---

# **Application Notes for Configuring Westell Interchange Convergence Switch3 with Avaya Communication Manager – Issue 1.0**

### **Abstract**

These Application Notes describe the configuration steps required for the Westell Interchange Convergence Switch3 (ICS3) to interoperate with Avaya Communication Manager. The ICS3 serves as a gateway between a traditional PBX with a Digital Private Network Signalling System (DPNSS) interface and a IP-based PBX with a Q.931/QSIG interface. All calls to and from a legacy DPNSS PBX are routed via the ICS3 gateway to Avaya Communication Manager.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

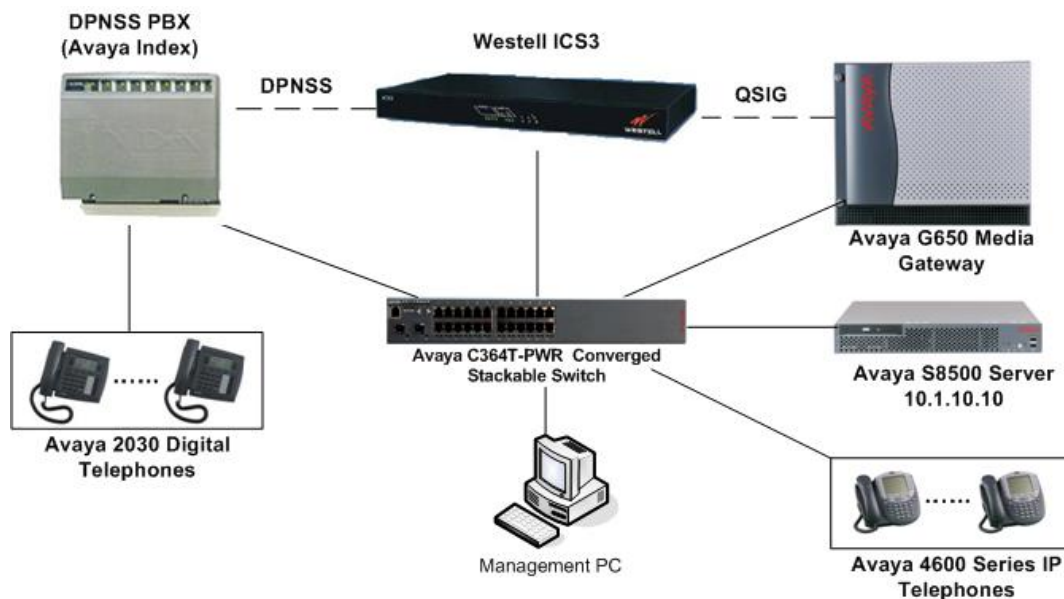

# 1. Introduction

These Application Notes describe a compliance-tested configuration consisting of a ICS3 gateway networked with Avaya Communication Manager via a QSIG trunk.

The ICS3 is a DPNSS/QSIG gateway. ICS3 connects via DPNSS trunk to traditional PBX and connects via a QSIG trunk to Avaya Communication Manager. All calls to and from a traditional DPNSS PBX are routed via the ICS3 gateway to Avaya Communication Manager. The following DPNSS and QSIG supplementary services were tested.

- Basic Call
- Call Hold /Retrieve
- Call Forward Busy/No answer/All
- Calling Name Display
- Call Transfer Attended
- Call Transfer Unattended
- Conference
- Call Waiting

In **Figure 1**, Avaya Communication Manager runs on the Avaya S8500 Server. The solution described herein is also extensible to other Avaya Servers and Media Gateways. The Avaya G650 Media Gateway is connected to the ICS3 via a QSIG trunk. The ICS3 in turn connects to the traditional PBX via a DPNSS trunk. During compliance testing an Avaya INdEx was used to provide the DPNSS connection to the ICS3. Configuration of the Avaya INdEx is not included in these Application Notes and the PBX providing the DPNSS connection will be referred to as the DPNSS PBX .

**Figure 1:** Network Diagram of the Compliance Tested Configuration

## 2. Equipment and Software Validated

Equipment	Software
Avaya S8500B Server	Avaya Communication Manager 5.0 (R015x.00.0.825.4), patch 15175
Avaya G650 Media Gateway C-LAN TN799DP Medpro TN2302AP	HW 1, FW24 HW 20, FW116
Avaya C364T-PWR Converged Stackable Switch	4.3.12
Avaya 4600 Series IP Telephones (H.323)	2.8
Avaya INdEx	11.0
Westell Interchange Convergence Switch3 (ICS3)	IPH-DP-QS 1-0-0

## 3. Configure Avaya Communication Manager

Initial configuration of Avaya Communication Manager is beyond the scope of these Application Notes. See Section 9 for Avaya documentation references. This section illustrates the configuration of the DS1 board, QSIG trunk and signalling group, AAR analysis, and route patterns used in the compliance-tested configuration. The steps are performed from the System Access Terminal (SAT) interface.

Step	Description
1.	<p>On Page 4 of the <b>System-Parameters Customer-Options</b> form, verify that the <b>ISDN-PRI</b> is set to “y”.</p> <pre> display system-parameters customer-options                                 Page 4 of 10                                 OPTIONAL FEATURES  Emergency Access to Attendant? y                IP Stations? y   Enable 'dadmin' Login? y   Enhanced Conferencing? n                      ISDN Feature Plus? n     Enhanced EC500? y                ISDN/SIP Network Call Redirection? n Enterprise Survivable Server? n                ISDN-BRI Trunks? n   Enterprise Wide Licensing? n                      <b>ISDN-PRI? y</b>     ESS Administration? n                Local Survivable Processor? n   Extended Cvg/Fwd Admin? n                Malicious Call Trace? n   External Device Alarm Admin? n                Media Encryption Over IP? n Five Port Networks Max Per MCC? n                Mode Code for Centralized Voice Mail? n   Flexible Billing? n Forced Entry of Account Codes? n                Multifrequency Signaling? y   Global Call Classification? n                Multimedia Call Handling (Basic)? n     Hospitality (Basic)? y                Multimedia Call Handling (Enhanced)? n Hospitality (G3V3 Enhancements)? n                Multimedia IP SIP Trunking? n                                 IP Trunks? Y </pre>

Step	Description
2.	<p data-bbox="277 233 1438 302">On Page 8 of the <b>System-Parameters Customer-Options</b> form, verify that the <b>Basic Call Setup</b> and <b>Basic Supplementary Services</b> is set to “y”.</p> <div data-bbox="277 338 1455 611"> <pre> display system-parameters customer-options                                 Page    8 of 10                                 QSIG OPTIONAL FEATURES                                  Basic Call Setup? y                                 Basic Supplementary Services? y                                 Centralized Attendant? n                                 Interworking with DCS? n                                 Supplementary Services with Rerouting? n                                 Transfer into QSIG Voice Mail? n                                 Value-Added (VALU)? n </pre> </div>
3.	<p data-bbox="277 648 1500 751">Enter <b>add ds1</b> &lt;board location&gt; command, where the board location is an available DS1 circuit pack. ## 4. Configure the ICS3

This section includes the necessary configuration steps to allow the ICS3 to network with the traditional DPNSS PBX and Avaya Communication Manager and to route calls between them.

Step	Description
1.	<p>Connect the management PC directly to the ICS3 and open a web browser and enter the following ICS3 default URL “<a href="http://192.168.1.1">http://192.168.1.1</a>”. Log in using the appropriate user name and password. Although not necessary for compliance testing it is possible to set the IP address of the ICS3 by selecting <b>Configuration → Gateway → Set IP Address</b>.</p> 

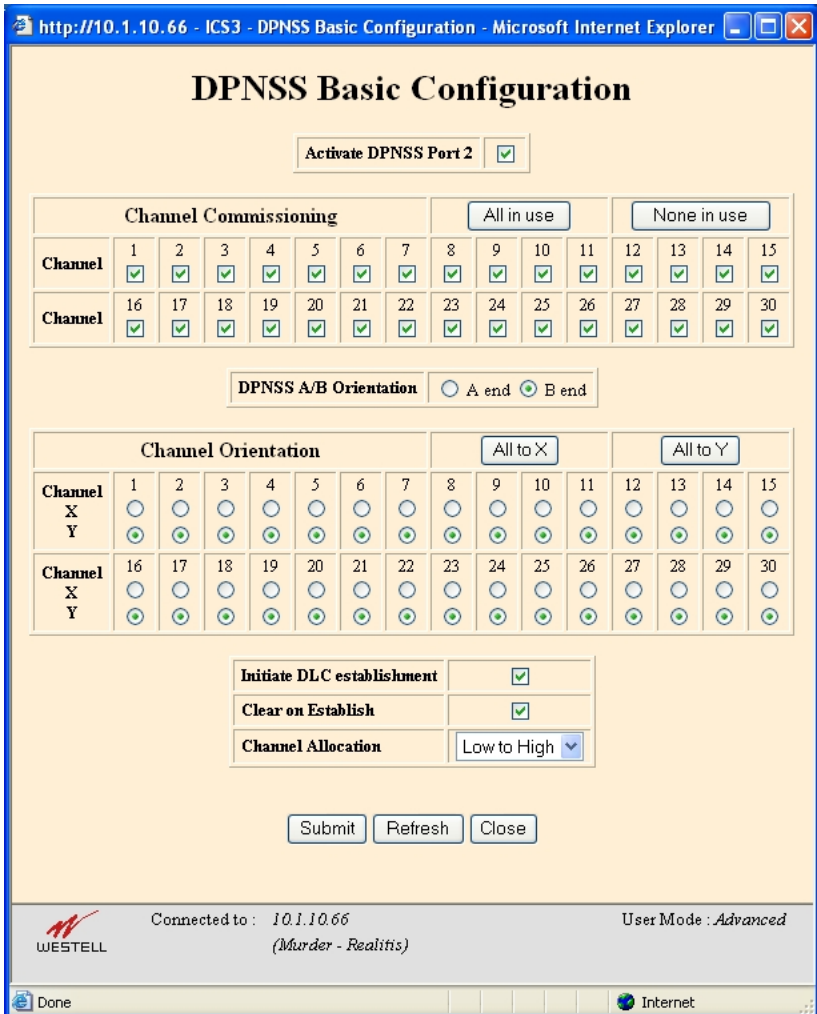

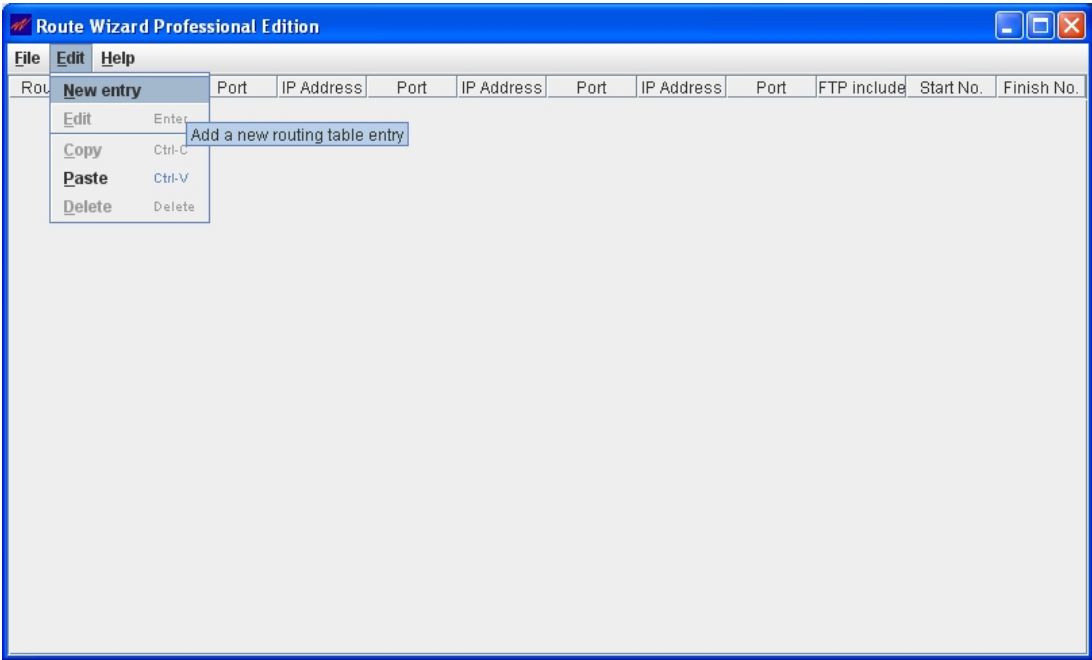

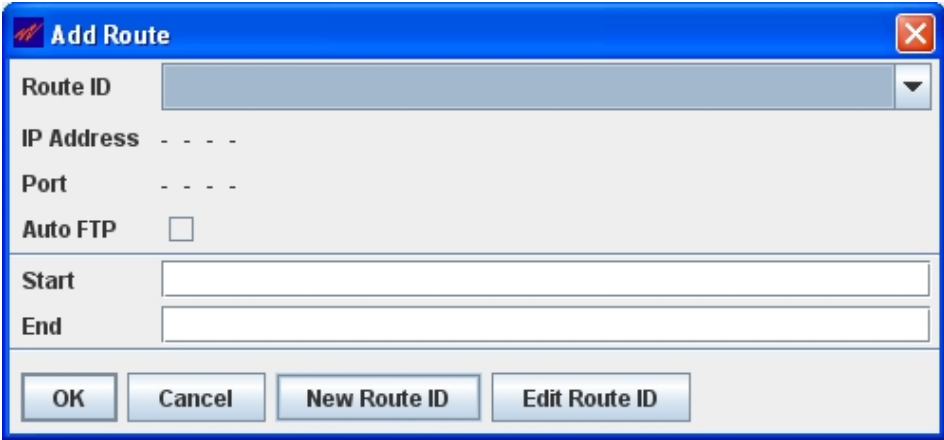

Step	Description
2.	<p>The following parameters were configured so the ICS3 could be accessible on the test network</p> <ul style="list-style-type: none"> <li>• Set Gateway Management IP Address</li> <li>• Set Gateway Management Subnet Mask</li> <li>• Set Management Default Gateway Address</li> </ul> <p>The remaining fields may be left at their default values. Click on <b>Submit</b>. To reset ICS3, from the main screen select <b>Administration → Reboot</b>.</p> 

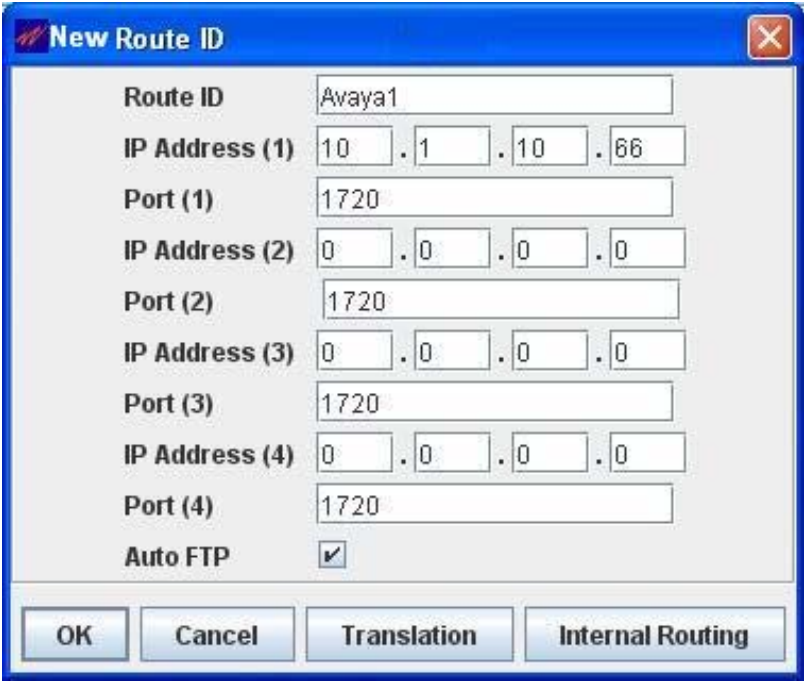

Step	Description
3.	<p>Open a web browser from the management PC connected to the test network and enter the IP address configured in the previous step as the URL. Select <b>Configuration</b> → <b>Applications</b> → <b>Avaya</b>.</p> 

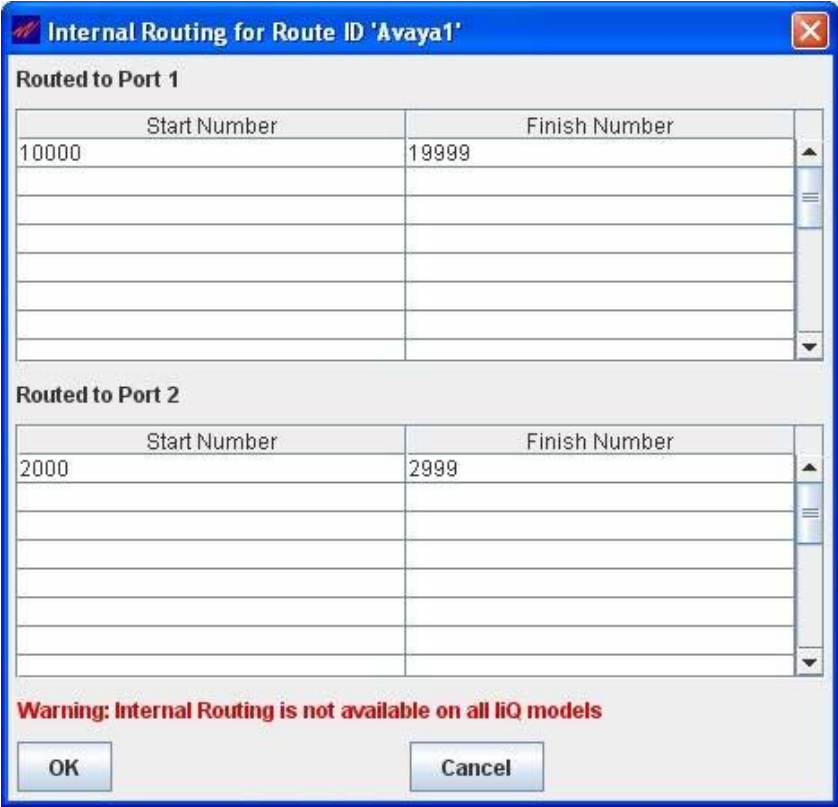

Step	Description
4.	<p>The following preset application is provided for quick configuration. Configure the following parameters to reflect the configuration of Avaya Communication Manager in Section 3 and the pre-configured DPNSS PBX as shown below. Port 2 was connected to the DPNSS PBX. Click on <b>Submit</b>.</p> 

Step	Description												
5.	<p>Select <b>Configuration → Q.931 Basic</b>. Verify the default ICS3 <b>Layer 1 Framing</b> and <b>Orientation</b> settings with the <b>CRC</b> and <b>Interface</b> settings configured for Avaya Communication Manager DS1 circuit pack in Section 3, Step 3. Verify the <b>Digit Handling(In/Out)</b> setting configured on the trunk group in Section 3, Step 5 with the <b>Overlap Signalling Support</b>. Click on <b>Close</b>.</p>  <p>The screenshot displays the 'Q.931 / QSIG Basic Configuration' web page. At the top, the browser address bar shows 'http://10.1.10.66 - ICS3 - Q.931 / QSIG Basic Configuration - Micro...'. The main content area has a title 'Q.931 / QSIG Basic Configuration' and a table of configuration options:</p> <table border="1"> <tr> <td>Activate Q.931 Port 1</td> <td><input checked="" type="checkbox"/></td> </tr> <tr> <td>Layer 1 Framing</td> <td>CRC4</td> </tr> <tr> <td>Orientation</td> <td>User</td> </tr> <tr> <td>Initiate Link Establishment</td> <td>Immediately</td> </tr> <tr> <td>Action on Layer 2 Reset</td> <td>Status</td> </tr> <tr> <td>Overlap Signalling Support</td> <td>Both Ways</td> </tr> </table> <p>Below the table are three buttons: 'Submit', 'Refresh', and 'Close'. The footer of the page includes the Westell logo, the text 'Connected to : 10.1.10.66 (Murder - Realitis)', and 'User Mode : Advanced'. At the very bottom, there is a status bar with 'Done' and 'Internet' icons.</p>	Activate Q.931 Port 1	<input checked="" type="checkbox"/>	Layer 1 Framing	CRC4	Orientation	User	Initiate Link Establishment	Immediately	Action on Layer 2 Reset	Status	Overlap Signalling Support	Both Ways
Activate Q.931 Port 1	<input checked="" type="checkbox"/>												
Layer 1 Framing	CRC4												
Orientation	User												
Initiate Link Establishment	Immediately												
Action on Layer 2 Reset	Status												
Overlap Signalling Support	Both Ways												

Step	Description
6.	<p>Select <b>Configuration → DPNSS Basic</b>. The screen below shows the ICS3 DPNSS basic settings no changes were made to the DPNSS basic configuration settings. Note: The DPNSS PBX was pre-configured with signalling channel set as “A” and the frame format set as Double Frame (DF). Click on <b>Close</b>.</p> 

Step	Description
7.	<p>The routing of calls between the DPNSS PBX and Avaya Communication Manager is done via the Route Wizard application. On the management PC, click on the Route Wizard application icon located on the desktop. From the tool bar select <b>Edit → New Entry</b>.</p> 
8.	<p>In the <b>Add Route</b> dialog box click on <b>New Route ID</b>.</p> 

Step	Description
9.	<p>Enter a descriptive name in the Route ID field. Enter the ICS3 IP address configured in Step 2 in the IP Address (1) field. The remaining fields may be left at their default values. Click on <b>Internal Routing</b>.</p> 

Step	Description
10.	<p>For calls to be <b>Routed to Port 1</b> (Avaya Communication Manager), enter the telephone extension range for Avaya Communication Manager telephones in the <b>Start Number</b> and <b>Finish Number</b> fields. For calls to be <b>Routed to Port 2</b> (DPNSS PBX). Enter the telephone extension range for the DPNSS PBX telephones in the <b>Start Number</b> and <b>Finish Number</b> fields. Click <b>OK</b>.</p> 
11.	<p>Click <b>OK</b> on the New Route ID and the Add Route dialog box. From the tool bar select <b>File → Save routing tables as</b>. Select an appropriate name and location for the routing tables to be saved. A batch file is created along with the following 3 configuration files.</p> <ul style="list-style-type: none"> <li>• IP Route ID table Configuration File</li> <li>• Internal Route ID Table Configuration File</li> <li>• IP Address Table Configuration File</li> </ul> <p>Double click to execute the batch file. The batch file upon execution will upload the 3 configuration files to ICS3.</p>

## **5. Interoperability Compliance Testing**

The interoperability compliance testing focused on verifying the ICS3, DPNSS connection to the DPNSS PBX and the QSIG connection to Avaya Communication Manager, and testing the DPNSS PBX and Avaya Communication Manager end to end basic calls and supplementary services via the ICS3.

### **5.1. General Test Approach**

The general approach was to place inbound and outbound calls and test supplementary services to and from the DPNSS PBX through the ICS3 and verify successful call completion. The following DPNSS and QSIG supplementary services were tested.

- Basic Call
- Call Hold /Retrieve
- Call Forward Busy/No answer/All
- Calling Name Display
- Call Transfer Attended
- Call Transfer Unattended
- Conference
- Call Waiting

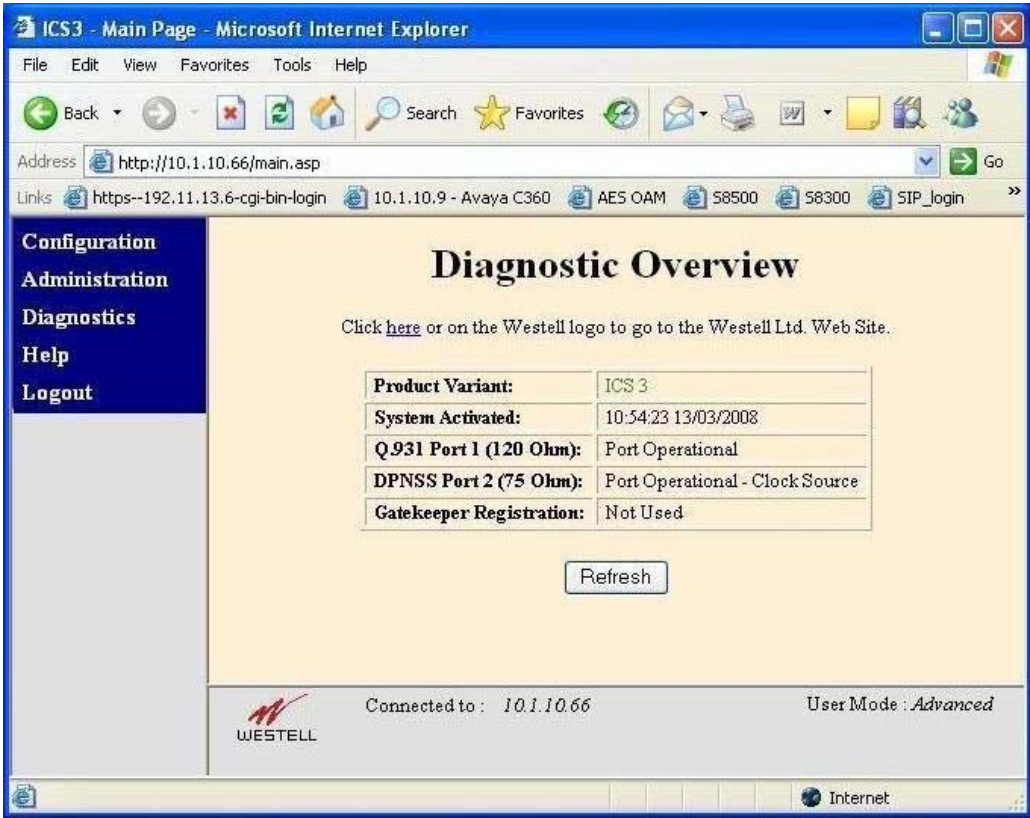

Serviceability tests were carried out by disconnecting the DPNSS link and then QSIG link.

### **5.2. Test Results**

All tests passed successfully.

## 6. Verification Steps

This section provides the tests that can be performed to verify proper configuration of Avaya Communication Manager and ICS3.

Step	Description
1.	<p>From the SAT, enter the command <b>status signaling-group s</b>, where s is the number of a signaling group configured in Section 3, Step 7, and verify that the Group State is “in service”.</p> <p>From the SAT, enter the command <b>status trunk-group t</b>, where t is the number of a trunk group configured in Section 3, Step 4, and verify that the Service States of all trunks are “in-service/idle” or “in-service/active”.</p>
2.	<p>Verify that ICS3 is operational by selecting Diagnostic. On Diagnostic Over view page verify both Q.931 Port1(120 Ohm) and DPNSS Port 2 (75 Ohm) are operational.</p>
