

## Avaya Solution & Interoperability Test Lab

# **Application Notes for configuring Ascom Wifi Myco Smartphones with Avaya Communication Server 1000 Release 7.6 – Issue 1.0**

## **Abstract**

These Application Notes describe a solution comprised of Ascom Wifi Myco smartphones with Avaya Communication Server 1000 7.6. During the compliance testing, the Ascom Wifi Myco smartphone registered as a SIP endpoint with Communication Server 1000 SIP Line gateway. The Ascom Wifi Myco smartphone made and received calls. The compliance testing focused on basic telephone features.

Readers should pay attention to **Section 2**, in particular the scope of testing as outlined in **Section 2.1** as well as any observations noted in **Section 2.2**, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

## **1. Introduction**

These application notes provide detail configurations of Avaya Communication Server 1000 7.6 (Communication Server 1000) and the Ascom Wifi Myco smartphones (Myco) used during the compliance testing. Myco registered with the SIP Line Gateway (SLG) application on the Communication Server 1000.

## **2. General Test Approach and Test Results**

The general test approach was to have the Myco to register to the Communication Server 1000. Calls were then placed from other Communication Server 1000 telephone clients/users to and from the Myco. Other telephony features such as busy, hold, Transfer, Conference, Call Forward, DTMF and codec negotiation were also verified.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya's formal testing and Declaration of Conformity is provided only on the headsets/handsets that carry the Avaya brand or logo. Avaya may conduct testing of non-Avaya headset/handset to determine interoperability with Avaya phones. However, Avaya does not conduct the testing of non-Avaya headsets/handsets for: Acoustic Pressure, Safety, Hearing Aid Compliance, EMC regulations, or any other tests to ensure conformity with safety, audio quality, long-term reliability or any regulation requirements. As a result, Avaya makes no representations whether a particular non-Avaya headset will work with Avaya's telephones or with a different generation of the same Avaya telephone.

Since there is no industry standard for handset interfaces, different manufacturers utilize different handset/headset interfaces with their telephones. Therefore, any claim made by a headset vendor that its product is compatible with Avaya telephones does not equate to a guarantee that the headset will provide adequate safety protection or audio quality.

## **2.1. Interoperability Compliance Testing**

The focus of this testing was to verify that the Myco was able to interoperate with the Communication Server 1000. The following areas were tested:

- Registration of the Myco to the Communication Server 1000.
- Call establishment of Myco with Communication Server 1000 Deskphones.
- Telephony features tested included:
  - Basic calls
  - Conference (Avaya telephones host the conference only)
  - Blind and consultative transfer
  - DTMF transmission
  - Busy, hold, call waiting, call park/pickup
  - Call forward on Busy, No answer and All Calls
- PSTN calls over PRI trunk.
- Codec negotiation (G711 A-Law, G711 MU-Law and G729).

## **2.2. Test Results**

Tests were performed to verify interoperability between Myco and Avaya Communication Server 1000 handsets. The tests were all functional in nature and performance testing was not included. All test cases passed successfully. The following observations were made during compliance testing:

- Call decline does not work as per design intent of SLG as explained in SLG fundamentals; in the section IP-Phone based Call Decline (Refer to **Section 10**, Chapter 5).
- Call Forward Busy and Call Forward No Answer can only be done using the handset configuration on Communication Server 1000 and not by any Flexible Feature Code (FFC), as it is not available.
- G722 Codec could not be tested since there is no provision to add a zone in Communication Server 1000 that can support G722.

### **2.2.1. Not Supported by Myco Design**

The following are not supported by Myco by design,

- Myco does not support at the moment sending EXP=0 in the SIP registration message when shutting the phone down. Known issue (MYCO-3199).
- Myco cannot initiate conference calls however can be included in a conference call.
- Myco does not support local call diversion like Call Forward All, Call Forward Busy and Call Forward No Answer from the smartphones.
- Myco does not support the Message Waiting Indication (MWI) feature.

## **2.3. Support**

Technical support for the Ascom Myco product can be obtained through a local Ascom supplier.  
Ascom global technical support:

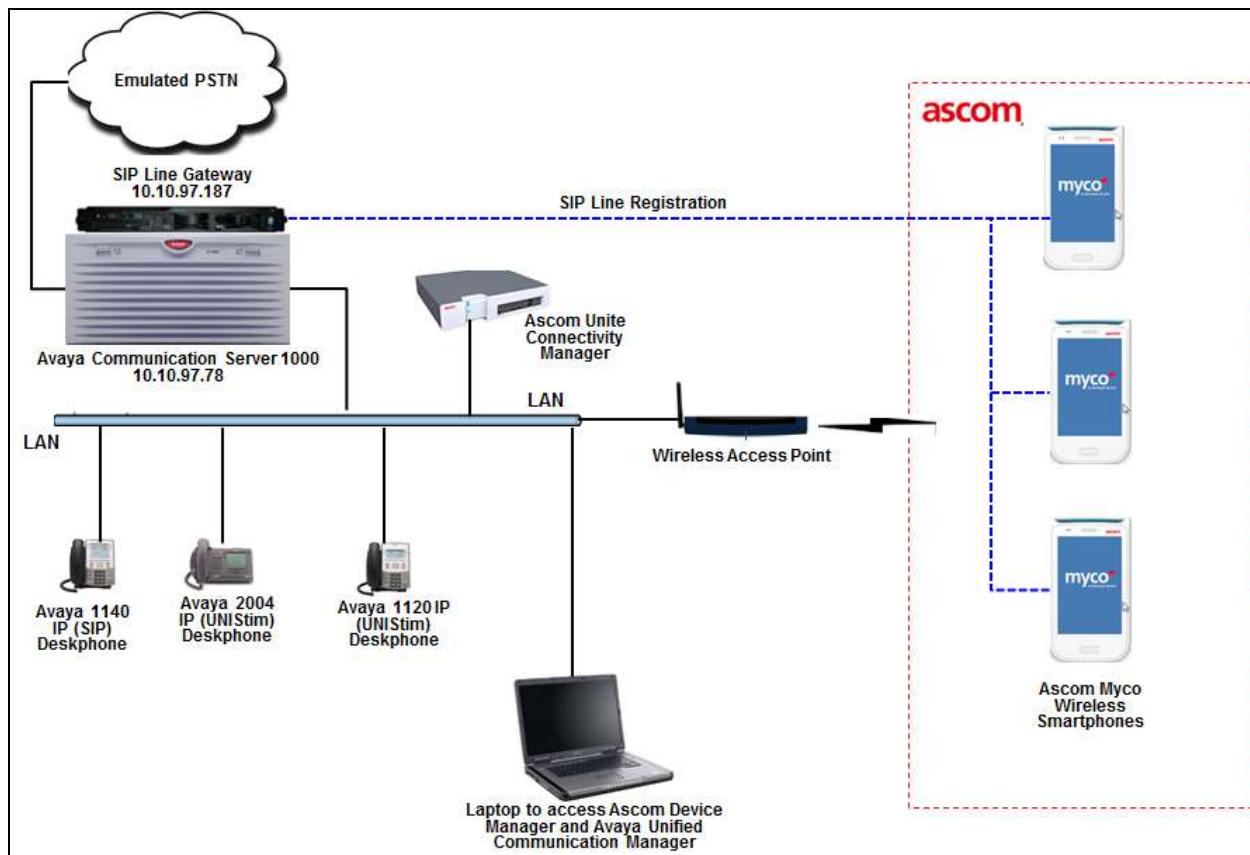

- Email: [support@ascom.se](mailto:support@ascom.se) or Help desk: +46 31 559450

### 3. Reference Configuration

**Figure 1** illustrates the test configuration used during the compliance testing between the Avaya Communication Server 1000 and the Ascom Myco system. The Communication Server 1000 runs on the Common Processor Pentium Mobile (CPPM) server as a co-resident configuration. The SLG application on the signaling server co-resides as on the CPPM. Unified Communication Manager (UCM) is used to configure the SLG. A number of Avaya Deskphones were configured. The Wireless Router was connected to the same IP Network as the Communication Server 1000. A simulated PSTN was configured to enable incoming and outgoing trunk calls.

A laptop on the network that can access and connect to the Ascom Device Manager is used to configure the Myco. The Ascom Unite Connectivity Manager (UniteCM) is the core software platform in the Ascom system.

**Note:** The configuration of the wireless router is outside the scope of these Application Notes.

**Figure 1: Avaya Commination Server 1000 and Ascom Reference Configuration**

## **4. Equipment and Software Validated**

The following equipment and software was used during the lab testing:

<b>Equipment/Software</b>	<b>Release/Version</b>
Call Processor Pentium Mobile (CPPM)	Avaya Communication Server 1000E R7.6 Version 7.65 P (SP6)
SIPLine Gateway	7.65.16
Avaya 2004 Deskphone (UNIStim) Avaya 1120E Deskphone (UNIStim) Avaya 1140E Deskphone (SIP)	0602B76 0624C8Q 04.03.12.00
Ascom WiFi Myco Smartphones	1.8.0
Ascom Device Manager running on Ascom UniteCM	5.3.8
Laptop to access Ascom Device Manager and Avaya UCM	Windows 7 Professional SP1

## 5. Configure Avaya Communication Server 1000

The configuration operations illustrated in this section were performed using terminal access to the Communication Server 1000 over a telnet session. It is implied that a working system is already in place, including a Node and D-Channel. For all other provisioning information such as Installation and Configuration, please refer to the product documentation in **Section 10**.

**Appendix A** has a list of all Communication Server 1000 patches, deplist and service packs loaded on the system.

**Note:** Only the unique prompts as shown in the screen captures below, all other inputs can be left at default.

**Note:** A full printout of the D-Channel, Route and Trunk information for the SIP Line Gateway used for the compliance testing is included in the **Appendix B** of these Application Notes.

### 5.1. Verify Licenses

To ensure the Communication Server 1000 is licensed for SIP, use **LD 22** and type **SLT** at the **REQ** prompt. Check for **THIRD PARTY SIP LINES**.

## 5.2. Configuring Data block: SLS (SIP Line Services)

If not already configured a SLS Data block needs to be created using the **CHG** command in **LD15**. The **UAPR** is required when configuring the UEXT for the Myco. Screen below shows an already configured SLS Data block using the print command in **LD 21**.

```
>ld 21

## 5.4. Saving Avaya Communication Server 1000 Configuration

Type **LD 43** at the > prompt to save the newly configured SIP users. Upon entering overlay 43 type **edd** at the . prompt.

```

>ld 43
EDD000
.edd

```

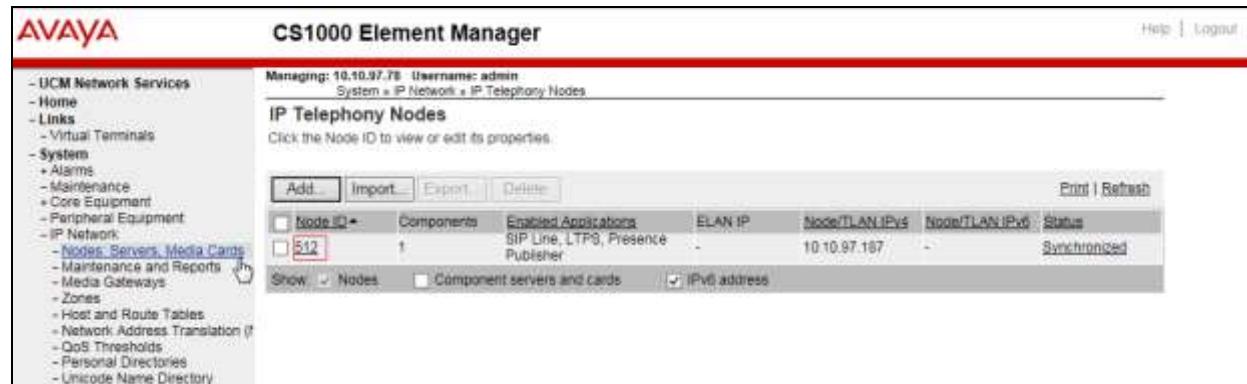

## 6. Configure Avaya Communication Server 1000 SIP Line Gateway

Although it is assumed that a SIP Line Gateway is already setup, configured and operational it is also essential that this is checked and that the Node IP address is obtained in order to complete the configuration in **Section 5.3** and **Section 7**. Note that the SIP Line Gateway is an application installed on the Avaya Communication Server 1000 Signalling Server. In this example, this Signalling Server is a co-resident installation with Communication Server 1000 Call Server.

Access to the Communication Server 1000 SIP Line Gateway requires access to the Avaya Communication Server 1000 Signalling Server (Signalling Server). This is achieved by logging into System Manager or Unified Communication Manager (UCM) using a Web Browser by entering <http://<IP Address>>, which is the IP address of System Manager or UCM. During compliance testing UCM was used.

Access the Communication Server 1000 Element Manager via the Unified Communication Manager (not shown).

Navigate to **System → IP Network → Nodes Servers, Media Cards** in the left window and select the Node associated with the Communication Server 1000, in the example below this **Node ID** is **512**. Open this node by clicking on **512** highlighted below. Note also the Node IP address **10.10.97.187** which will be required in **Section 7**.

The screenshot shows the CS1000 Element Manager interface. The left sidebar menu includes: UCM Network Services, Home, Links, Virtual Terminals, System (selected), Alarms, Maintenance, Core Equipment, Peripheral Equipment, IP Network, Nodes Servers, Media Cards (selected), Maintenance and Reports, Media Gateways, Zones, Host and Route Tables, Network Address Translation (NAT), QoS Thresholds, Personal Directories, and Unicode Name Directory. The main panel title is "CS1000 Element Manager" with the sub-path "Managing: 10.10.97.78 Username: admin System > IP Network > IP Telephony Nodes". It displays a table of IP Telephony Nodes with columns: Node ID, Components, Enabled Applications, ELAN IP, Node/TLAN IPv4, Node/TLAN IPv6, and Status. A row for Node ID 512 is shown with components SIP Line, LTPS, Presence, Publisher, ELAN IP 10.10.97.187, and Status Synchronized. Below the table are buttons for Add, Import, Export, Delete, Print, Refresh, Show, and Nodes, along with checkboxes for Component servers and cards and IPv6 address.

To check that the SIP Line Gateway is operational click on **SIP Line** in the main window highlighted below.

The screenshot shows the CS1000 Element Manager interface. The left sidebar contains a navigation tree with categories like UCM Network Services, System, and Customers. The main content area is titled "Node Details (ID: 512 - SIP Line, LTPS, Presence Publisher)". It displays fields for Node ID (512), Call server IP address (10.10.97.78), TLAN address type (IPv4 only selected), Embedded LAN (ELAN) settings (Gateway IP address 10.10.97.65, Subnet mask 255.255.255.192), and Telephony LAN (TLAN) settings (Node IPv4 address 10.10.97.187, Subnet mask 255.255.255.192). Below these are sections for "IP Telephony Node Properties" (including Voice Gateway (VGW) and Codecs, Quality of Service (QoS), LAN, SNTP, Numbering Zones, MCIN Alternative Routing Treatment (MALT), and Causes) and "Applications (click to edit configuration)" (with SIP Line checked). A note at the bottom indicates required values. Buttons for Save and Cancel are at the bottom right.

The **SIP Line Gateway Application** box should be checked as shown below and the information about the site entered into the **General** section is shown in the example below. Note the **SLG Local Sip port** is set to **5060** and this information as well as the **SIP domain name** will be required in **Section 7**.

The screenshot shows the CS1000 Element Manager interface. The left sidebar contains a navigation tree with categories like UCM Network Services, System, and Customers. The main content area is titled "Node ID: 512 - SIP Line Configuration Details". It displays the "General" tab of the SIP Line Gateway Settings. Under "General", the "SIP domain name" is set to 10.10.97.187, "SLG endpoint name" is sip75, "SLG Group ID" is 512, "SLG Local Sip port" is 5060, and "SLG Local Tls port" is 5061. Under "Virtual Trunk Network Health Monitor", there is a checkbox for "Monitor IP addresses (listed below)" and a "Monitor IP" field with an "Add" button. The "SIP Line Gateway Settings" tab shows "Security policy" as "Security Disabled", "Number of byte re-negotiation" as 1, and "Options" as "Client authentication". A note at the bottom indicates required values. Buttons for Save and Cancel are at the bottom right.

## 7. Configure Ascom Wifi Myco Smartphone

This section describes how to access and configure Myco via the Device Manager. It is implied that the Wifi network has been configured and operational and the Ascom Unite Connectivity Manager box has an IP address assigned.

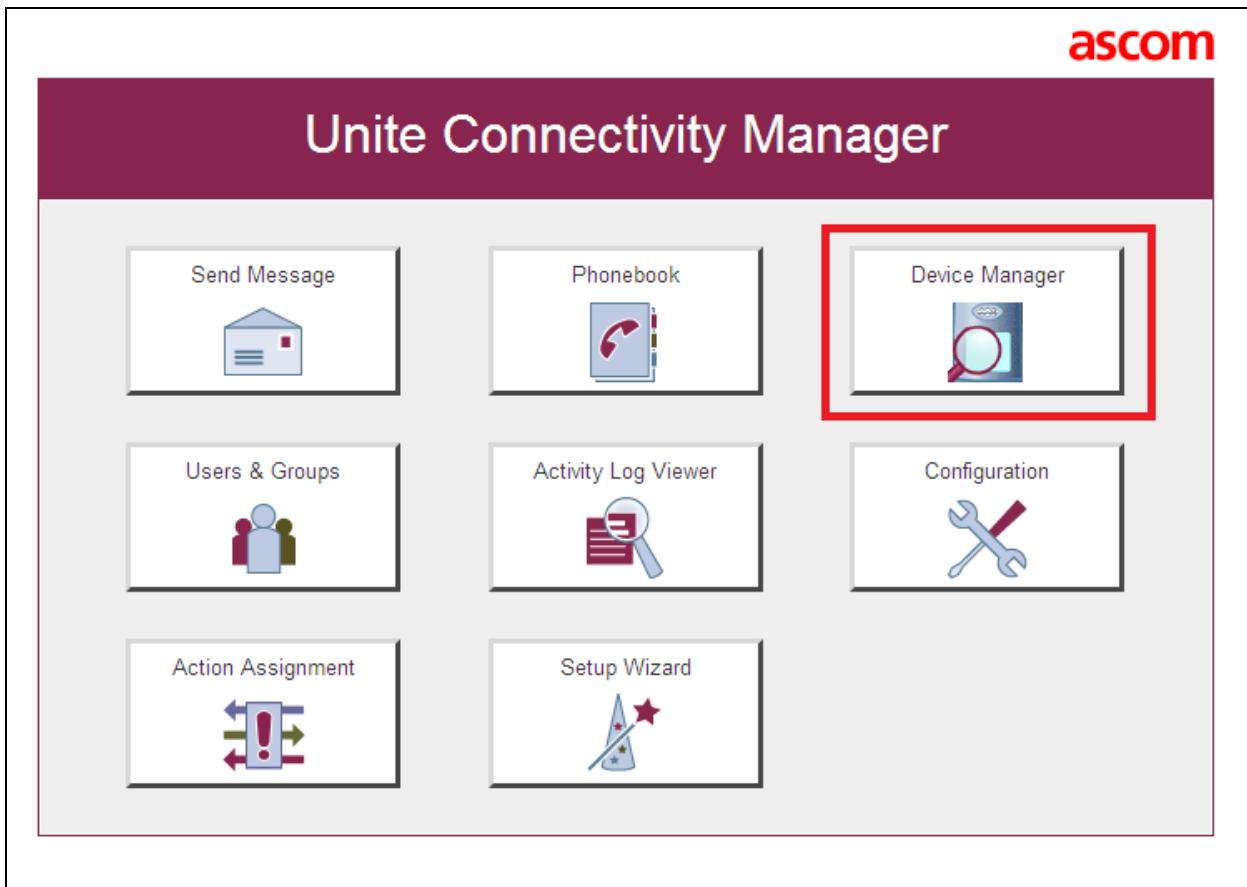

**Note:** The Wireless router configuration is outside the scope of these Application Notes.

Access the Unite Connectivity Manager box by typing the URL, <http://<ip address>> in a web browser (not shown).

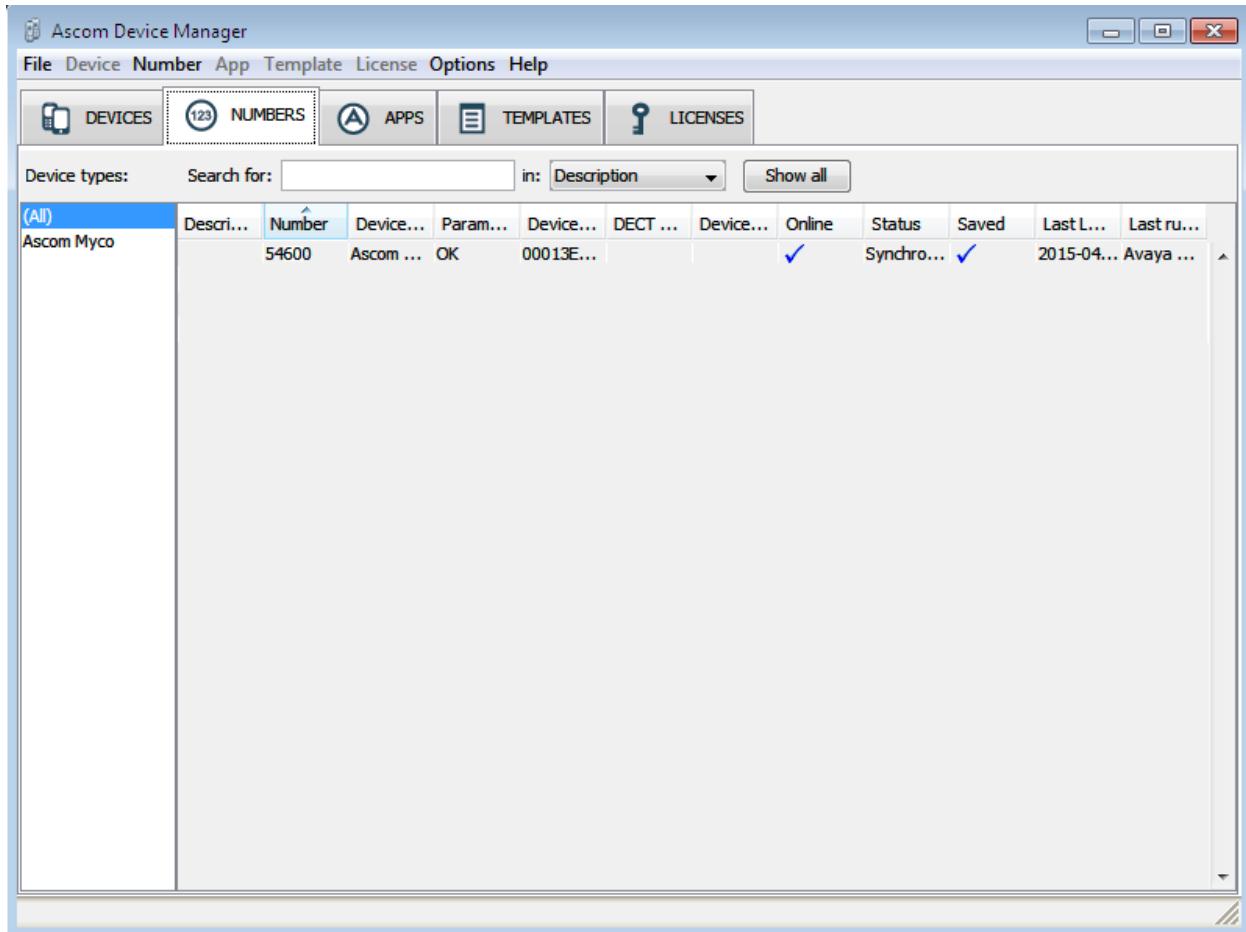

Screen below shows the login screen. Enter the required credentials in the **User name** and **Password** fields and click on **Log in**.

The main screen of **Unite Connectivity Manager** is seen as shown below. Click on the Device Manager application.

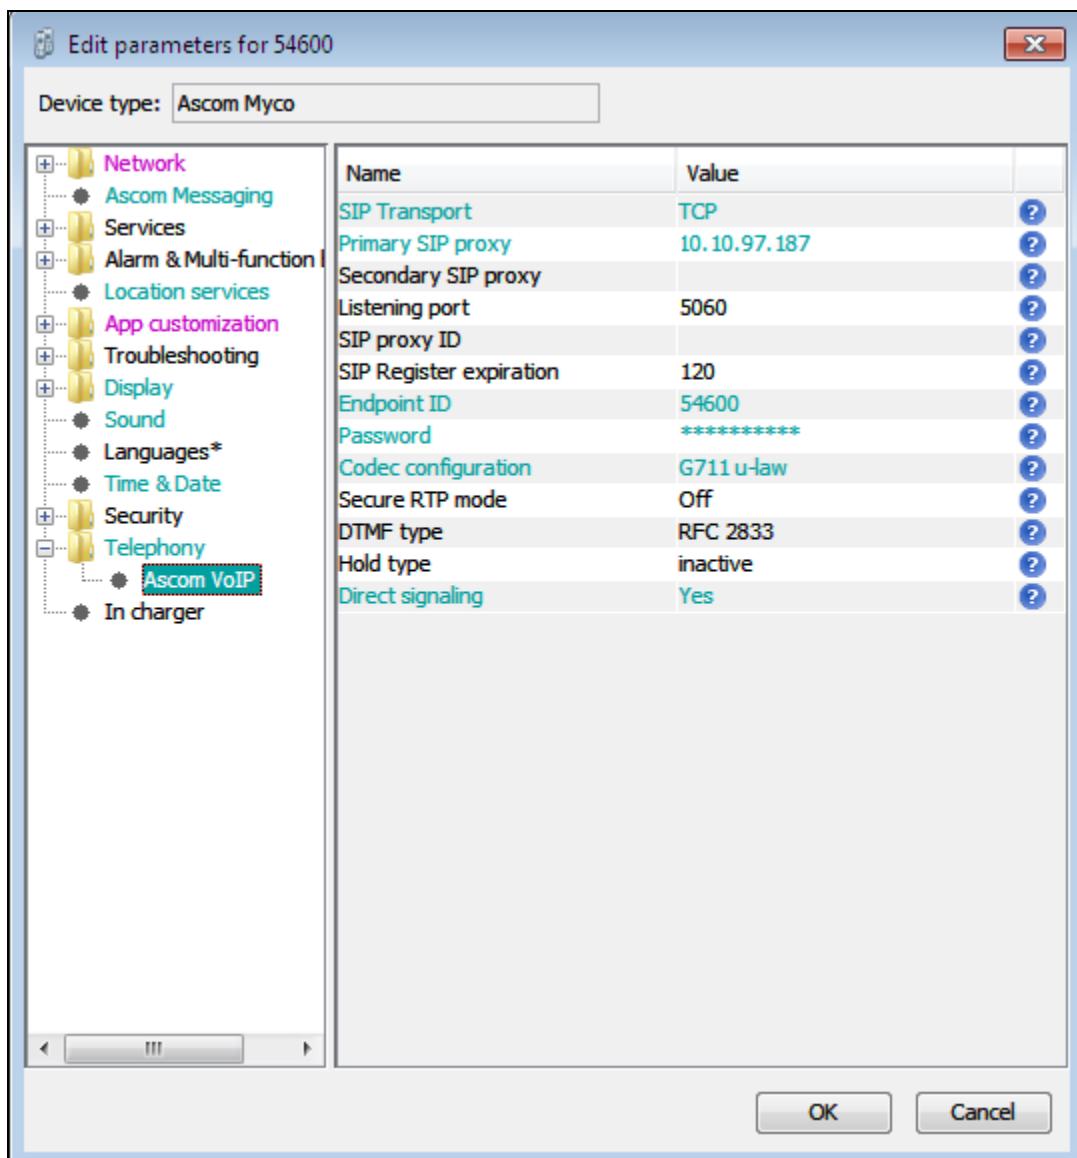

The **Ascom Device Manager** screen is seen as shown below. In the example below, a device with number *54600* is discovered. Double click on this number.

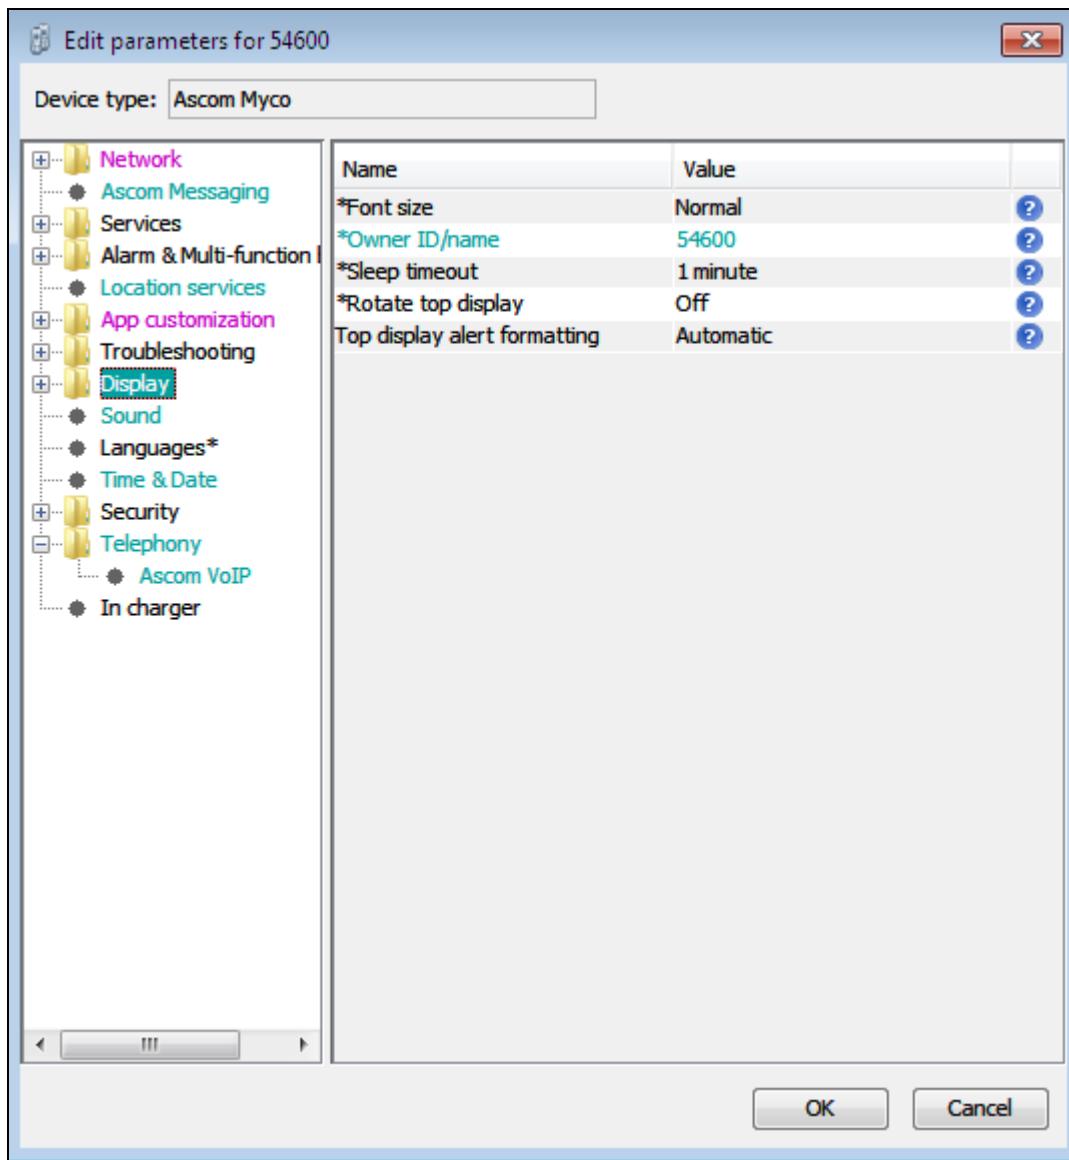

The **Edit parameters for 54600** screen is seen as shown below. Click on **Ascom VoIP** that is seen on the left hand side and configure the following values.

- **SIP Transport:** *TCP*
- **Primary SIP proxy:** *10.10.97.187*; this is the node IP address of the SLG as configured in **Section 6**
- **Listening port:** *5060*; this is the Local Sip port configured on the SLG in **Section 6**
- **Endpoint ID:** *54600*; this is the directory number configured in the Communication Server 1000 in **Section 5.3**
- **Password:** As defined in **Section 5.3**
- **Codec configuration:** In this example *G711 u-law* is selected
- **Direct signaling:** *Yes*

Retain default values for all other fields.

From the same screen as above, click on **Display** and configure the **Owner ID/name** field with the directory number configured, in this case *54600* as shown below. Retain default values for all other fields and click on **OK** to complete the configuration.

## 8. Verification Steps

This section provides the tests that can be performed to verify correct configuration of the Avaya and Ascom solution.

### 8.1. Verify Myco is registered with Avaya Communication Server 1000

Screen below shows an example of a SIP phone 54600, in this case the Myco as configured in **Section 5.3** registered to the SIPL Gateway.

```
[admin@sipl75 ~]$ slgSetShowByUID 54600

## 9. Conclusion

All of the executed test cases have passed and met the objectives outlined in the **Section 2.1**, with observations outlined in **Section 2.2**. The Ascom Wifi Myco smartphones 1.8.0 is considered to be in compliance with Communication Server 1000 Release 7.6.

## 10. Additional References

This section references documentation relevant to these Application Notes. The Avaya product documentation is available at <http://support.avaya.com> where the following documents can be obtained.
