AudioCodes Mediant 500Li with Avaya OneCloud Private – Issue 1.0

NOTICE

AudioCodes Mediant 500Li was compliance tested with Avaya OneCloud Private. AudioCodes Mediant 500Li is an analog VoIP gateway that connects legacy telephones and fax machines with IP telephony networks using SIP. AudioCodes Mediant 500Li registers analog devices to Avaya Aura® Session Manager through Avaya Session Border Controller as Office Workers or Remote Workers. As Office Workers, AudioCodes Mediant 500Li connects to Avaya OneCloud Private via a private circuit connection, such as a VPN. As Remote Workers, AudioCodes Mediant 500Li connects to Avaya Session Border Controller in Avaya OneCloud Private via the Internet. For the compliance test, an AudioCodes Mediant 500Li GE/GE/8FXS analog gateway was used.

The configuration of Avaya OneCloud Private is managed by Avaya. Avaya personnel in need of configuration details can look for documentation at <https://support.avaya.com> or contact Avaya DevConnect at devconnect@avaya.com.

Testing was conducted via the Avaya DevConnect Program.
