# **Application Notes for NICE Engage Platform R7.3 with Avaya Aura® Communication Manager R10.1 and Avaya Aura® Application Enablement Services R10.1 using Passive Station-Side VoIP Recording - Issue 1.0**

## **Abstract**

These Application Notes describe the configuration steps for the NICE Engage Platform to interoperate with Avaya Aura® Communication Manager R10.1, Avaya Aura® Session Manager R10.1, and Avaya Aura® Application Enablement Services R10.1 using Passive Station-Side VoIP recording to record telephone calls.

Readers should pay attention to **Section 2**, in particular the scope of testing as outlined in **Section 2.1** as well as the observations noted in **Section 2.2**, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

# 1. Introduction

These Application Notes describe the configuration steps for the NICE Engage platform R7.3 to interoperate with Avaya Aura® Communication Manager R10.1, Avaya Aura® Session Manager R10.1 and Avaya Aura® Application Enablement Services R10.1. The NICE Engage Platform was set up to use passive station-side VoIP recording with System Management Service (SMS) and the Telephony Services Application Programming Interface (TSAPI) via the Avaya Aura® Application Enablement Services (AES) to capture the audio and call details for call recording on various Communication Manager endpoints, listed in **Section 4**.

Passive station-side VoIP Recording (passive recording) uses port mirroring to record the RTP from each phone set. All phone sets to be recorded are plugged into the data switch, where these particular ports are mirrored to a port connected to the NICE Advanced Interactions Recording server. All of the RTP information from all of these phone sets is delivered to the sniffer port on the NICE Advanced Interactions Recording server. An additional Network Interface Card (NIC) is therefore required on the NICE Advanced Interactions Recording (AIR) server. This NIC is not configured to access the IP stack and has no IP configuration. This NIC connects into the mirrored port network that allows access to the phone network connection. This is effectively a hub environment. The promiscuous port needs to be on the same physical media path as any telephone endpoint that it is going to be recorded.

NICE Engage Platform provides the ability to record multi-channel interactions across the organization for regulatory compliance and to utilize these interactions for multiple business applications in order to extract insights and gain value. The platform tightly integrates with the telephony environment via CTI, APIs and SIP and stores the metadata in a single recording platform to ensure regulatory adherence and standardized workforce optimization processes across multiple channels. It provides comprehensive search tools and media retrieval, as well as a wide variety of Real-Time capabilities for PCI compliance and advanced applications.

The NICE Engage platform uses both TSAPI and SMS connections on AES. The TSAPI interface allows NICE Engage to capture the necessary call events and the SMS web service provides the ability to discover the status of resources on Communication Manager.

## 2. General Test Approach and Test Results

The interoperability compliance testing evaluated the ability of the NICE Engage Platform to carry out call recording in a variety of scenarios using passive recording with AES and Communication Manager. A range of Avaya endpoints were used in the compliance testing all of which are listed in **Section 4**.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in these DevConnect Application Notes included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with these Application Notes, the interface between Avaya systems and NICE Engage Platform did not include use of any specific encryption features as requested by NICE. The interface between the SIP phones and Session Manager were also unencrypted to allow NICE to capture the IP address information of the phone sets.

NICE used a “Generic SIP Mapper” interface for media location extraction of the SIP Phones that register to Session Manager. In order for this to operate and avoid configuration of fixed IPs, the signaling must be unencrypted. Any TLS messages on the network need to be decoded by the SIP Mapper and in order to decode these messages all TLS protocols use on the AES needed to be ticked, see **Section 6.5.2**.

**Note:** For Passive Station-Side VoIP recording the RTP is mirrored and sent to NICE Engage platform, therefore any RTP between the Avaya endpoints must not be encrypted.

## 2.1. Interoperability Compliance Testing

The interoperability compliance test included both feature functionality and serviceability testing. The feature functionality testing focused on placing and recording calls in different call scenarios with good quality audio recordings and accurate call records. The tests included:

- **Inbound/Outbound calls** – Test call recording for inbound and outbound calls to the Communication Manager to and from PSTN callers.
- **Hold/Transferred/Conference calls** – Test call recording for calls transferred to and in conference with PSTN callers.
- **Forwarded calls** - Test call recording for calls that were forwarded to various endpoints.
- **Feature calls** - Test call recording for calls that are parked or picked up using Call Park and Call Pickup.
- **Calls to Elite Agents** – Test call recording for calls to Communication Manager agents logged into Avaya Agent for Desktop.
- **Serviceability testing** - The behavior of NICE Engage Platform under different simulated LAN failure conditions.

## **2.2. Test Results**

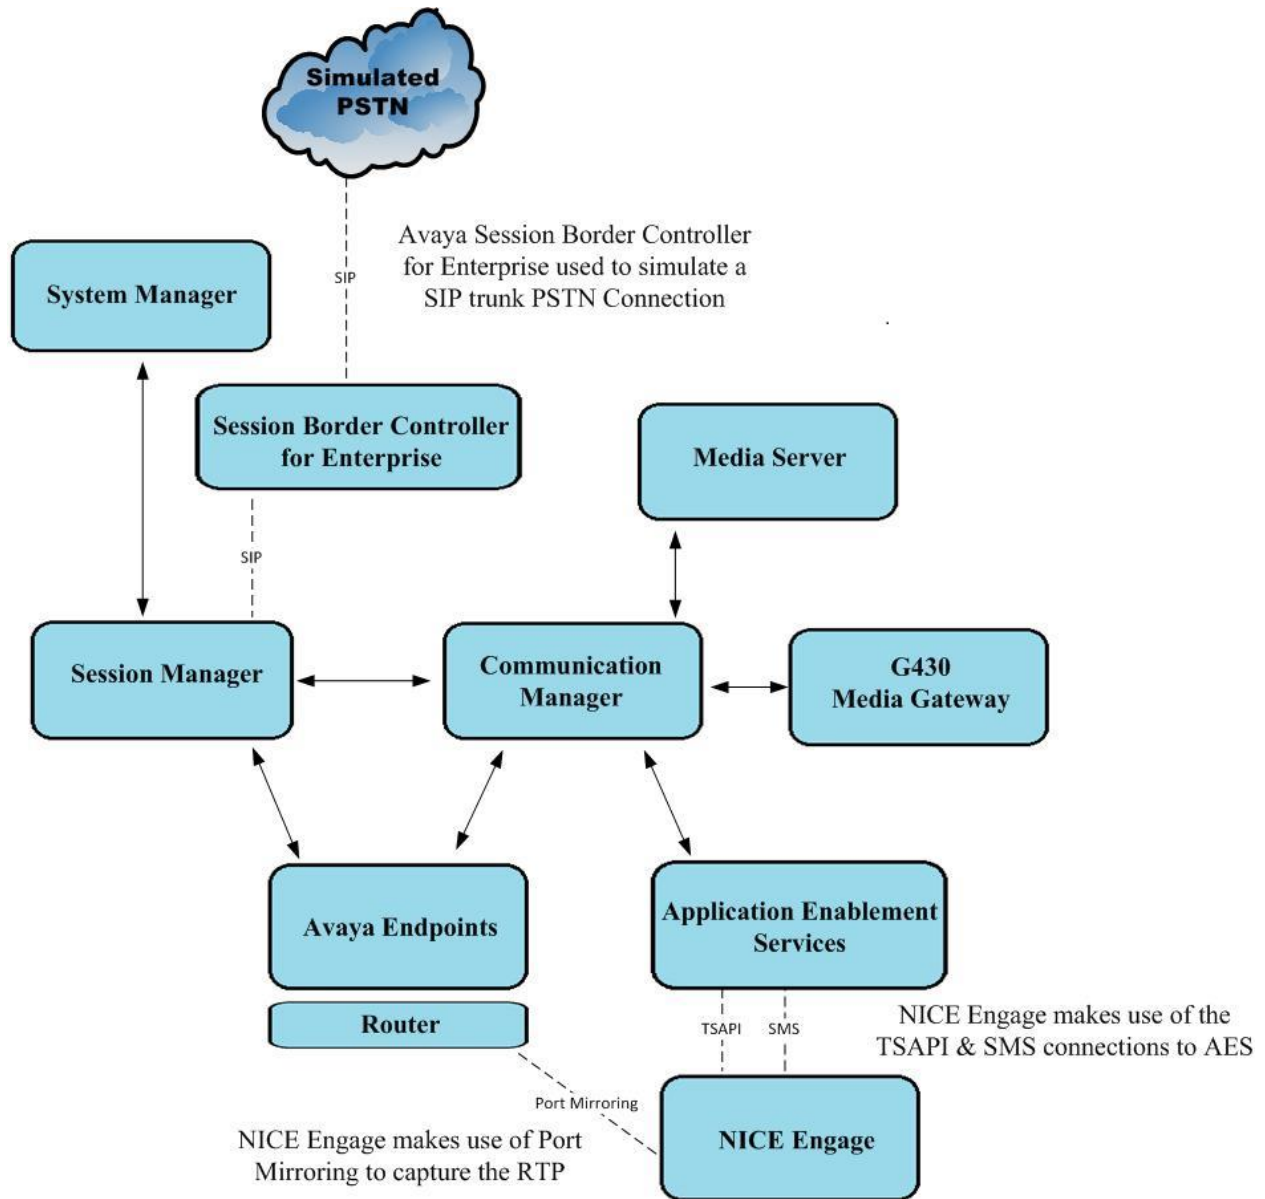

All functionality and serviceability test cases were completed successfully.

## **2.3. Support**

Technical support can be obtained for NICE Engage Platform from the website  
<https://www.nice.com/contact-us>

### 3. Reference Configuration

The configuration in **Figure 1** was used to compliance test NICE Engage Platform with the Avaya solution using passive recording to record calls. The data switch is configured to mirror ports connected to Avaya endpoints to one port connected to the NICE Advanced Interactions recorder sniffer port.

**Figure 1: Connection of NICE Engage Platform R7.3 with Avaya Aura® Communication Manager R10.1, Avaya Aura® Session Manager R10.1 and Avaya Aura® Application Enablement Services R10.1**

## 4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Aura® System Manager	System Manager 10.1.0.2 Build No. – 10.1.0.0.537353 Software Update Revision No: 10.1.0.2.0715160 Service Pack 2
Avaya Aura® Session Manager	Session Manager R10.1 Build No. – 10.1.0.2.1010219
Avaya Aura® Communication Manager	R10.1.0.2.0 – SP2 R020x.01.0.974.0 Update ID 01.0.974.0-27607
Avaya Aura® Application Enablement Services	10.1.0 Build 10.1.0.2.0.12-0
Avaya Aura® Media Server	10.1.0.101
Avaya G430 Media Gateway	42.7.0 /2
Avaya J100 Series Phones (SIP)	7.1.2.0.14
Avaya J100 Series Phones (H.323)	7.0.14.0.7
Avaya Vantage K175	3.1.1.1
Avaya Agent for Desktop (SIP)	2.0.6.23.3005
Avaya Workplace (SIP)	3.26.0.64
Avaya Session Border Controller for Enterprise (to facilitate simulated PSTN)	10.1.0
NICE Engage Platform <ul style="list-style-type: none"><li>- NICE Engage Application Server</li><li>- NICE Advanced Interactions Recording Server</li><li>- NICE Engage NDM Server</li></ul>	7.3

All equipment is running on virtual servers on VMware, except the NICE Advanced Interactions Recording Server, which is required to be installed on a server that could be plugged into the data switch and therefore is running on a Dell R610 with two NIC's, one of which connected to the mirrored ports.

## 5. Configure Avaya Aura® Communication Manager

The information provided in this section describes the configuration of Communication Manager relevant to this solution. For all other provisioning information such as initial installation and configuration, please refer to the product documentation in **Section 10**.

The configuration illustrated in this section was performed using Communication Manager System Administration Terminal (SAT).

### 5.1. Verify System Features

Use the **display system-parameters customer-options** command to verify that Communication Manager has permissions for features illustrated in these Application Notes. On **Page 3**, ensure that **Computer Telephony Adjunct Links?** is set to **y** as shown below.

<b>display system-parameters customer-options</b>		Page	4 of 12
OPTIONAL FEATURES			
Abbreviated Dialing Enhanced List?	y	Audible Message Waiting?	y
Access Security Gateway (ASG)?	y	Authorization Codes?	y
Analog Trunk Incoming Call ID?	y	CAS Branch?	n

ATMS?	y		
Attendant Vectoring?	y		
(NOTE: You must logoff & login to effect the permission changes.)			

### 5.2. Note procr IP Address for Avaya Aura® Application Enablement Services Connectivity

Display the Communication Manager (procr) IP address by using the command **display node-names ip** and note the IP address for the **procr** and the AES.

<b>display node-names ip</b>		Page	1 of 2
		IP NODE NAMES	
Name	IP Address		
SM100	10.10.40.12		
<b>aespri101x</b>	<b>10.10.40.16</b>		
default	0.0.0.0		
g450	10.10.40.15		
<b>procr</b>	<b>10.10.40.13</b>		

### 5.3. Configure Transport Link for Avaya Aura® Application Enablement Services Connectivity

To administer the transport link to AES, use the **change ip-services** command. On **Page 1** add an entry with the following values:

- **Service Type:** Should be set to **AESVCS**.
- **Enabled:** Set to **y**.
- **Local Node:** Set to the node name assigned for the procr in **Section 5.2**.
- **Local Port:** Retain the default value of **8765**.

change ip-services					Page	1 of	4
IP SERVICES							
Service	Enabled	Local	Local	Remote	Remote		
Type		Node	Port	Node	Port		
AESVCS	y	procr	8765				

Go to **Page 4** of the **ip-services** form and enter the following values:

- **AE Services Server:** Name obtained from the AES server, in this case **aespri101x**.
- **Password:** Enter a password to be administered on AES.
- **Enabled:** Set to **y**.

**Note:** The password entered for **Password** field must match the password on AES in **Section 6.2**. The **AE Services Server** should match the administered name for the AES server; this is created as part of the AES installation and can be obtained from the AES server by typing **uname -n** at the Linux command prompt.

change ip-services				Page 4 of 4
AE Services Administration				
Server ID	AE Services Server	Password	Enabled	Status
1:	aespri101x	*****	y	in use
2:				
3:				

### 5.4. Configure CTI Link for TSAPI Service

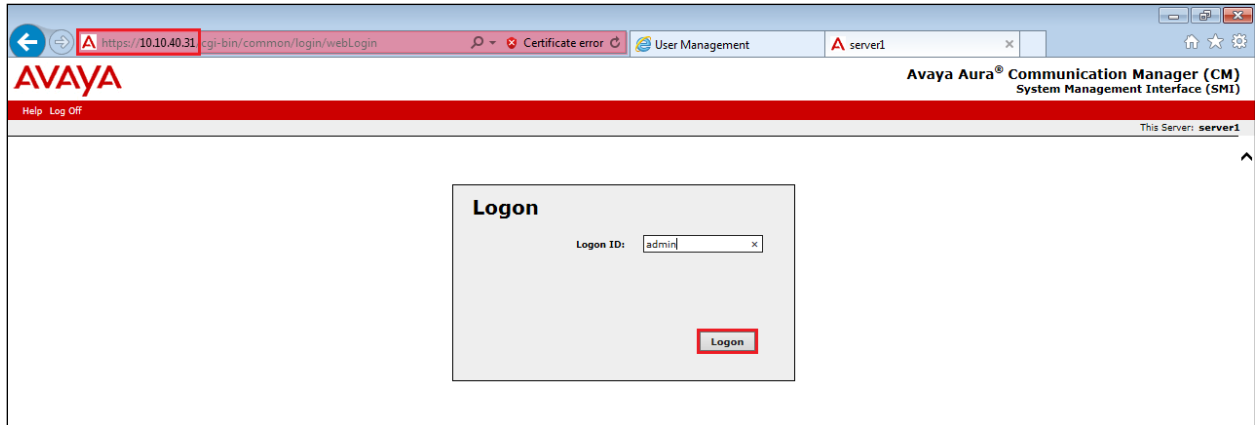

Add a CTI link using the **add cti-link n** command. Enter an available extension number in the **Extension** field. Enter **ADJ-IP** in the **Type** field, and a descriptive name in the **Name** field. Default values may be used in the remaining fields.

add cti-link 1		Page 1 of 3	
CTI LINK			
CTI Link: 1			
Extension: 1990			
Type: ADJ-IP			
		COR: 1	
Name: aespri101x			

## 5.5. Configure System Management Service user on Avaya Aura® Communication Manager

This user is created specifically for the SMS connection that NICE utilises for this specific type of call recording. Using a web browser navigate to the Communication Manager IP Address. Enter the proper credentials and click on Logon.

The screenshot shows a web browser window with the address bar displaying `https://10.10.40.31/cgi-bin/common/login/webLogin`. The page title is "Avaya Aura® Communication Manager (CM) System Management Interface (SMI)". The main content area features a "Logon" box with a "Logon ID:" field containing the text "admin" and a "Logon" button.

Once logged in click on **Administration** at the top of the page and select **Server (Maintenance)** from the drop-down menu.

The screenshot shows the main page of the Avaya Aura Communication Manager (CM) System Management Interface (SMI). The page has a red header with the Avaya logo and "Avaya Aura® Communication Manager (CM) System Management Interface (SMI)". Below the header is a navigation menu with "Administration", "Licensing", and "Server (Maintenance)". The main content area displays "System Management Interface", "© 2001-2013 Avaya Inc. All Rights Reserved.", and sections for "Copyright" and "Third-party Components".

In the left window navigate to **Security → Administrator Accounts**. In the main window select **Add Login** and **Privileged Administrator** as shown below. Click on **Submit** when finished.

The screenshot displays the Avaya Administration web interface. The top navigation bar includes 'Help', 'Log Off', and 'Administration'. Below this, the breadcrumb trail shows 'Administration / Server (Maintenance)'. The left sidebar contains a navigation menu with categories: Alarms, SNMP, Diagnostics, Server, Server Configuration, Server Upgrades, Data Backup/Restore, and Security. The 'Security' category is expanded, and 'Administrator Accounts' is highlighted. The main content area is titled 'Administrator Accounts' and contains the following text: 'The Administrator Accounts SMI pages allow you to add, delete, or change administrator logins and Linux groups.' Below this, the 'Select Action:' section shows the 'Add Login' and 'Privileged Administrator' radio buttons selected. Other options include 'Unprivileged Administrator', 'SAT Access Only', 'Web Access Only', 'CDR Access Only', 'Business Partner Login (dadmin)', 'Business Partner Craft Login', and 'Custom Login'. There are also dropdown menus for 'Change Login', 'Remove Login', 'Lock/Unlock Login', 'Add Group', and 'Remove Group'. At the bottom, there are 'Submit' and 'Help' buttons.

## 6. Configure Avaya Aura® Application Enablement Services

This section provides the procedures for configuring Application Enablement Services. The procedures fall into the following areas:

- Verify Licensing
- Create Switch Connection
- Administer TSAPI Link
- Identify Tlinks
- Enable TSAPI Ports
- Create CTI User
- Configure Security
- Restart AE Server
- Configure the System Management Service on Avaya Aura® Application Enablement Services

### 6.1. Verify Licensing

To access the AES Management Console, enter **https://<ip-addr>** as the URL in an Internet browser, where <ip-addr> is the IP address of AES. At the login screen displayed, log in with the appropriate credentials and then select the **Login** button.

The screenshot shows the Avaya Application Enablement Services Management Console login interface. At the top left is the Avaya logo. To its right, the text "Application Enablement Services" is displayed in a large, bold font, with "Management Console" in a smaller font below it. A red horizontal bar spans the width of the page, with a "Help" link in the top right corner. In the center of the page is a light gray rectangular box containing the text "Please login here:" followed by a "Username" label and a text input field. Below the input field is a "Continue" button. At the bottom of the page, a red horizontal bar is present, and below it, the copyright notice "Copyright © 2009-2022 Avaya Inc. All Rights Reserved." is displayed.

The Application Enablement Services Management Console appears displaying the **Welcome to OAM** screen (not shown). Select **AE Services** and verify that the TSAPI Service is licensed by ensuring that **TSAPI Service** is in the list of **Services** and that the **License Mode** is showing **NORMAL MODE**. If not, contact an Avaya support representative to acquire the proper license for your solution.

### 6.3. Administer TSAPI link

From the Application Enablement Services Management Console, select **AE Services** → **TSAPI** → **TSAPI Links**. Select **Add Link** button as shown in the screen below.

The screenshot shows the 'AE Services | TSAPI | TSAPI Links' management console. On the left is a navigation pane with a tree structure: 'AE Services' is expanded, showing sub-items 'CVLAN', 'DLG', 'DMCC', 'SMS', 'TSAPI' (expanded), and 'TSAPI Properties'. Under 'TSAPI', 'TSAPI Links' is selected. The main content area is titled 'TSAPI Links' and contains a table with two columns: 'Link' and 'Switch Connection'. Below the table are three buttons: 'Add Link', 'Edit Link', and 'Delete Link'.

AE Services   TSAPI   TSAPI Links					
<b>▼ AE Services</b>	<b>TSAPI Links</b>				
▶ CVLAN					
▶ DLG					
▶ DMCC					
▶ SMS					
<b>▼ TSAPI</b>					
▪ <b>TSAPI Links</b>					
▪ TSAPI Properties					
<table border="1"><thead><tr><th>Link</th><th>Switch Connection</th></tr></thead><tbody><tr><td><input type="button" value="Add Link"/></td><td><input type="button" value="Edit Link"/> <input type="button" value="Delete Link"/></td></tr></tbody></table>		Link	Switch Connection	<input type="button" value="Add Link"/>	<input type="button" value="Edit Link"/> <input type="button" value="Delete Link"/>
Link	Switch Connection				
<input type="button" value="Add Link"/>	<input type="button" value="Edit Link"/> <input type="button" value="Delete Link"/>				

On the **Add TSAPI Links** screen (or the **Edit TSAPI Links** screen to edit a previously configured TSAPI Link as shown below), enter the following values:

- **Link:** Use the drop-down list to select an unused link number.
- **Switch Connection:** Choose the switch connection **cm101x**, which has already been configured in **Section 6.2** from the drop-down list.
- **Switch CTI Link Number:** Corresponding CTI link number configured in **Section 5.4** which is **1**.
- **ASAI Link Version:** Version **12** was used for compliance testing but the latest version available can be chosen.
- **Security:** This can be left at the default value of **both**. An unencrypted TSAPI link was used.

Once completed, select **Apply Changes**.

Another screen appears for confirmation of the changes made. Choose **Apply**.

**Apply Changes to Link**  

Warning! Are you sure you want to apply the changes?  
These changes can only take effect when the TSAPI server restarts.

 **Please use the Maintenance -> Service Controller page to restart the TSAPI server.**

When the TSAPI Link is completed, it should resemble the screen below.

TSAPI Links				
Link	Switch Connection	Switch CTI Link #	ASAI Link Version	Security
<input checked="" type="radio"/> 1	cm101x	1	12	Both
<input type="button" value="Add Link"/> <input type="button" value="Edit Link"/> <input type="button" value="Delete Link"/>				

## 6.4. Identify Tlinks

Navigate to **Security** → **Security Database** → **Tlinks**. Verify the value of the **Tlink Name**. This will be needed to configure the NICE Engage Platform in **Section 7.1**. The Tlink for the unencrypted TSAPI link was used.

## 6.5. Configure Networking Ports

Navigate to **Networking** in the left window, both the TSAPI and TLS port configurations can be observed from here.

### 6.5.1. Enable TSAPI Ports

To ensure that TSAPI ports are enabled, navigate to **Networking → Ports**. Ensure that the TSAPI ports are set to **Enabled** as shown below.

Networking   Ports				
<b>AE Services</b>				
<b>Communication Manager Interface</b>

	Local UDP Port Max	<input type="text" value="29999"/>		
	Server Media			Enabled Disabled
				<input checked="" type="radio"/> <input type="radio"/>

## 6.5.2. Enable TLS Ports

In order to allow the NICE Generic SIP Mapper to decode TLS messages support for all three TLS protocols needed to be ticked.

Navigate to **TCP/TLS Settings** as shown. To ensure that all TLS protocols are supported, tick the boxes as shown below. Click on **Apply Changes**.

The screenshot shows the 'Networking | TCP / TLS Settings' configuration page. On the left is a navigation menu with the following items: AE Services, Communication Manager Interface, High Availability, Licensing, Maintenance, Networking (expanded), AE Service IP (Local IP), Network Configure, Ports, TCP/TLS Settings (highlighted with a red box), Security, Status, User Management, Utilities, and Help. The main content area is titled 'TCP / TLS Settings' and contains the following sections:

- TLSv1 Protocol Configuration:** Three checkboxes are listed, all of which are checked and highlighted with a red box:
  - ☒ Support TLSv1.0 Protocol
  - ☒ Support TLSv1.1 Protocol
  - ☒ Support TLSv1.2 Protocol
- TCP Retransmission Count:** Two radio button options are present:
  - ☒ Standard Configuration (15)
  - ☐ TSAPI Routing Application Configuration (6)

At the bottom of the main content area are three buttons: 'Apply Changes', 'Restore Defaults', and 'Cancel Changes'. Below the buttons, there is a note and a warning:

Note: A smaller TCP Retransmission Count reduces the amount of time that the AE Services server waits for a TCP acknowledgement. Select the Standard Configuration setting unless this AE Services server is used by TSAPI routing applications.

**Warning:** This setting applies to all TCP and TLS sockets on the AE Services Server and so it should be used with caution.

## 6.6. Create CTI User

A User ID and password needs to be configured for the NICE Engage Platform to communicate with the Application Enablement Services server. Navigate to the **User Management** → **User Admin** screen then choose the **Add User** option.

The screenshot displays the 'User Management | User Admin' interface. On the left is a navigation sidebar with a red header bar. The sidebar contains the following menu items: 'AE Services', 'Communication Manager Interface', 'High Availability', 'Licensing', 'Maintenance', 'Networking', 'Security', 'Status', 'User Management' (expanded), 'Service Admin', 'User Admin' (selected), 'Add User', 'Change User Password', 'List All Users', 'Modify Default Users', 'Search Users', 'Utilities', and 'Help'. The main content area on the right has a title 'User Admin' and a description: 'User Admin provides you with the following options for managing AE Services users:'. Below this description is a bulleted list of options: 'Add User', 'Change User Password', 'List All Users', 'Modify Default User', and 'Search Users'.

User Management   User Admin	
<ul style="list-style-type: none"><li>▶ AE Services</li><li>▶ Communication Manager Interface</li><li>High Availability</li><li>▶ Licensing</li><li>▶ Maintenance</li><li>▶ Networking</li><li>▶ Security</li><li>▶ Status</li><li>▼ User Management<ul style="list-style-type: none"><li>▶ Service Admin</li><li>▼ User Admin<ul style="list-style-type: none"><li>▪ Add User</li><li>▪ Change User Password</li><li>▪ List All Users</li><li>▪ Modify Default Users</li><li>▪ Search Users</li></ul></li></ul></li><li>▶ Utilities</li><li>▶ Help</li></ul>	<h3>User Admin</h3> <p>User Admin provides you with the following options for managing AE Services users:</p> <ul style="list-style-type: none"><li>• Add User</li><li>• Change User Password</li><li>• List All Users</li><li>• Modify Default User</li><li>• Search Users</li></ul>

In the **Add User** screen shown below, enter the following values:

- **User Id** - This will be used by the NICE Engage Platform setup in **Section 7.1**.
- **Common Name** and **Surname** - Descriptive names need to be entered.
- **User Password** and **Confirm Password** - This will be used with NICE Engage Platform setup in **Section 7.1**.
- **CT User** - Select **Yes** from the drop-down menu.

<b>High Availability</b>	* User Id	nice1
▶ <b>Licensing</b>	* Common Name	nice1
▶ <b>Maintenance</b>	* Surname	nice1
▶ <b>Networking</b>	User Password	.....
▶ <b>Security</b>	Confirm Password	.....
▶ <b>Status</b>	Admin Note	
▼ <b>User Management</b>	Avaya Role	None ▼
▶ Service Admin	Business Category	
▼ <b>User Admin</b>	Car License	
▪ Add User	CM Home	
▪ Change User Password	Css Home	
▪ <b>List All Users</b>	CT User	Yes ▼
▪ Modify Default Users	Department Number	
▪ Search Users	Display Name	
▶ <b>Utilities</b>	Employee Number	
▶ <b>Help</b>	Employee Type	
	Enterprise Handle	

Scroll down and click on **Apply Changes** (not shown).

## 6.7. Configure Security

The CTI user permissions and the database security are set under **Security Database**.

### 6.7.1. Configure Database Control

The security database can be set differently depending on the requirements of the customer in question. For compliance testing, the DevConnect lab was setup as shown below, however this may be changed by opening **Control** and ticking the boxes shown.

**Note:** Since the CTI user was given unrestricted access, as per **Section Error! Reference source not found.**, these values set here do not impact the overall setup.

<div><div>▶ AE Services</div><div>▶ Communication Manager Interface</div><div>High Availability</div><div>▶ Licensing</div><div>▶ Maintenance</div><div>▶ Networking</div><div>▼ Security</div><div>▶ Account Management</div><div>▶ Audit</div><div>▶ Certificate Management</div><div>Enterprise Directory</div><div>▶ Host AA</div><div>▶ PAM</div><div>▼ Security Database</div><div>▪ Control</div><div>CTI Users</div></div>	<div>SDB Control for DMCC, TSAPI, JTAPI and Telephony Web Services</div> <div><div><input type="checkbox"/> Enable SDB for DMCC Service</div><div><input checked="" type="checkbox"/> Enable SDB for TSAPI Service, JTAPI and Telephony Web Services</div></div> <div>Apply Changes</div>
--	---

**Note:** The AES Security Database (SDB) provides the ability to control a user’s access privileges. The SDB stores information about Computer Telephony (CT) users and the devices they control. The ~~DMCC service, the~~ TSAPI service, and Telephony Web Services use this information for permission checking. Please look to **Section Error! Reference source not found.** for more information on this.

### 6.7.2. Associate Devices with CTI User

Navigate to **Security** → **Security Database** → **CTI Users** → **List All Users**. Select the CTI user added in **Section 6.6** and click on **Edit Users**.

User ID	Common Name	Worktop Name	Device ID
<input checked="" type="radio"/> nice1	nice1	NONE	NONE
<input type="radio"/> paul1	paul1	NONE	NONE
<input type="radio"/> paul2	paul2	NONE	NONE
<input type="radio"/> sytel	Sytel	NONE	NONE

[Edit](#) [List All](#)

In the main window ensure that **Unrestricted Access** is ticked. Once this is done click on **Apply Changes**.

**Edit CTI User**

## 6.9. Configure the System Management Service on Avaya Aura® Application Enablement Services

From the AE Services Management Console main menu, select **AE Services** → **SMS** → **SMS Properties**. The following list describes the SMS configuration settings and provides guidelines for configuring SMS.

- **Default CM Host Address** — SMS will attempt to connect to this Communication Manager host address, as long as no host address is explicitly specified in the authorization header of a client request. If this field is blank, all SMS requests must explicitly include the target Communication Manager host address.
- **Default CM Admin Port** — By default the System Management Service will use **5022** to connect to a Communication Manager server.
- **CM Connection Protocol** — Use the default **SSH** port. The default TUI (or SAT) ports on Communication Manager are **SSH Port=5022 Telnet Port=5023**.
- **CM Proxy Trace Logging** — Use the default **NONE**, unless debugging.
- **Max Sessions per CM** — This is a safety setting that prevents SMS from consuming all of the TUI processes on Communication Manager. By default, the setting is **5**.

Use default settings for all other fields, as shown below.

The screenshot displays the 'AE Services | SMS | SMS Properties' configuration page. On the left is a navigation tree with 'AE Services' expanded, showing sub-items like CVLAN, DLG, DMCC, SMS (expanded), TSAPI, TWS, Communication Manager Interface, High Availability, Licensing, Maintenance, and Networking. The 'SMS Properties' sub-item is selected. The main area shows the following configuration fields:

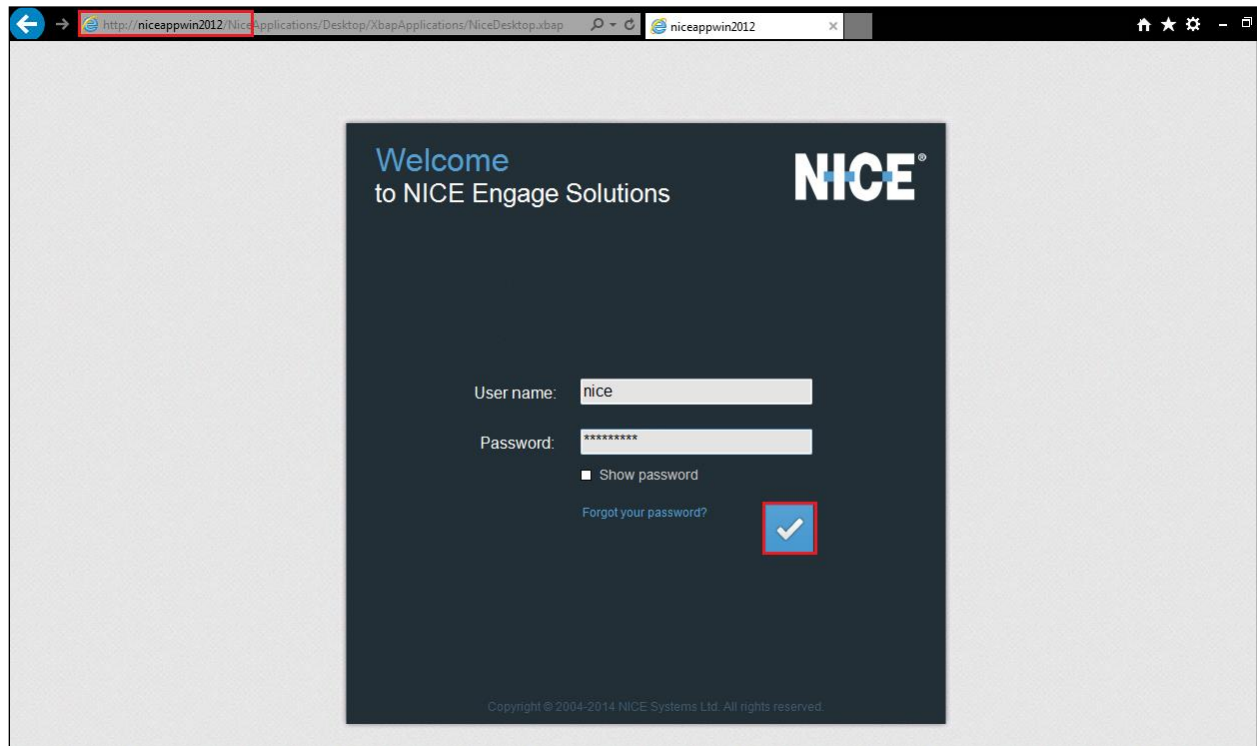

SMS Properties	
Default CM Host Address	10.10.40.13
Default CM Admin Port	5022
CM Connection Protocol	SSH
SMS Logging	NORMAL
SMS Log Destination	apache
CM Proxy Trace Logging	NONE
Max Sessions per CM	5
Proxy Shutdown Timer	1800 seconds
SAT Login Keepalive	180 seconds
CM Terminal Type	OSSIZ
Proxy Log Destination	/var/log/avaya/aes/ossicm.log

At the bottom of the configuration area are three buttons: 'Apply Changes', 'Restore Defaults', and 'Cancel'.

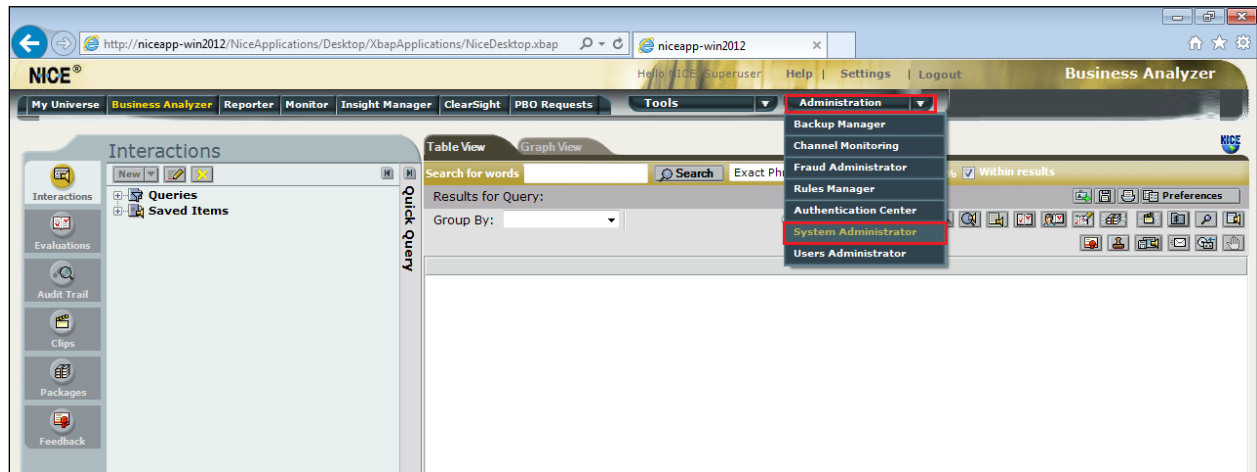

## 7. Configure NICE Engage Platform

The installation of NICE Engage Platform is usually carried out by an engineer from NICE and is outside the scope of these Application Notes. For information on the installation of the NICE Engage Platform contact NICE as per the information provided in **Section 2.3**.

The following sections will outline the process involved in connecting the NICE Engage Platform to the Avaya solution. All configuration of the NICE Engage Platform for connection with the AES is performed using a web browser connecting to the NICE Engage Application Server. Open a web browser as shown navigate to **Error! Hyperlink reference not valid.** as shown below and enter the proper credentials and click on **Login**.

Once logged in, expand the **Administration** dropdown menu and click on **System Administrator** as highlighted.

Before any changes can be made, switch to **Technician Mode** by clicking into **Settings** at the top of the screen as shown below.

## 7.1. New CTI Connection

Navigate to **Master Site** → **CTI Integration** in the left window then right-click on CTI Integration and select **New CTI Connection** as shown below.

The **New CTI Connection Wizard** is opened, and this will go through the 17 steps required to set up the connection to the AES for Passive Station Side VoIP recording. Click on **Next** to continue.

The value for Regular Interactions Center is a value that was already created during the installation of the NICE Engage Platform. This value is therefore pre-chosen for the CTI connection being created below.

The **Telephony Switch** must be selected, and this will be **Avaya CM**. Enter a suitable name for this **Switch Name**. Click on **Next** to continue.

New CTI Connection

Set New CTI Connection Wizard Stage 2 of 17

Interactions Center Switch

Attach CTI to Interactions Center Server:

- ☒ Regular Interactions Center: IC (nice-app)
- ☐ Interactions Center Cluster:
- ☐ Use existing Telephony Switch: Avaya CM
- ☒ Define new Telephony Switch:

Switch Type: Avaya CM

Switch Name: Avaya CM Passive

Agent Logon Mode

Interactions Centers should accept agent logins on this switch if agent logins:

- ☒ To the same station again
- ☒ To more than one station
- ☒ To a station another agent is logged into

Back Next Cancel

Select **AES TSAPI** for the **Avaya CM CTI Interface**, ensure that **VoIP Mapping** is ticked and select the **AES SMS** from the dropdown menu. Ensure that **Additional VoIP Mapping** is ticked, and that **Generic SIP Mapper** is chosen from the dropdown. Click on **Next** to continue.

The 'General Interface Info' dialog box contains an 'Interface Connection Details' section. It has a checkbox for 'Display Read Only Information' and a note that 'Mandatory fields are marked in bold'. Below this is a table with two columns: 'Parameter' and 'Value'. The table contains four rows: 'ServerName' with value 'AVAYA#CM101X#CSTA#AESPRI101X', 'LoginID' with value 'nice1', 'Password' with a masked value '\*\*\*\*\*', and 'UseWarmStandBy' with value 'No'. Below the table is a 'Description' field with the text 'Server connection name.' and an 'Additional Interface Parameters' section at the bottom.

Parameter	Value
<b>ServerName</b>	<b>AVAYA#CM101X#CSTA#AESPRI101X</b>
<b>LoginID</b>	<b>nice1</b>
<b>Password</b>	<b>*****</b>
<b>UseWarmStandBy</b>	<b>No</b>

The values below must be filled in by double-clicking on each **Parameter**.

The 'Set New CTI Connection Wizard Stage 4 of 17' dialog box shows the 'VoIP Mapping' section. It contains a 'VoIP Mapping Interface Details' section with an 'Interface Connection Details' table. The table has two columns: 'Parameter' and 'Value'. The table contains four rows: 'AESVersion' with value 'Below 4.1', 'SmsHostIpAddress', 'SmsSessionMode' with value 'BASIC\_AUTHORIZATION', and 'SmsRequestTimeoutInSec' with value '30'. The 'AESVersion' row is highlighted in blue. Below the table is a 'Description' field with the text 'AES Version.' and an 'Additional Interface Parameters' section at the bottom. At the bottom of the dialog are 'Back', 'Next', and 'Cancel' buttons.

Parameter	Value
<b>AESVersion</b>	<b>Below 4.1</b>
<b>SmsHostIpAddress</b>	
<b>SmsSessionMode</b>	<b>BASIC_AUTHORIZATION</b>
<b>SmsRequestTimeoutInSec</b>	<b>30</b>

Enter the **Value** for the **AESVersion**. Click on **OK**.

The screenshot shows the 'Set New CTI Connection' dialog box with the 'Interface Connection Parameter' tab selected. The 'Set Parameter Value' sub-dialog is open for the 'AESVersion' parameter. The 'Value' dropdown is set to '4.1 and Above'. The 'OK' button is highlighted with a red box. The 'Additional Interface Parameters' section is visible at the bottom.

Click on **IP Address for Devices**. This will add the address range for the IP addresses picked up from the SMS connection to the AES.

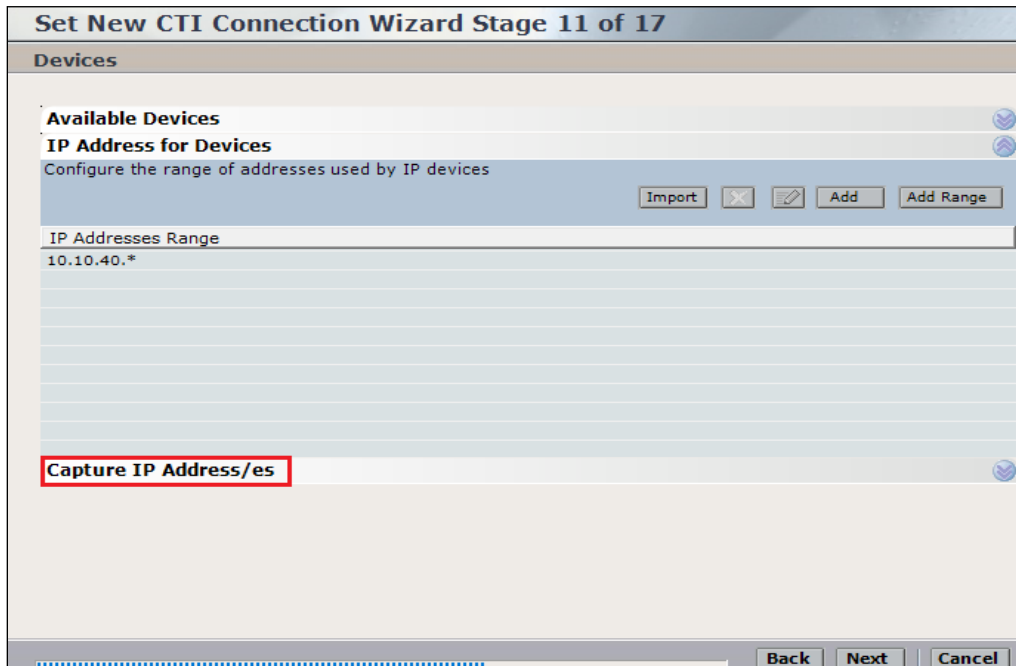

[illegible]

Click on **Add Range** to add the **Device IP Range**. The range is added in the form of x.x.x.\* as shown below where the range is from 10.10.40.1 to 10.10.40.254. Click on **OK**.

The screenshot shows the "Set New CTI Connection Wizard Stage 11 of 17". The main window has a title bar "Set New CTI Connection Wizard Stage 11 of 17" and a menu bar "Devices". Below the menu bar is a section titled "Available Devices" with a sub-section "IP Address for Devices". A message says "Configure the range of addresses used by IP devices". There are four buttons: "Import", "X", "Add", and "Add Range" (highlighted with a red box). Below the buttons is a table with one column labeled "IP Addresses Range". A modal dialog titled "Device IP Range" is open over the table. It has a close button (X) in the top right corner. The dialog has a header "Device IP Range" and a sub-header "Add". Below the sub-header is a label "IP :" followed by a text input field containing "10 . 10 . 40 | . \*". At the bottom of the dialog are two buttons: "OK" and "Cancel". The background window also has a "Capture IP Address/es" label at the bottom left and navigation buttons "Back", "Next", and "Cancel" at the bottom right.

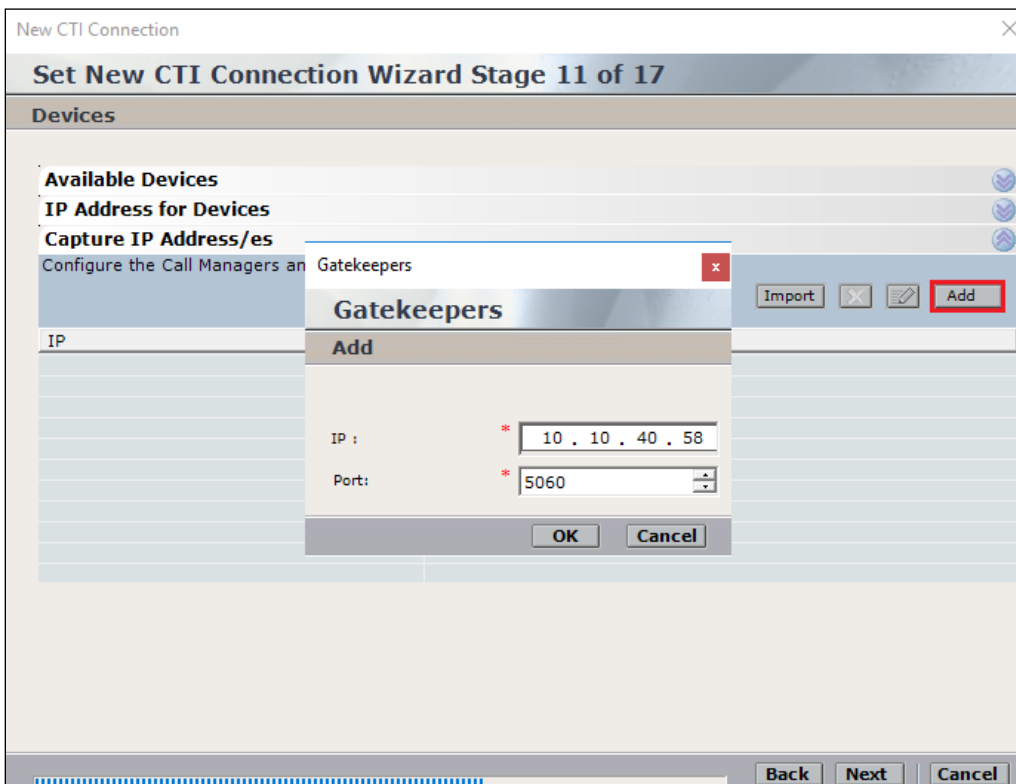

Select **Capture IP Address/es**. This will add the information required for the Generic SIP mapper to capture the IP addresses information of the SIP phones.

The screenshot shows the 'Set New CTI Connection Wizard Stage 11 of 17' window. The 'Devices' section is active, showing 'Available Devices' and 'IP Address for Devices'. The 'IP Address for Devices' section has a sub-section 'Capture IP Address/es' which is highlighted with a red box. The 'IP Addresses Range' table shows a single entry '10.10.40.\*'. The 'Add' button is highlighted with a red box.

Click on **Add** and enter the Session Manager's IP address and the SIP **Port 5060**.

The screenshot shows the 'Set New CTI Connection Wizard Stage 11 of 17' window with the 'Capture IP Address/es' section highlighted. A 'Gatekeepers' dialog box is open, showing the 'Add' button highlighted with a red box. The dialog box has fields for 'IP' (10.10.40.58) and 'Port' (5060). The 'Add' button is highlighted with a red box.

Click on **Next** to continue.

It is optional, but for better analysis tick on **Call Flow Analysis** and click on **Next** to continue.

The screenshot shows a window titled "New CTI Connection" with a close button (X) in the top right corner. The main title bar reads "Set New CTI Connection Wizard Stage 13 of 17". Below this is a section titled "Optional". The text inside says: "Select optional features relevant to integration. Some options may require further configuration." There are four checkboxes listed: "SIP Trunk Correlation", "Rejected Devices", "Filter Calls", and "Call Flow Analysis". The "Call Flow Analysis" checkbox is checked. At the bottom of the window, there are three buttons: "Back", "Next", and "Cancel". A progress bar is visible at the very bottom.

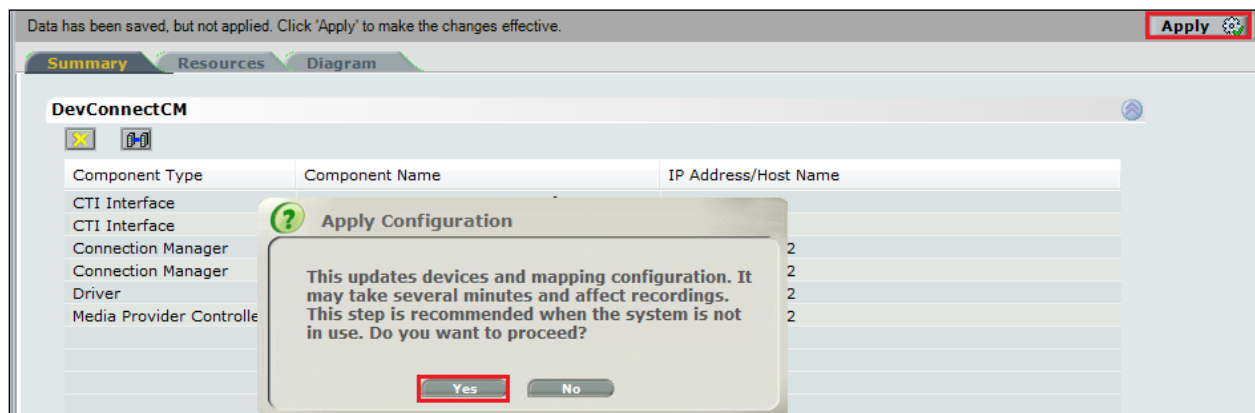

Select a different **Port** number as shown below **62095** is chosen simply because **62094** is already in use.

The screenshot shows a window titled "New CTI Connection" with a close button (X) in the top right corner. The main title bar reads "Set New CTI Connection Wizard Stage 16 of 17". Below this is a section titled "Requirements". The text inside says: "The Interactions Center server selected already has a Connection Manager. Create a new Connection Manager, or select an existing one." There are two radio button options: "Create a new Connection Manager" (which is selected) and "Select available Connection Manager". Under "Create a new Connection Manager", there is a "Port:" label and a text box containing "62095". Under "Select available Connection Manager", there is a "Ports in use:" label and a list box containing "62094". At the bottom of the window, there are three buttons: "Back", "Next", and "Cancel". A progress bar is visible at the very bottom.

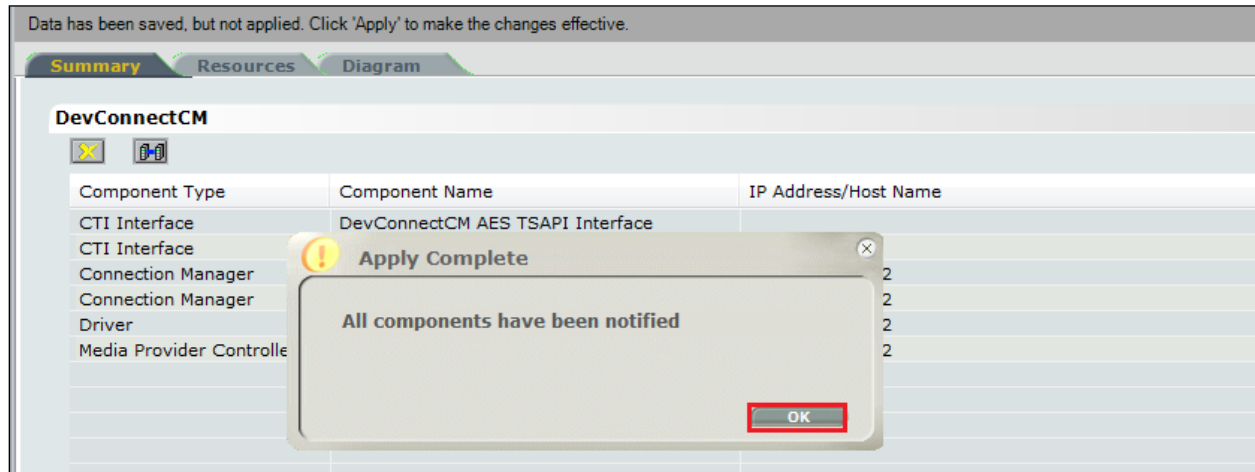

Click on **Finish** to complete the New CTI Wizard.

Click on **Apply** at the top right of the screen to save the new connection and click on **Yes** to proceed.

The following shows that the save was successful. Click on **OK** to continue.

From the NICE Application Server, open **Services** and restart the **NICE Integration Dispatch Service**.

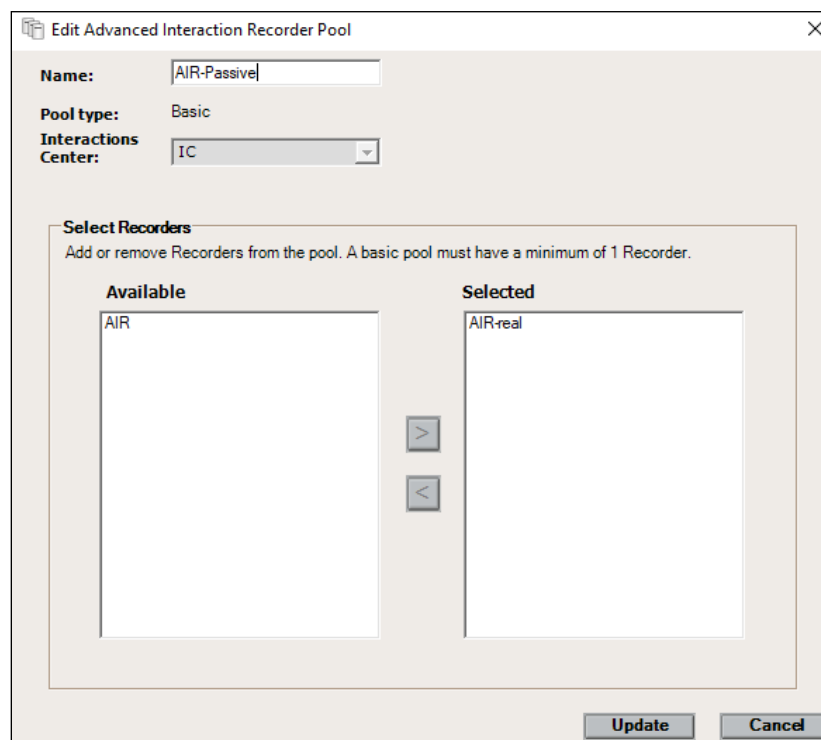

## 7.2. System Mapping

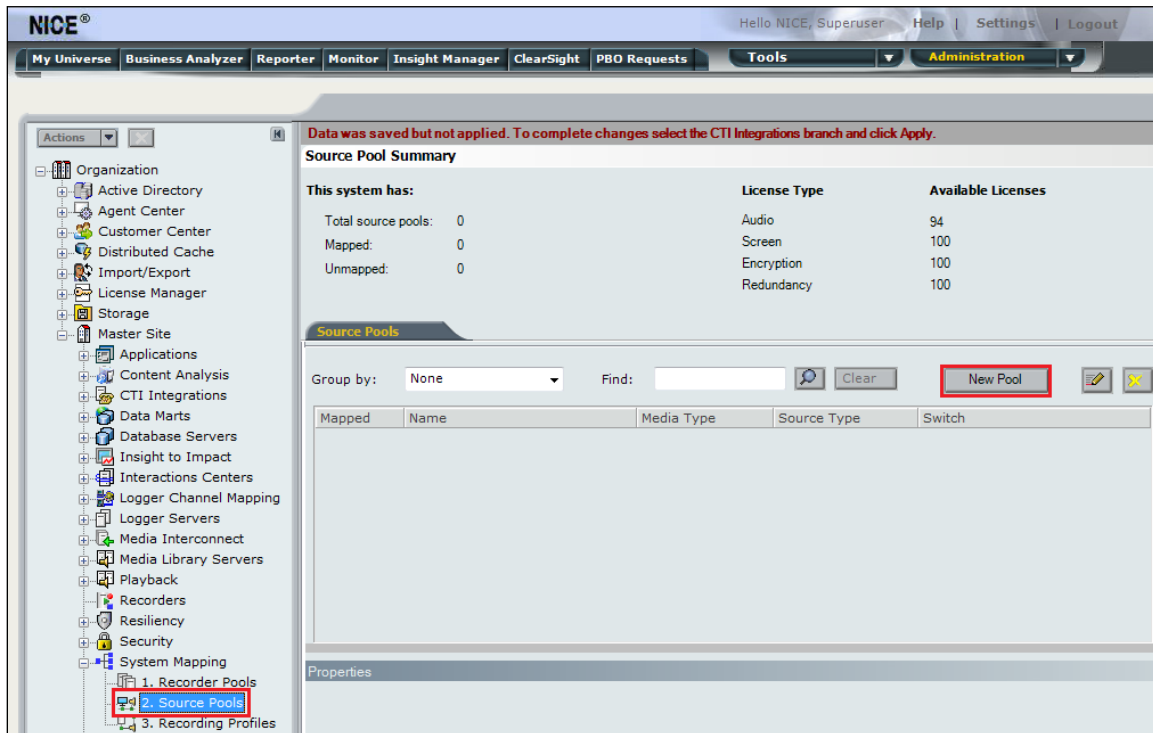

From the web browser navigate to **Master Site** → **System Mapping** → **Recorder Pools**. In the main window click on **New Pool**.

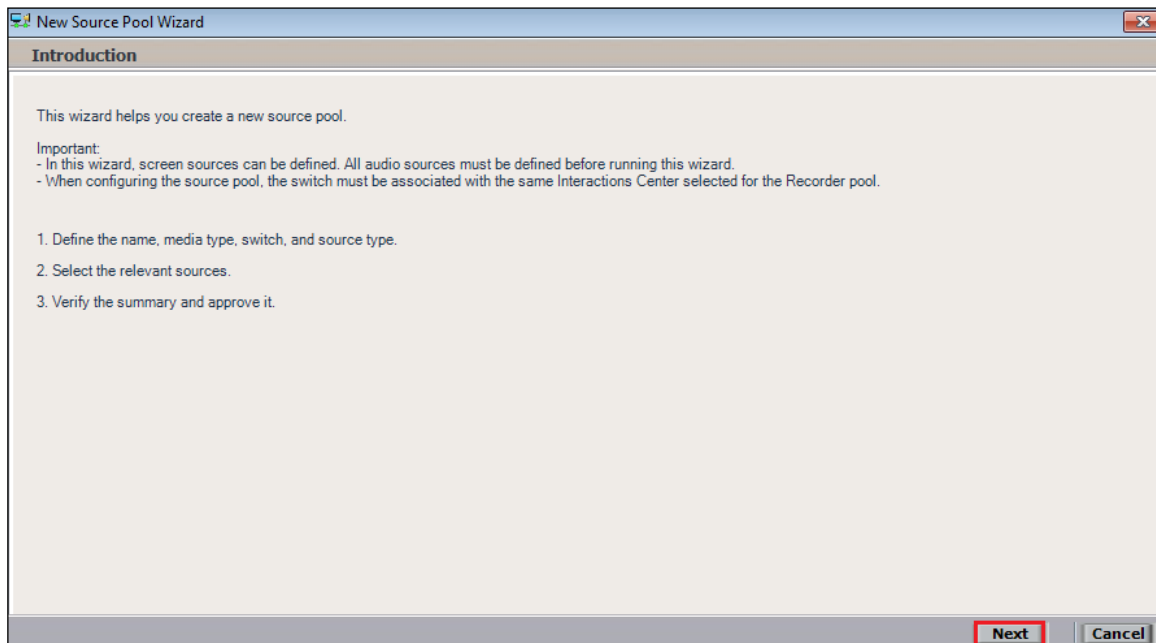

Enter a suitable **Name** for the **Recorder Pool** and select the **AIR-real** from the list of **Available Recorders** and click on **Update** to continue.

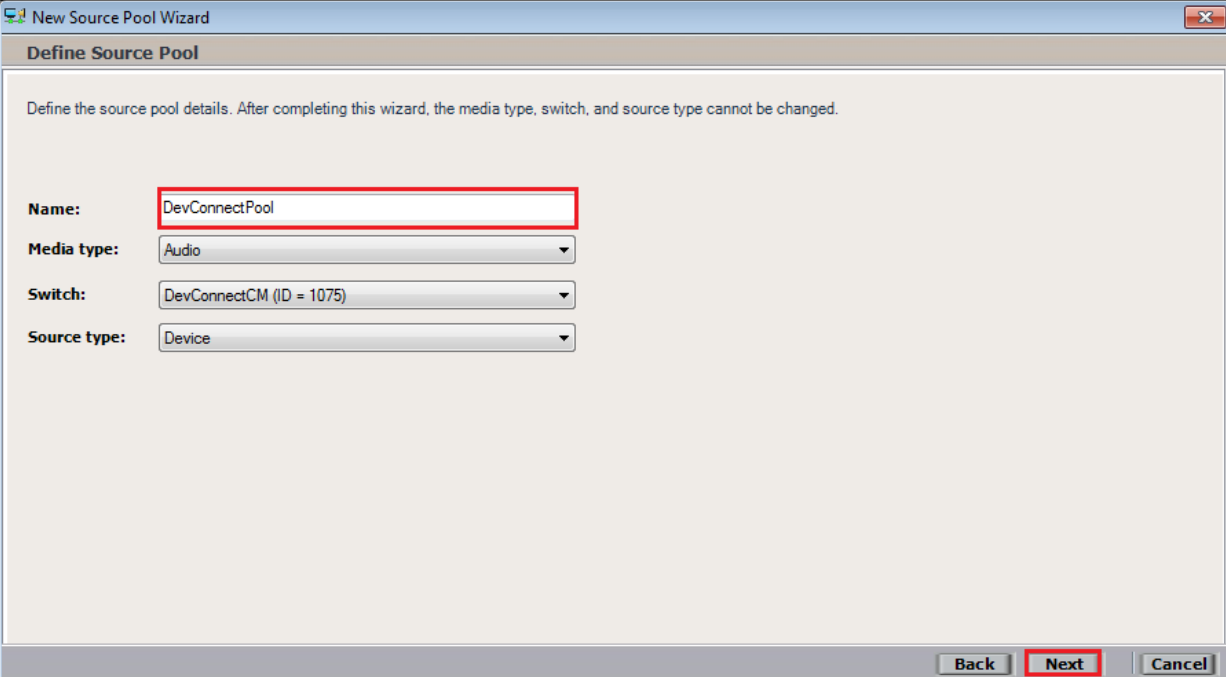

From the left navigation window select **Source Pools** and from the main window click on **New Pool**.

Click on **Next** to continue to add a new **Source Pool**.

Enter a suitable **Name** and the other values were left as default. Click on **Next** to continue.

The screenshot shows the 'Define Source Pool' step of the 'New Source Pool Wizard'. The window title is 'New Source Pool Wizard'. The subtitle is 'Define Source Pool'. Below the subtitle is a note: 'Define the source pool details. After completing this wizard, the media type, switch, and source type cannot be changed.' There are four input fields: 'Name' with the value 'DevConnectPool', 'Media type' with the value 'Audio', 'Switch' with the value 'DevConnectCM (ID = 1075)', and 'Source type' with the value 'Device'. At the bottom right, there are three buttons: 'Back', 'Next', and 'Cancel'. The 'Next' button is highlighted with a red border.

**Name:** DevConnectPool

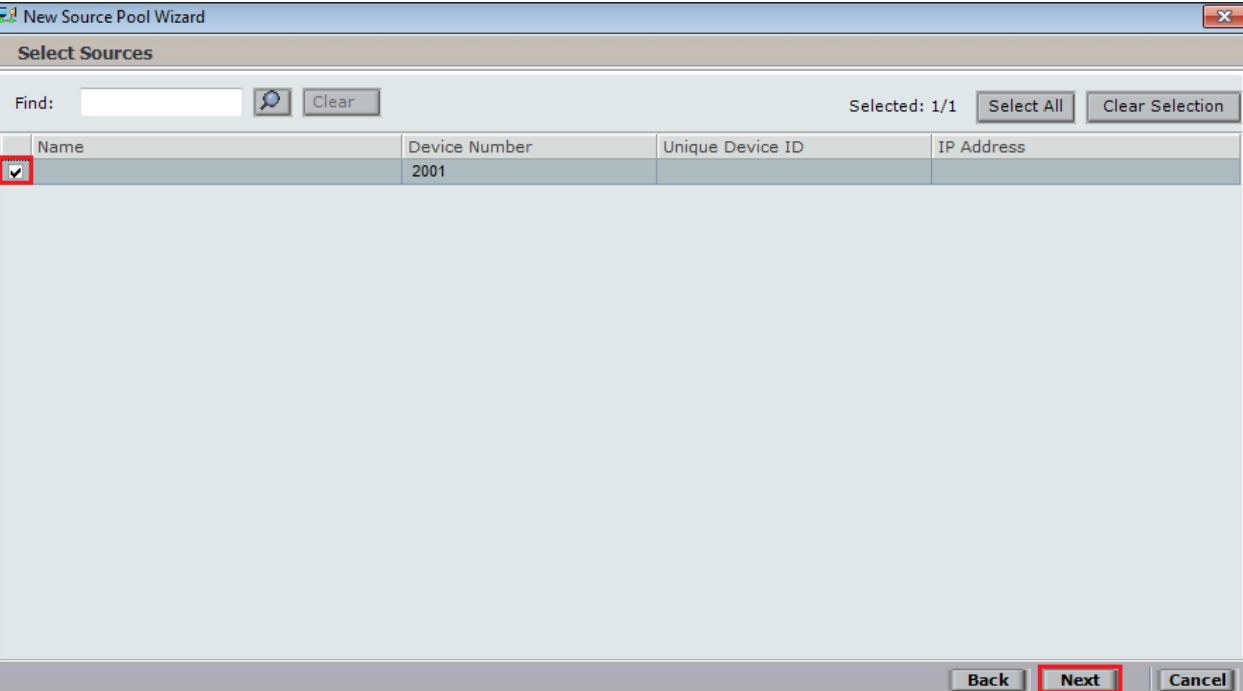

**Media type:** Audio

**Switch:** DevConnectCM (ID = 1075)

**Source type:** Device

Back Next Cancel

Select the extensions that were created in **Section 7.1**, note only one extension number is shown in the example below but this is not typical. Click on **Next** to continue.

The screenshot shows the 'Select Sources' step of the 'New Source Pool Wizard'. The window title is 'New Source Pool Wizard'. The subtitle is 'Select Sources'. There is a 'Find:' search bar with a magnifying glass icon and a 'Clear' button. To the right, it says 'Selected: 1/1' with 'Select All' and 'Clear Selection' buttons. Below this is a table with four columns: 'Name', 'Device Number', 'Unique Device ID', and 'IP Address'. The first row has a checked checkbox in the 'Name' column, and the 'Device Number' is '2001'. At the bottom right, there are three buttons: 'Back', 'Next', and 'Cancel'. The 'Next' button is highlighted with a red border.

Find: [Search Bar] Clear

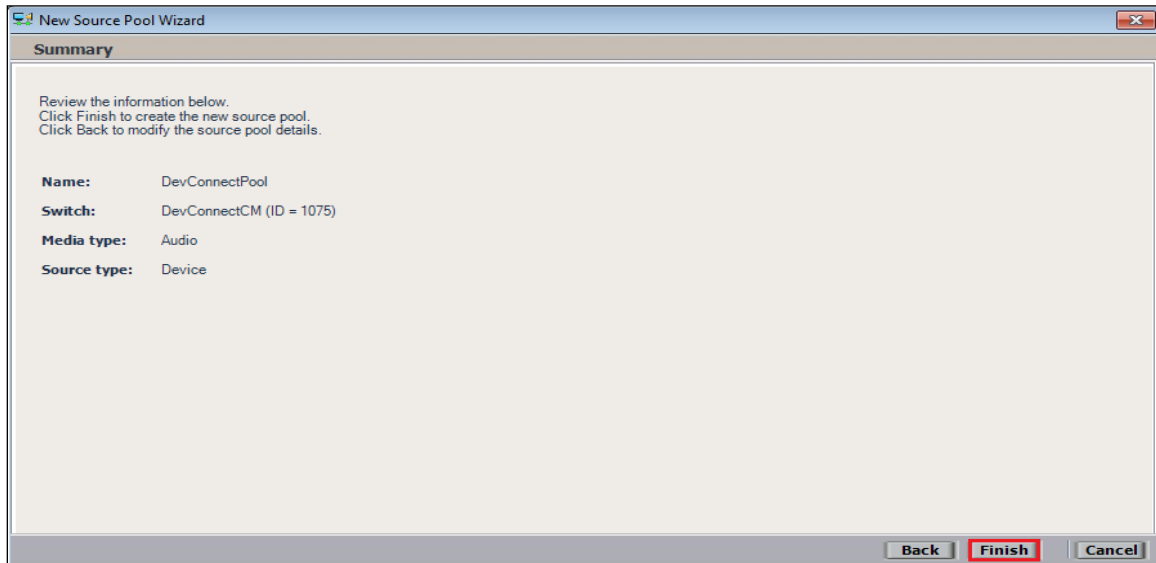

Selected: 1/1 Select All Clear Selection

Name	Device Number	Unique Device ID	IP Address
<input checked="" type="checkbox"/>	2001		

Back Next Cancel

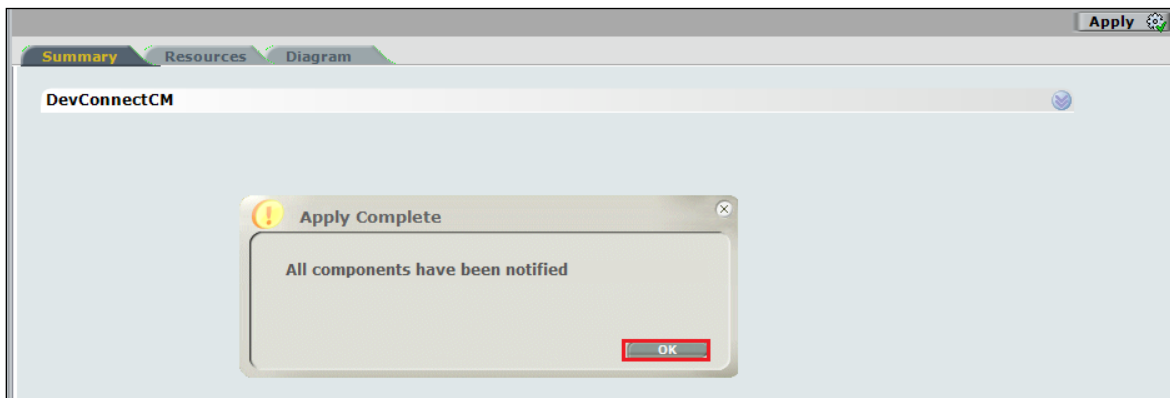

Click on **Finish** to complete the New Source Pool Wizard.

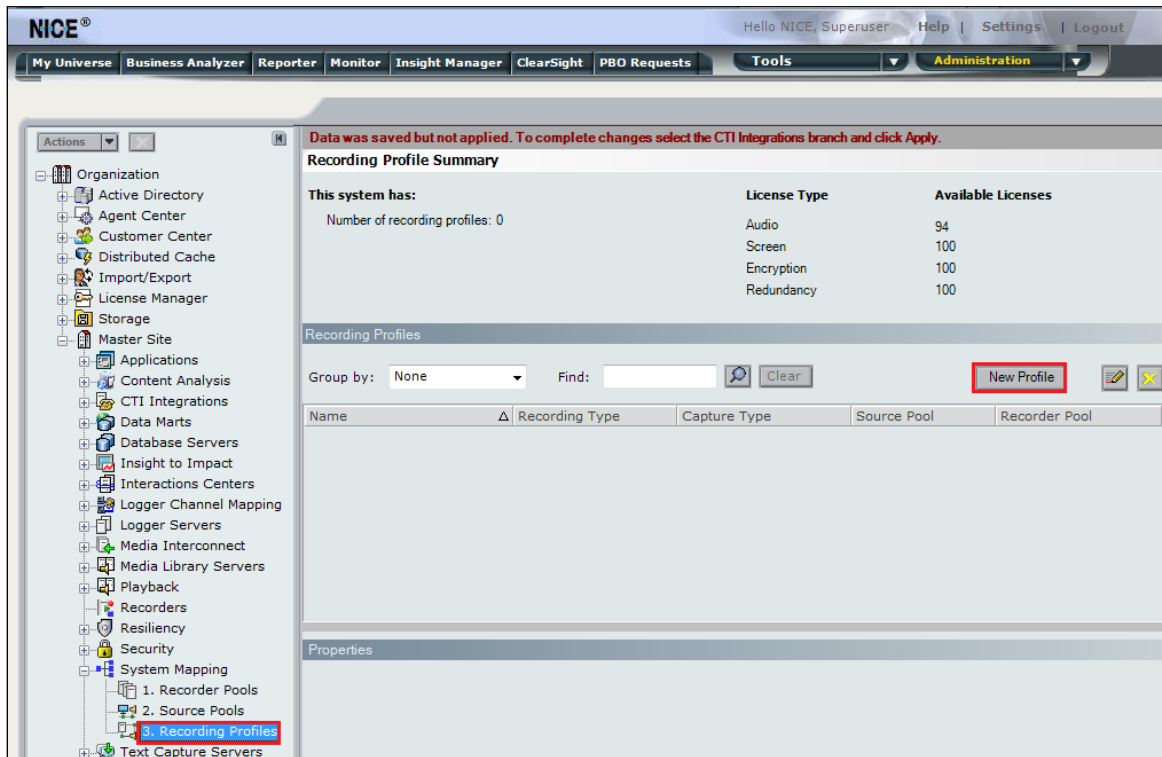

To implement these new changes, navigate to **Master Site → CTI Integrations** in the left window and in the main window click on **Apply** at the top right of the window.

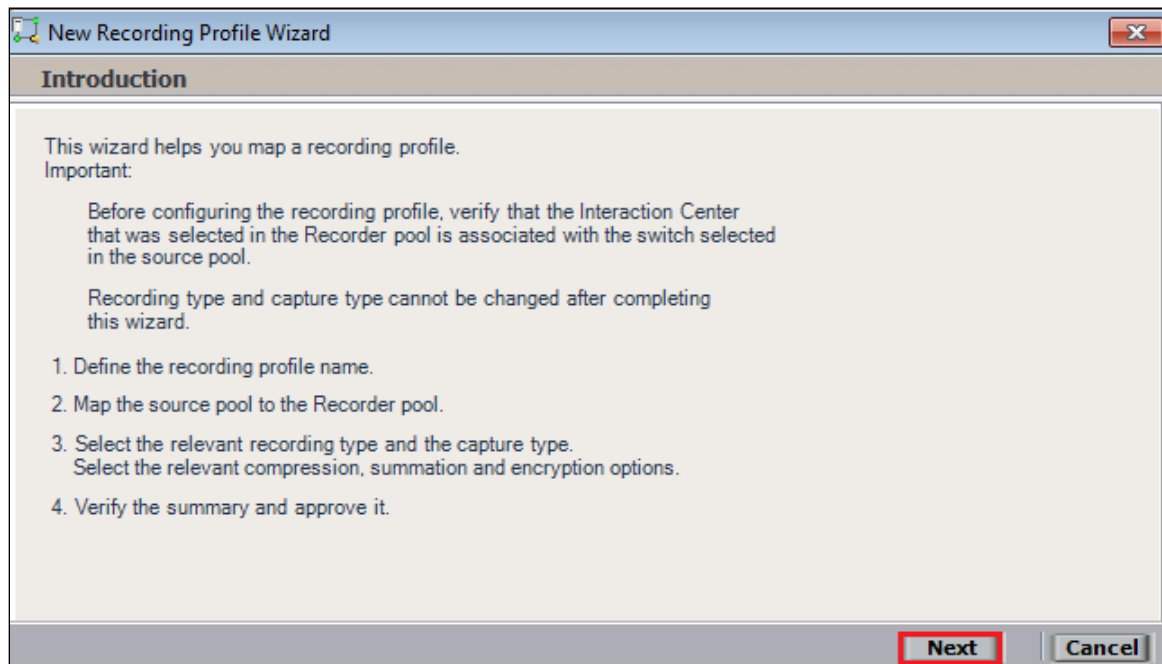

The following screen shows the changes were saved correctly. Click on **OK** to continue.

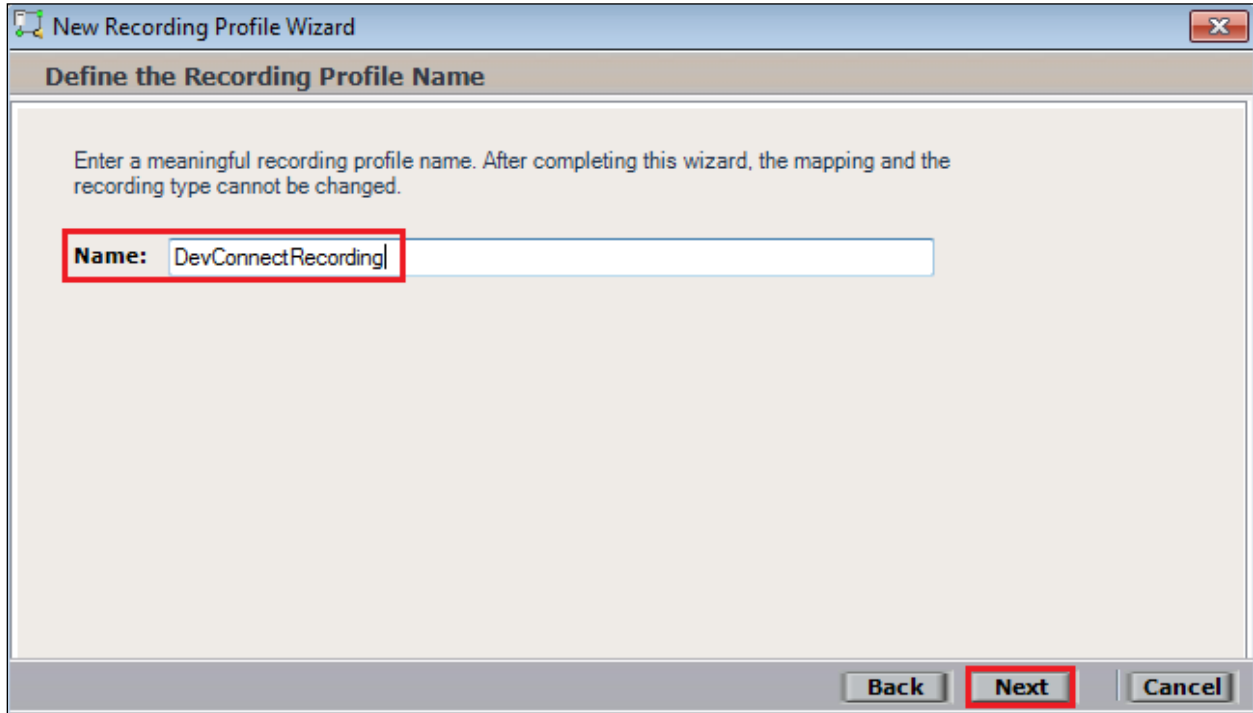

From the left window navigate to **Master Site** → **System Mapping** → **Recording Profiles** and in the main window click on **New Profile**.

Click on **Next** to continue with the **New Recording Profile Wizard**.

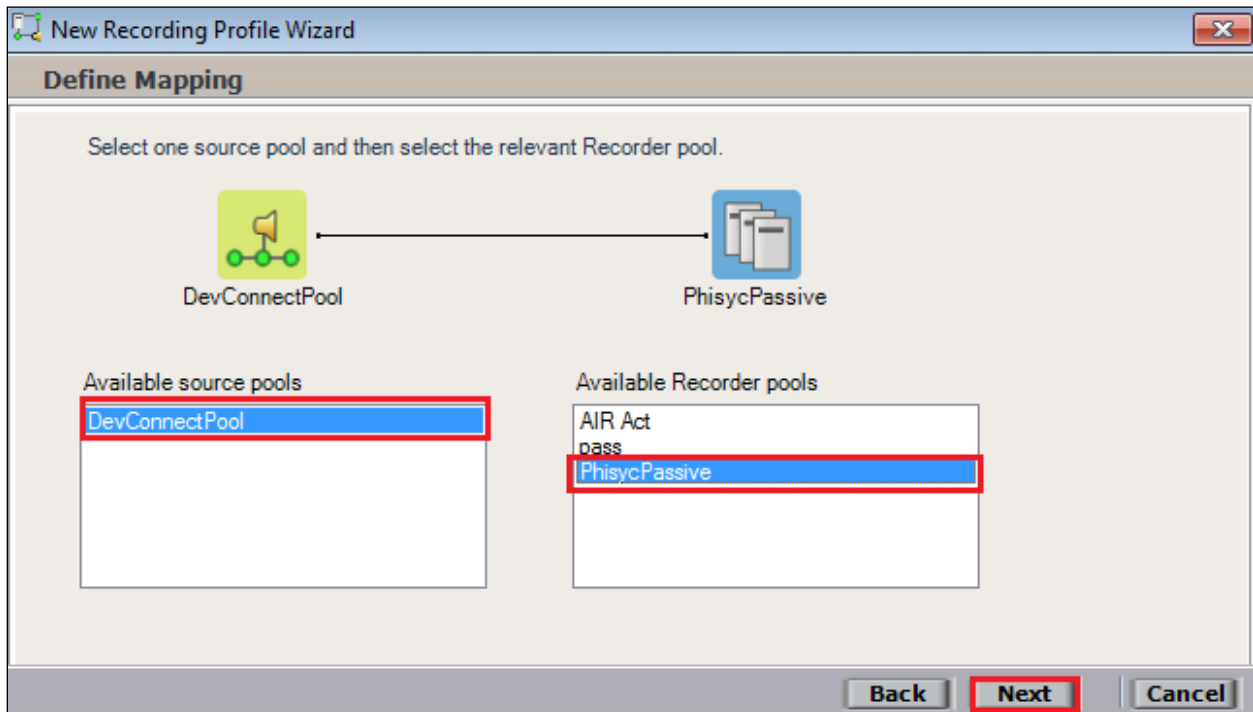

Enter a suitable **Name** for the Recording profile.

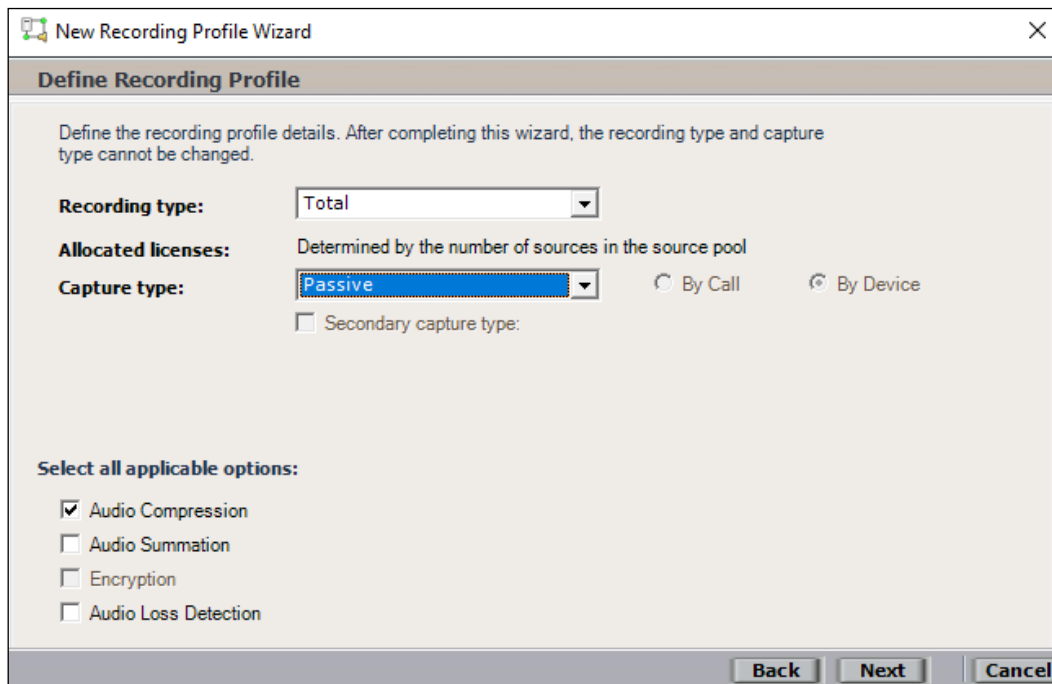

The screenshot shows the 'New Recording Profile Wizard' window, specifically the 'Define the Recording Profile Name' step. The window has a title bar with a close button. Below the title bar is a section header 'Define the Recording Profile Name'. The main area contains a text box with the instruction: 'Enter a meaningful recording profile name. After completing this wizard, the mapping and the recording type cannot be changed.' Below this is a text input field with the label 'Name:' and the text 'DevConnectRecording'. The input field is highlighted with a red border. At the bottom of the window are three buttons: 'Back', 'Next', and 'Cancel'. The 'Next' button is highlighted with a red border.

Select the correct **source pool** and **Recorder pool**, click **Next** to continue. The recorder pool below shows **Phisyc Passive**, but this should be the Recorder pool that was created above and, in this case, will be **pass**.

The screenshot shows the 'New Recording Profile Wizard' window, specifically the 'Define Mapping' step. The window has a title bar with a close button. Below the title bar is a section header 'Define Mapping'. The main area contains a text box with the instruction: 'Select one source pool and then select the relevant Recorder pool.' Below this is a diagram showing a source pool icon (a green square with a yellow circle and a green line) labeled 'DevConnectPool' and a recorder pool icon (a blue square with a white circle and a blue line) labeled 'PhisycPassive'. Below the diagram are two lists: 'Available source pools' and 'Available Recorder pools'. The 'Available source pools' list contains 'DevConnectPool' and is highlighted with a red border. The 'Available Recorder pools' list contains 'AIR Act', 'pass', and 'PhisycPassive'. The 'PhisycPassive' item is highlighted with a red border. At the bottom of the window are three buttons: 'Back', 'Next', and 'Cancel'. The 'Next' button is highlighted with a red border.

For total recording i.e., the recording of all calls, select **Total** as the **Recording type**. For **Capture type**, ensure that **Passive** is selected from the drop-down box. **Audio Compression** is selected as default and can be left like this. Click on **Next** to continue.

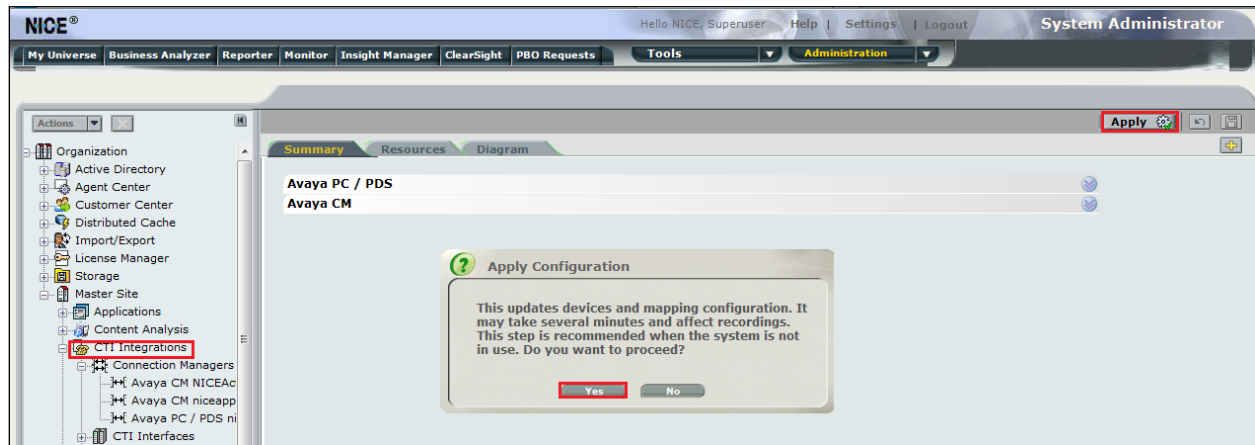

The screenshot shows the 'New Recording Profile Wizard' window, specifically the 'Define Recording Profile' step. The window title is 'New Recording Profile Wizard'. Below the title bar, the section is 'Define Recording Profile'. A note states: 'Define the recording profile details. After completing this wizard, the recording type and capture type cannot be changed.' The 'Recording type' is set to 'Total' in a dropdown menu. 'Allocated licenses' is 'Determined by the number of sources in the source pool'. The 'Capture type' is set to 'Passive' in a dropdown menu. There are radio buttons for 'By Call' (unselected) and 'By Device' (selected). A checkbox for 'Secondary capture type:' is unchecked. Under 'Select all applicable options:', there are four checkboxes: 'Audio Compression' (checked), 'Audio Summation' (unchecked), 'Encryption' (unchecked), and 'Audio Loss Detection' (unchecked). At the bottom right are 'Back', 'Next', and 'Cancel' buttons.

Click on **Finish** to complete the **New Recording Profile Wizard**. The screen below shows that for Total **Passive** recording.

The screenshot shows the 'New Recording Profile Wizard' window, specifically the 'Summary' step. The window title is 'New Recording Profile Wizard'. Below the title bar, the section is 'Summary'. A note states: 'Review the mapping information below. Click Finish to create the new recording profile. Click Back to modify the recording profile details.' The summary lists the following details: 'Name: DevConnectPool', 'Source pool: DEV-POOL', 'Recorder pool: AIR-Passive', 'Recording type: Total', 'Capture type: Passive', and 'Allocated licenses: Determined by the number of sources in the source pool'. Under 'Select all applicable options:', there are four checkboxes: 'Audio Compression' (checked), 'Audio Summation' (unchecked), 'Encryption' (unchecked), and 'Audio Loss Detection' (unchecked). At the bottom right are 'Back', 'Finish' (highlighted with a red box), and 'Cancel' buttons.

Navigate to **Master Site** → **CTI Integrations** and from the main window click on **Apply**. Click on **Yes** to proceed.

This concludes the setup of the NICE Application Server for Passive Station Side VoIP SMS recording.

## 8. Verification Steps

This section provides the steps that can be taken to verify correct configuration of the NICE Engage Platform, Avaya Aura® Communication Manager, and Avaya Aura® Application Enablement Services.

### 8.1. Verify Avaya Aura® Communication Manager CTI Service State

Before the connection between the NICE Engage Platform and the AES is checked, check the connection between Communication Manager and AES to ensure it is functioning correctly. Check the AESVCS link status by using the command **status aescvs cti-link**. Verify the **Service State** of the CTI link is **established**.

status aescvs cti-link						
AE SERVICES CTI LINK STATUS						
CTI Link	Version	Mnt Busy	AE Services Server	Service State	Msgs Sent	Msgs Rcvd
1	12	no	aespri101x	established	865	865

### 8.2. Verify TSAPI Link

On the AES Management Console verify the status of the TSAPI link by selecting **Status → Status and Control → TSAPI Service Summary** to display the **TSAPI Link Details** screen. Verify the status of the TSAPI link by checking that the **Status** is **Talking** and the **State** is **Online**.

Status | Status and Control | TSAPI Service SummaryHome | Help | Logout

### 8.2.1. Verify SMS link

Open a web page to <https://<AESIP>/sms/sms-test.php>, as shown below. Enter the Communication Manager login details and a **Request**, such as List Agent, is entered as shown below, this should return a **Response** as shown.

```

### 8.3. Verify Calls are being Recorded

From any of the monitored Avaya endpoints make a series of inbound and outbound calls. Once these calls are completed, they should be available for playback through a web browser to the NICE Application Server.

Open a browser session to the NICE Application Server as is shown below. Enter the proper credentials and click on **Login**.

## 8.4. Verify NICE Services

If these recordings are not present or cannot be played back, the NICE services may not be running or may need to be restarted. There are two separate servers as a part of this NICE Engage Platform. The NICE Application Server and the NICE Passive Logger, both servers can be logged into and checked to ensure all services beginning with NICE are running correctly. As a last resort both servers may need a reboot after the initial configuration.

## 9. Conclusion

These Application Notes describe the configuration steps required for NICE Engage Platform R7.3 to successfully interoperate with Avaya Aura® Communication Manager R10.1 using Avaya Aura® Application Enablement Services R10.1 to connect to using Passive Station-Side VoIP with SMS to record calls. All feature functionality and serviceability test cases were completed successfully with no issues or observations noted in **Section 2.2**.
