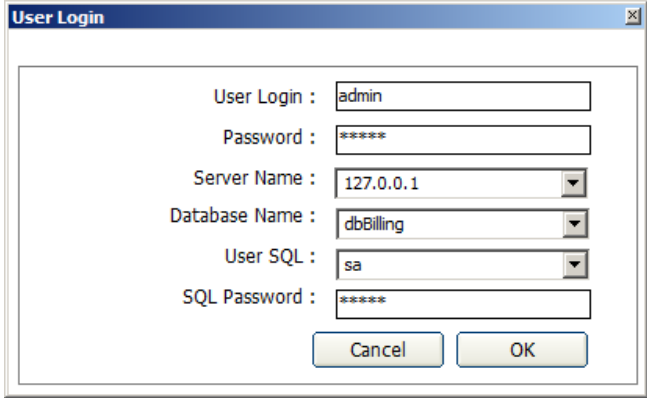

Step	Description
3.	<p>Select the backup sets to restore from its location. In the following, dbBilling.bak is restored. Click OK to continue.</p> 

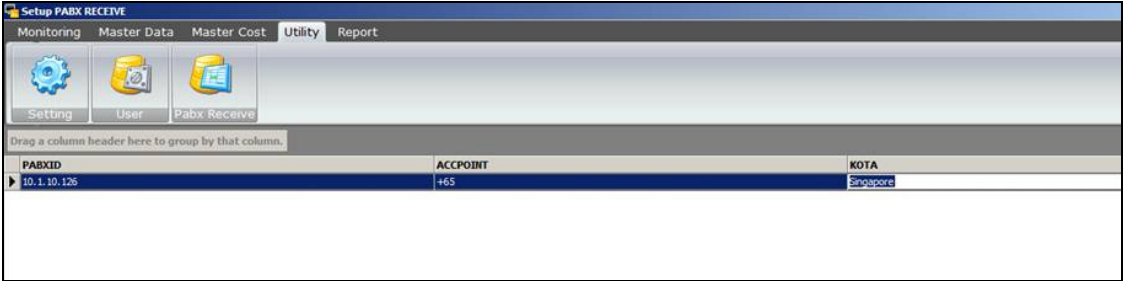

Step	Description
4.	<p>Click OK to finish restore.</p>  <p>The screenshot shows the 'Restore Database - dbBilling' dialog box. The 'Destination for restore' section has 'To database: dbBilling' and 'To a point in time: Most recent possible'. The 'Source for restore' section has 'From device: C:\Database Dummy\dbBilling.Bak'. A table titled 'Select the backup sets to restore:' contains one row: 'dbBilling-Full Database Backup' (Database, Full, TOKYO, dbBilling, 1). The 'OK' button is highlighted with a red box.</p>
5.	Repeat Step 3 to 4 for database dbCDR.bak .

6.4. Setup Billing Server

Step	Description
1.	<p>Open the file <i>config.ini</i> in the Billing Server folder. Ensure that the port set tallies with the port setting on Communication Manager Section 5 Step 2.</p> 

6.5. Setup Billing Client

Step	Description
1.	<p>Login to the Billing Client with the appropriate login and password.</p> 

Step	Description
2.	<p>In the Menu Utility, select the Pabx Received menu and input the PABXID, AccPoint (Code Area) and City. PABXID is the ip address of the Communication Manager.</p> 

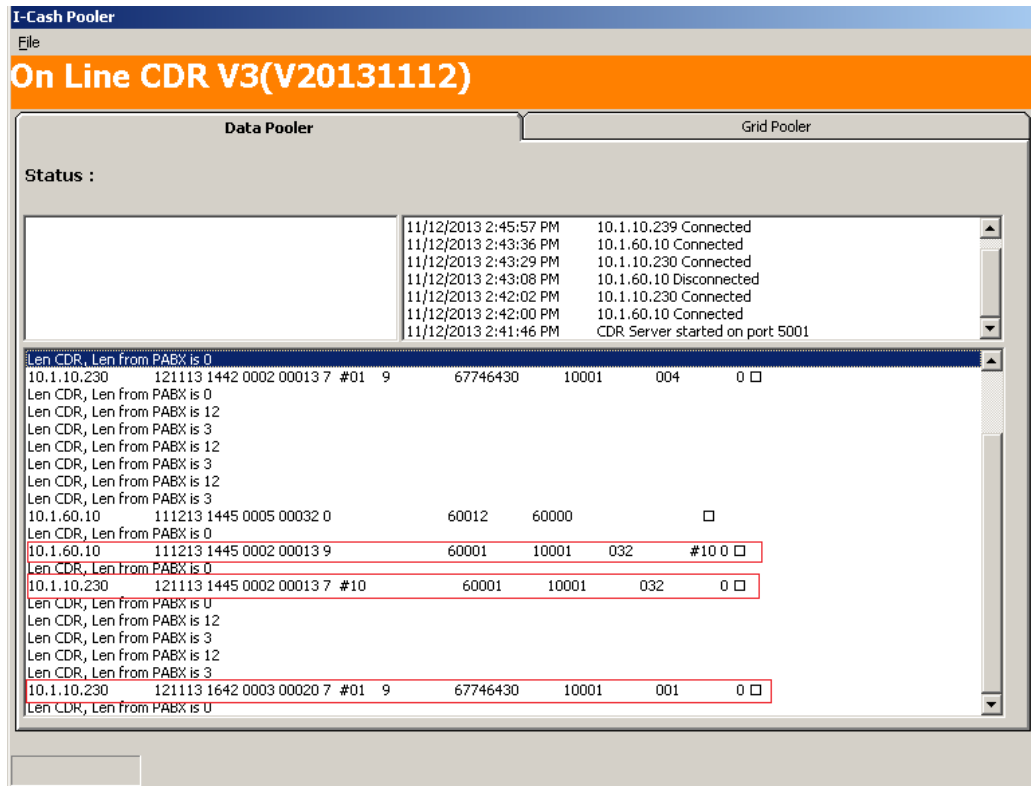

6.6. Verification Steps

The following steps may be used to verify the configuration:

- Confirm that the INVISION Billing System server and Communication Manager Site A or Site B can ping each other.
- On the SAT of each Communication Manager Site A and Site B, enter the **status cdr-link** command and verify that the **Link State** shows **up**.

status cdr-link		
	CDR LINK STATUS	
	Primary	Secondary
Link State:	up	CDR not administered
Date & Time:	2013/11/12 14:42:02	0000/00/00 00:00:00
Forward Seq. No:	0	0
Backward Seq. No:	0	0
CDR Buffer % Full:	0.00	0.00
Reason Code:	OK	

- Place an outgoing PSTN trunk call on the Communication Manager Site A and a Trunk call from Communication Manager Site A to Site B. Verify that INVISION Billing System receives the CDR record for the calls. Login to INVISION Billing System and compare the values of data fields in the CDR record with the expected values and verify that they match.

- Place internal, inbound trunk, and outbound trunk calls to and from various telephones, generate an appropriate report in INVISION Billing System and verify the report's accuracy.

7. Conclusion

These Application Notes describe the procedures for configuring INVISION Billing System to collect call detail records from Avaya Aura® Communication Manager. INVISION Billing System successfully passed the compliance testing.
